THE JOURNAL
OF
LARYNGOLOGY
AND
RHINOLOGY;

*AN ANALYTICAL RECORD OF CURRENT LITERATURE RELATING TO
THE THROAT AND NOSE.*

EDITED BY

SIR MORELL MACKENZIE, M.D. Lond.,

AND

R. NORRIS WOLFENDEN, M.D. Cantab.,

WITH THE CO-OPERATION OF

DR. JOHN N. MACKENZIE (BALTIMORE)
DR. BRYSON DELAVAN (NEW YORK)
DR. W. PORTER (ST. LOUIS)
DR. JOAL (MONT DORE)
PROF. MASSEI (NAPLES)
PROF. GUYE (AMSTERDAM)
DR. CAPART (BRUSSELS)
DR. CONSTANTIN KARWOWSKI (WARSAW)
DR. BARCLAY J. BARON (BRISTOL)

DR. VALERIUS IDELSON (BERNE)
DR. MICHAEL (HAMBURG)
PROF. RAMON DE LA SOTA Y LASTRA
(SEVILLE)
DR. HOLGER MYGIND (COPENHAGEN)
DR. SMYLY (DUBLIN)
DR. DAVID COLLINGWOOD (SYDNEY)
DR. G. W. MAJOR (MONTREAL)
DR. MAXWELL ROSS (EDINBURGH)

AND

Dr. G. HUNTER MACKENZIE (Edinburgh).

CONTENTS.

Original Article—

A CASE OF PRIMARY SARCOMA OF THE TONSIL. By Dr. HOLGER MYGIND, p. 301.

American Medical Association—

REPORT OF THE MEETING OF THE SECTION ON LARYNGOLOGY AND OTOTOLOGY, p. 307.

Abstracts of Literature relating to—

DIPHTHERIA, p. 333.

NOSE AND NASO-PHARYNX, p. 336.

MOUTH, TONGUE, PHARYNX, &c., p. 340

LARYNX, p. 345.

Reviews—

CYCLOPEDIA OF THE DISEASES OF CHILDREN. BY JOHN M. KEATING, M.D., p. 353.

KILLIAN: THE EXAMINATION OF THE POSTERIOR LARYNGEAL WALL, p. 358.

SCHWENDT: THE CONGENITAL OCCLUSIONS OF THE POSTERIOR NASAL OPENINGS AND THEIR TREATMENT, p. 359.

EXPECTORANTS.

LONDON.]

AUGUST.

[1890

THE IMPROVED YEREKER CHLORIDE OF AMMONIUM INHALER.

Is the only inhaler affording absolutely neutral vapour of Ammonium Chloride, which acts as a useful stimulating expectorant.

Dr. Leberman (BRIT. AND FOR. MED. CHIR. REV.) affirms that "he has employed Ammonium Chloride vapour with the happiest results in one hundred and two cases

of granular sore throat, chronic bronchitis, asthma, whooping cough, and even angina pectoris."

Dr. Murrell says:—"In cases of catarrhal deafness the fumes are readily forced up the Eustachian tube by filling the chest and mouth, pinching the nose, and then swallowing. It is astonishing what good this method of treatment often does."

Supplied to the medical profession at 5s. each. Retail 7s. each.

HAZELINE.

Is very successfully employed as a spray, gargle or solution in *hæmoptysis*, *sore throat* and *pharyngitis*. Its action is sedative, astringent and antiseptic.

Dr. Lauder Brunton says, "internally it is a very efficient hæmostatic in bleeding from the lungs and other internal organs. In some cases of *hæmoptysis*, I have found it more efficient than digitalis or ergot." Dr. Murrell has found Hazeline of much benefit as a spray or douche in cases of *post nasal catarrh*.

Extract from letter to the LANCET, from Roland Smith, M.R.C.S., Senior House Physician, London Hospital. "Hamamelis Virginica is one of the most valuable of hæmostatics, I always use it freely in *menorrhagia* and *hæmoptysis*, with uniformly good results."

Supplied to the medical profession in $\frac{1}{4}$ -lb. and 1 lb. bottles, at 1s. 2d. and 3s. 6d. each. Retail prices, 1s. 6d. and 4s. 6d. each.

THE PORTABLE ORO-NASAL MENTHOL INHALER.

The employment of Menthol as a sedative expectorant, in the form of inhalations, has been highly recommended by Dr. Macnaughten Jones. *He considers Menthol to*

be of value both as a topical application and inhalant, in acute and chronic catarrhal conditions of the naso-pharyngeal mucous membrane, disease

of the turbinate bones, in follicular pharyngitis, in chronic congestive conditions of the laryngeal mucous membrane attended with excessive secretion; in influenza and hay fever.

Dr. Beehag found the application of a Menthol solution in Olive Oil "acted like a charm in *syphilitic rhinitis*" (AUSTRAL. MED. GAZETTE, Feb., 1888).

The Inhaler, complete with solution and throat brush, supplied to the medical profession at 2s. 6d. each. Retail, 3s. 6d. each.

APOMORPHINE TABLOIDS.

Dr. Murrell (LANCET, March 8, 1890) says:—"I often prescribe the fiftieth of a grain Tabloid of Apomorphine as a cough lozenge. In this dose it never excites vomiting and *very rarely* nausea. The great bar to its general acceptance is a deep-rooted impression that Apomorphine is an emetic and nothing else, but undoubtedly its chief use is as an *expectorant*." He highly recommends the employment of Apomorphine in chronic bronchitis, bronchial catarrh and pulmonary diseases generally.

Tabloids of Apomorphine ($\frac{1}{50}$ gr.) are supplied to the medical profession, 25 in tube, at 5d. each; vinaigrette oval bottles, 50 in each, 9d.

BURROUGHS, WELLCOME, & Co., Snow Hill Buildings, London, E.C.,

Will be happy to supply trial Specimens of Pharmaceutical Preparations to Medical Men free on request.
