

Open Access Publishing Options for Authors in *Animal*

Cambridge and the *Animal* Consortium offer Authors and Readers a full range of options when it comes to publishing and accessing content. Our standard copyright policy allows Open Access Archiving (for instance posting the Accepted Manuscript in an Institutional Repository or on a personal webpage). Authors can also choose to publish Open Access (making articles freely available for non-commercial use) in our Journals by using Cambridge Open Option.

Open Access Mandates

A number of funding agencies and institutions now mandate Open Access publication of work which they support. We are fully compliant with the requirements of NIH, The Wellcome Trust, UKRC, HHMI and many others.

SHERPA RoMEO

SHERPA RoMEO is a listing of publishers' policies towards Open Access Archiving, with publishers ranked by colour depending on the rights they grant to authors. We support both Gold Open Access and Green Open Access. Gold Open Access is supported via Cambridge Open Option. Green Open Access is covered by the vast majority of our standard Copyright forms which automatically allow our authors to archive their articles in institutional repositories, on personal webpages and in subject repositories such as PubMed Central (PMC).

Cambridge Open Option

Cambridge Open Option is a scheme allowing authors, for a one-off charge, to make their article freely available to everyone on publication online; it reflects Cambridge's commitment to further the dissemination of published academic information.

Wide Dissemination

Cambridge is committed to wide dissemination of work published in its Journals. To this end we support a number of schemes allowing free, or discounted, access to our Journals in developing countries. We participate in the AGORA, HINARI, INASP and OARE initiatives, as well as the Association of Commonwealth Universities and the Eastern and Central Europe Journals Donation Projects.

In addition to our Open Access programme a large amount of our content is made free and publicly available. A full list of free content can be found by visiting <http://journals.cambridge.org/action/browseFreeContent>

What can I do with my Article?

ALL ARTICLES

On Acceptance

You may post the Accepted Manuscript on your Personal Webpages or Departmental Webpages, in an Institutional Repository, or in a Subject Repository such as PubMedCentral, providing it is accompanied by:

- a prominent statement that it has been accepted for publication in the Journal,
- a copyright notice in the name of the copyright holder (Cambridge University Press or the sponsoring Society as appropriate)
- a link to the Journal's homepage on Cambridge Journals Online

Following publication the full bibliographic details of the paper must be inserted after the Journal Title.

On Publication

You may post the Version of Record (e.g. the final PDF after it has been copyedited and typeset by Cambridge University Press) on your Personal Webpages or Departmental Webpages or Institutional Repository providing it is accompanied by:

- a notice that it has been published in the Journal, with full bibliographic details
- a copyright notice in the name of the copyright holder (Cambridge University Press or the sponsoring Society as appropriate)
- a link to the Journal's homepage on Cambridge Journals Online.

You may also:

- make hard copies of the contribution, or an adapted version, for your own purposes (e.g. copies for teaching use) provided no sale is involved.
- reproduce the paper, or an adapted version, in any volume of which you are editor or author. Permission will automatically be given to the publisher of such a volume subject to normal acknowledgement.

12 Months after Publication

You may post the Version of Record in a Subject Repository providing it is accompanied by:

- a notice that it has been published in the Journal, with full bibliographic details
- a copyright notice in the name of the copyright holder (Cambridge University Press or the sponsoring Society as appropriate)
- a link to the Journal's homepage on Cambridge Journals Online.

The Version of Record may be viewed, downloaded and used by anyone without additional charge for personal and non-commercial use provided the author and the original source are properly acknowledged.

NIH funded research and Open Access in Cambridge Journals

National Institutes of Health, "Revised policy on enhancing public access to archived publications resulting from NIH-funded research"
(NIH Guide Notice NOT-OD-08-033)

NEW REQUIREMENTS

1. From 7 April 2008, the NIH requires that all peer-reviewed articles, wholly or partially deriving from NIH funds, must be submitted to PubMed Central (PMC) upon acceptance for publication.
2. Authors must ensure that the copyright transfer agreements that they sign with a journal publisher must allow them to make the manuscript held in the PMC archive freely available within 12 months of publication of the article.

HOW TO COMPLY WITH CAMBRIDGE JOURNALS

- a. The Cambridge Journals' standard transfer of copyright agreement allows authors to place a copy of their Accepted Manuscript in a variety of places, including PMC
- b. Cambridge Journals allow the PMC archive record to be made freely available under embargo of 12 months, post-publication

- c. If you are funded by NIH, The Wellcome Trust, UKRC, HHMI and many other agencies, Cambridge Journals are fully compliant with the respective requirements of these organisations (for further details see the SHERPA/RoMEO website).
- d. Cambridge is listed as a 'Green' publisher in the SHERPA/RoMEO database of publishers' copyright and self-archiving policies (for further details see the SHERPA/RoMEO website).
- e. A number of Cambridge Journals offer authors the ability to publish their articles under an Open Access model.

For a more detailed explanation of our policies on Open Access Archiving please see the next page.

Open Access Archive Policy

CAMBRIDGE UNIVERSITY PRESS'S POLICY ON OPEN ACCESS ARCHIVING

Most Cambridge journals allow you to archive a copy of your Accepted Manuscript in a variety of places, including your personal web site, and your institution's repository. In addition, you have the right to deposit a copy in a subject-based repository, such as PubMed Central (PMC).

If you are funded by NIH, The Wellcome Trust, UKRC, HHMI and many other agencies, you will be pleased to know that publication in Cambridge Journals is fully compliant with the respective requirements of these organisations. As a result of these and other rights Cambridge is listed as a 'Green' publisher in the SHERPA/RoMEO database of publishers' copyright policies and self-archiving (see <http://www.sherpa.ac.uk/romeo/> for further details). A summary of these conditions (from the SHERPA/RoMEO site) follows.

Authors retain the following rights and conditions (as detailed on SHERPA/RoMEO website):

1. To post a copy of the Accepted Manuscript on author's personal or departmental web page or institutional repository
2. Author's version of manuscript may be deposited immediately upon acceptance
3. To post a copy of the pre-print to record acceptance for publication
4. Publisher copyright and source must be acknowledged
5. Must link to publisher version
6. Publisher's Version of Record/PDF may be used on authors' personal or departmental web pages any time after publication
7. Publisher's Version of Record/PDF may be used in an institutional repository after 12 month embargo
8. Articles in some journals can be made Open Access on payment of additional charge

If funding agency rules apply, authors may post the published Version of Record in PubMed Central (PMC) 12 months after publication or use Cambridge Open Option.

If you prefer to take up the Cambridge Open Option by publishing your article immediately as Open Access, Cambridge offers this on payment of a one-off charge. Most funders permit this as an allowable cost within grants. Check your funder's policies for details.

Cambridge Open Option

Cambridge University Press allows authors the option to make their articles freely available to everyone, immediately on publication. This service reflects Cambridge's commitment to further the dissemination of published academic information.

By making articles freely available to anyone:

1. Users will have access to the full article, without access restriction, and may download a PDF copy for their own personal, non-commercial use.
2. Freely available articles will maximise the dissemination of knowledge, and further research goals by providing that knowledge to all interested parties.
3. Authors who choose to pay to make their articles freely available will continue to receive the benefits of publishing in Cambridge Journals they already experience; the same high standards of publishing will be unchanged.

All articles will continue to be handled in the same way with peer-review, professional production and online distribution in Cambridge Journals Online. Articles will be included in the relevant Abstracting & Indexing services, and can have supplementary content (text, video or audio) added to their online versions.

HOW CAMBRIDGE OPEN OPTION WORKS

Once their paper has been accepted for publication, authors can choose whether or not to make it freely available to everyone on publication via our online platform, Cambridge Journals Online.

In this way, all of the editorial decision processes are maintained in a neutral way. The journal's editor and reviewers will not know that the paper is to be included in the program. Papers will continue to be made available in both print and online versions; the only difference is that Open Access articles will be freely available online. Anyone with internet links will be able to read the Open Access articles without charge.

In order to provide this service the author, or their institution or funding body, pays a fee towards costs associated with the publication process, from peer-review of the submitted manuscript, through the copy-editing and typesetting, to online-hosting of the definitive version of the published article. The cost of the printed version is not included in this fee and will be covered by Cambridge.

If colour is desired to be included in the printed version, a separate colour charge would apply, as is the case normally.

The single Open Access Publishing charge will ensure permanent archiving by both Cambridge University Press and the author, and allows anyone else to view, search, download archive for personal and non-commercial use. The condition for this is that the author and original source are properly acknowledged.

CAMBRIDGE OPEN OPTION FAQs

If you have a question concerning Cambridge Open Option please email gswanson@cambridge.org

1. What is the charge?

The charge applied for each article is £1500 / \$2700. This covers some of the costs associated with the publication process, from peer-review of the submitted manuscript, through the copy-editing and typesetting, to online-hosting of the definitive version of the published article. The costs associated with producing printed issues are not included.

2. When do I have to decide to make my article Open Access?

You may make this decision at any time; we ask that you inform the Journal Editor of the journal at the time your article is accepted. You will be given this option at that time.

3. How will readers know which articles are Open Access?

In the tables of contents in the online and print versions of the journal each Open Access article is clearly labelled as such.

4. Do other charges (page, colour) apply in addition to the OA charge?

These charges apply only for the printed issues, depending on whether the journal applies them.

5. How will the Open Access articles affect subscription prices?

Uptake will be monitored and future subscription prices of the online version will be modified to take into account the level of interest and uptake in this model.

Open Access Glossary

Accepted Manuscript

The version of an article that has been accepted for publication. The manuscript has been submitted, peer-reviewed, revised and represents the final version as prepared by the author. Changes may be made subsequently by the publisher by copy-editing, typesetting and proofing before the definitive Version of Record is published.

AGORA

Set up by the Food and Agriculture Organization of the UN (FAO) together with major publishers, enables developing countries to gain access to a collection in the fields of food, agriculture, environmental science and related social sciences. 1278 journals are available to institutions in 107 countries. Cambridge participates in AGORA. <http://www.aginternetwork.org/en/>

Creative Commons

Creative Commons is a non-profit organization devoted to expanding the range of creative works available for others to build upon legally and to share. The organization has released several copyright licenses known as Creative Commons licenses. These licenses allow creators to communicate which rights they reserve, and which rights they waive for the benefit of other creators. <http://creativecommons.org/>

Departmental Webpages

Webpages that describe research performed within a department. These often contain individual Personal Webpages for researchers. The Version of Record can be posted here on publication following the terms and conditions of the copyright form, but not into an organised repository of published papers.

Free Access

An article (or chapter, data, or other source of information) is described as being published as Free Access when there is no charge to the user, either by subscription, one-off payment to view or other toll. The copyright-holder retains the rights to grant permissions for re-use, re-publishing if requested. Free Access can be permanent or temporary. Free Access differs from Open Access by generally restricting terms of re-use to those applied normally by the copyright holder.

Gold Open Access

See Open Access Publishing.

Green Open Access

See Open Access Archiving.

HINARI

Set up by WHO together with major publishers, enables developing countries to gain online access to collections of biomedical and health literature at low or no cost. Over 6000 journal titles are now available to health institutions in 108 countries. Cambridge participates in HINARI. <http://www.who.int/hinari/en/>

INASP

The International Network for the Availability of Scientific Publications was established by the International Council for Science to 'improve and support networking, accessing, sharing, and publishing of information in developing and transitional countries'. <http://www.inasp.info/>

Institutional Repository

See Repository

Mandate

A requirement by an Institution, funding agency or other body that applies to the published work of an author. In the terms of Open Access, mandates normally require an author to deposit a copy of either the Accepted Manuscript or the definitive, published Version of Record in a Repository in order to make that version freely available as Open Access.

OARE

Online Access to Research in the Environment (OARE) is an international public-private consortium coordinated by the United Nations Environment Programme (UNEP), Yale University, and leading science and technology publishers, enables developing countries to gain access to collections of environmental science research. Over 1,300 journal titles are now available in more than 100 low-income countries. Cambridge participates in OARE. <http://www.oaresciences.org/en/>

Open Access

An article (or chapter, data, or other source of information) is described as being published as Open Access when there is no charge to the user, either by subscription, one-off payment to view or other toll. In addition, Open Access confers to the user rights that can include re-use and re-publishing as long as the original source is acknowledged and cited. Open Access is permanent. Open Access differs from Free Access by generally allowing the content to be re-used without permission.

Open Access Archiving

Also known as Green Open Access, Open Access Archiving is the route by which research content is made available as Open Access by being deposited in a Repository. The article that is made available is the author's Accepted Manuscript, which is freely available to everyone to read, and use under the terms of Open Access.

Open Access Publishing

Also known as Gold Open Access, Open Access Publishing is the route by which research content is made available as Open Access in a journal on payment of a one-off charge. The article that is made available is the definitive, published Version of Record (commonly, in PDF or HTML format) and is freely available to everyone to read, and use under the terms of Open Access.

Personal Webpages

Webpages that describe research performed by an individual. These are often part of Departmental Webpages, or may be published and maintained by an individual. The Version of Record can be posted here on publication following the terms and conditions of the copyright form, but not into an organised repository of published papers.

PubMed Central (PMC)

Repository of the National Institutes of Health. All researchers who are funded by the NIH are required to deposit a copy of any paper that results from a grant in PMC, within 12 months of publication. The version that must be deposited can be either the author's Accepted Manuscript or the publisher's Version of Record. Cambridge University Press allows authors to deposit the Accepted Manuscript immediately on acceptance and the Version of Record 12 months after publication, and thus complies with the Mandate of the NIH.

Repository

A database of content that contains, among other things, copies of the research output of authors. Repositories can be institution-based (representing the broad output of an institution), subject-based (representing the output of specific or related subjects), funder-based (representing the output of a funding agency, such as the NIH) or national (representing the output of a country or geographical region). Repositories can hold information as copies of manuscripts, published articles or metadata of these.

SHERPA/JULIET

A database of funding agency and institutional policies on Open Access, maintained by the University of Nottingham, UK.

<http://www.sherpa.ac.uk/juliet/>

SHERPA/RoMEO

A database of publisher copyright policies on Open Access, maintained by the University of Nottingham, UK.

<http://www.sherpa.ac.uk/romeo/>

Subject Repository

See Repository

Version of Record

The version of an article that is published in its final format, and serves as the definitive version. It includes changes that may be made to the author's Version of Record by copy-editing, typesetting and proofing before publication.
