February 1992

To a parkinsonian patient, a little help means a lot.

*Adding Parlodel to levodopa
can improve symptom control.
Because you want to help
your patient get more out of
life's little pleasures.*

Add

PARLODEL[®] 
(bromocriptine mesylate)

Because quality of life is the issue.

Frisium® 10 mg

(clobazam)

ANTICONVULSIVANT COMME TRAITEMENT ADJUVANT

EFFICACITÉ

- **Frisium** est efficace contre tous les types de crises épileptiques, tant chez les enfants que chez les adultes.¹
- Avec **Frisium**, les patients réfractaires peuvent atteindre une maîtrise complète dans jusqu'à 30 % des cas, et cela compte tenu du type de crises.¹

INNOCUITÉ

- Les effets secondaires sont généralement bénins et passagers.²
- Sur le plan clinique, les interactions médicamenteuses significatives sont rares.
- L'altération de la vigilance est moins prononcée avec **Frisium** qu'avec les autres benzodiazépines.*

POSOLOGIE

- Une dose quotidienne allant jusqu'à 30 mg peut être prise en une seule fois au coucher.

DANS L'ÉPILEPSIE

ajoutez

Frisium® 10 mg

SIBELIUM.*

CHANGING THE FACE

OF MIGRAINE

PROPHYLAXIS.

Sibelium is changing the face of migraine prophylaxis by significantly reducing both the frequency and severity of attacks.^{1,2} Seventy percent of patients can expect a good to excellent response.¹ As well, up to 41% will be completely migraine-free.²

Sibelium represents a new class of calcium antagonist indicated for migraine prophylaxis. Because of its unique cerebral selectivity^{3,4}, Sibelium has not resulted in any reported effect on

heart rate, blood pressure or cardiac output.^{5,6}

Consequently, it is well tolerated by most patients; its most common side effects seldom result in discontinuation of therapy.³ Further, Sibelium's convenient once daily dosage³ enhances patient compliance.

If your migraine patients are candidates for prophylaxis, consider the efficacy of Sibelium. Uniquely selective, generally well-tolerated migraine prophylaxis.

once-a-day
SIBELIUM
flunarizine

Pinpoint accuracy in migraine prophylaxis.

LOW-DOSE LEVODOPA

PROLOPA[®] 50/12.5
levodopa 50 mg benserazide 12.5 mg

CONSENSUS: USE LEVODOPA AT THE LOWEST DOSE POSSIBLE ...

Slow, incremental increases of levodopa can provide optimal relief of Parkinson's symptoms with minimal adverse effects, and offers greater latitude for dosage adjustment over a longer treatment period.⁴⁻⁶

*Only Prolopa is available in a 'low-dose'
50 mg strength...*

ESPECIALLY NOW...

Adjunctive therapy with the unique MAO-B inhibitor, selegiline hydrochloride, can reduce levodopa requirements by as much as 50%.⁵⁻¹¹ Therefore, the need for a low-dose levodopa becomes even more important.

*Prolopa offers the flexibility to meet
the many demands of Parkinson's Disease*

Neurofile Digital EEG System From Nihon Kohden.

Continuing The Standard Of Excellence.

Nihon Kohden, the world leader in EEG, has set industry standards in clinical performance. Today, you can benefit from that knowledge, experience and reliability in digital EEG technology – with Neurofile.

Add Neurofile acquisition and review systems to your new or existing Nihon Kohden EEG instruments. You can acquire data in one location quickly and efficiently, then manipulate and sort data separately without tying up your EEG machines. And with Neurofile, you're assured of compatibility for present and future product upgrades, such as sleep or epilepsy monitoring.

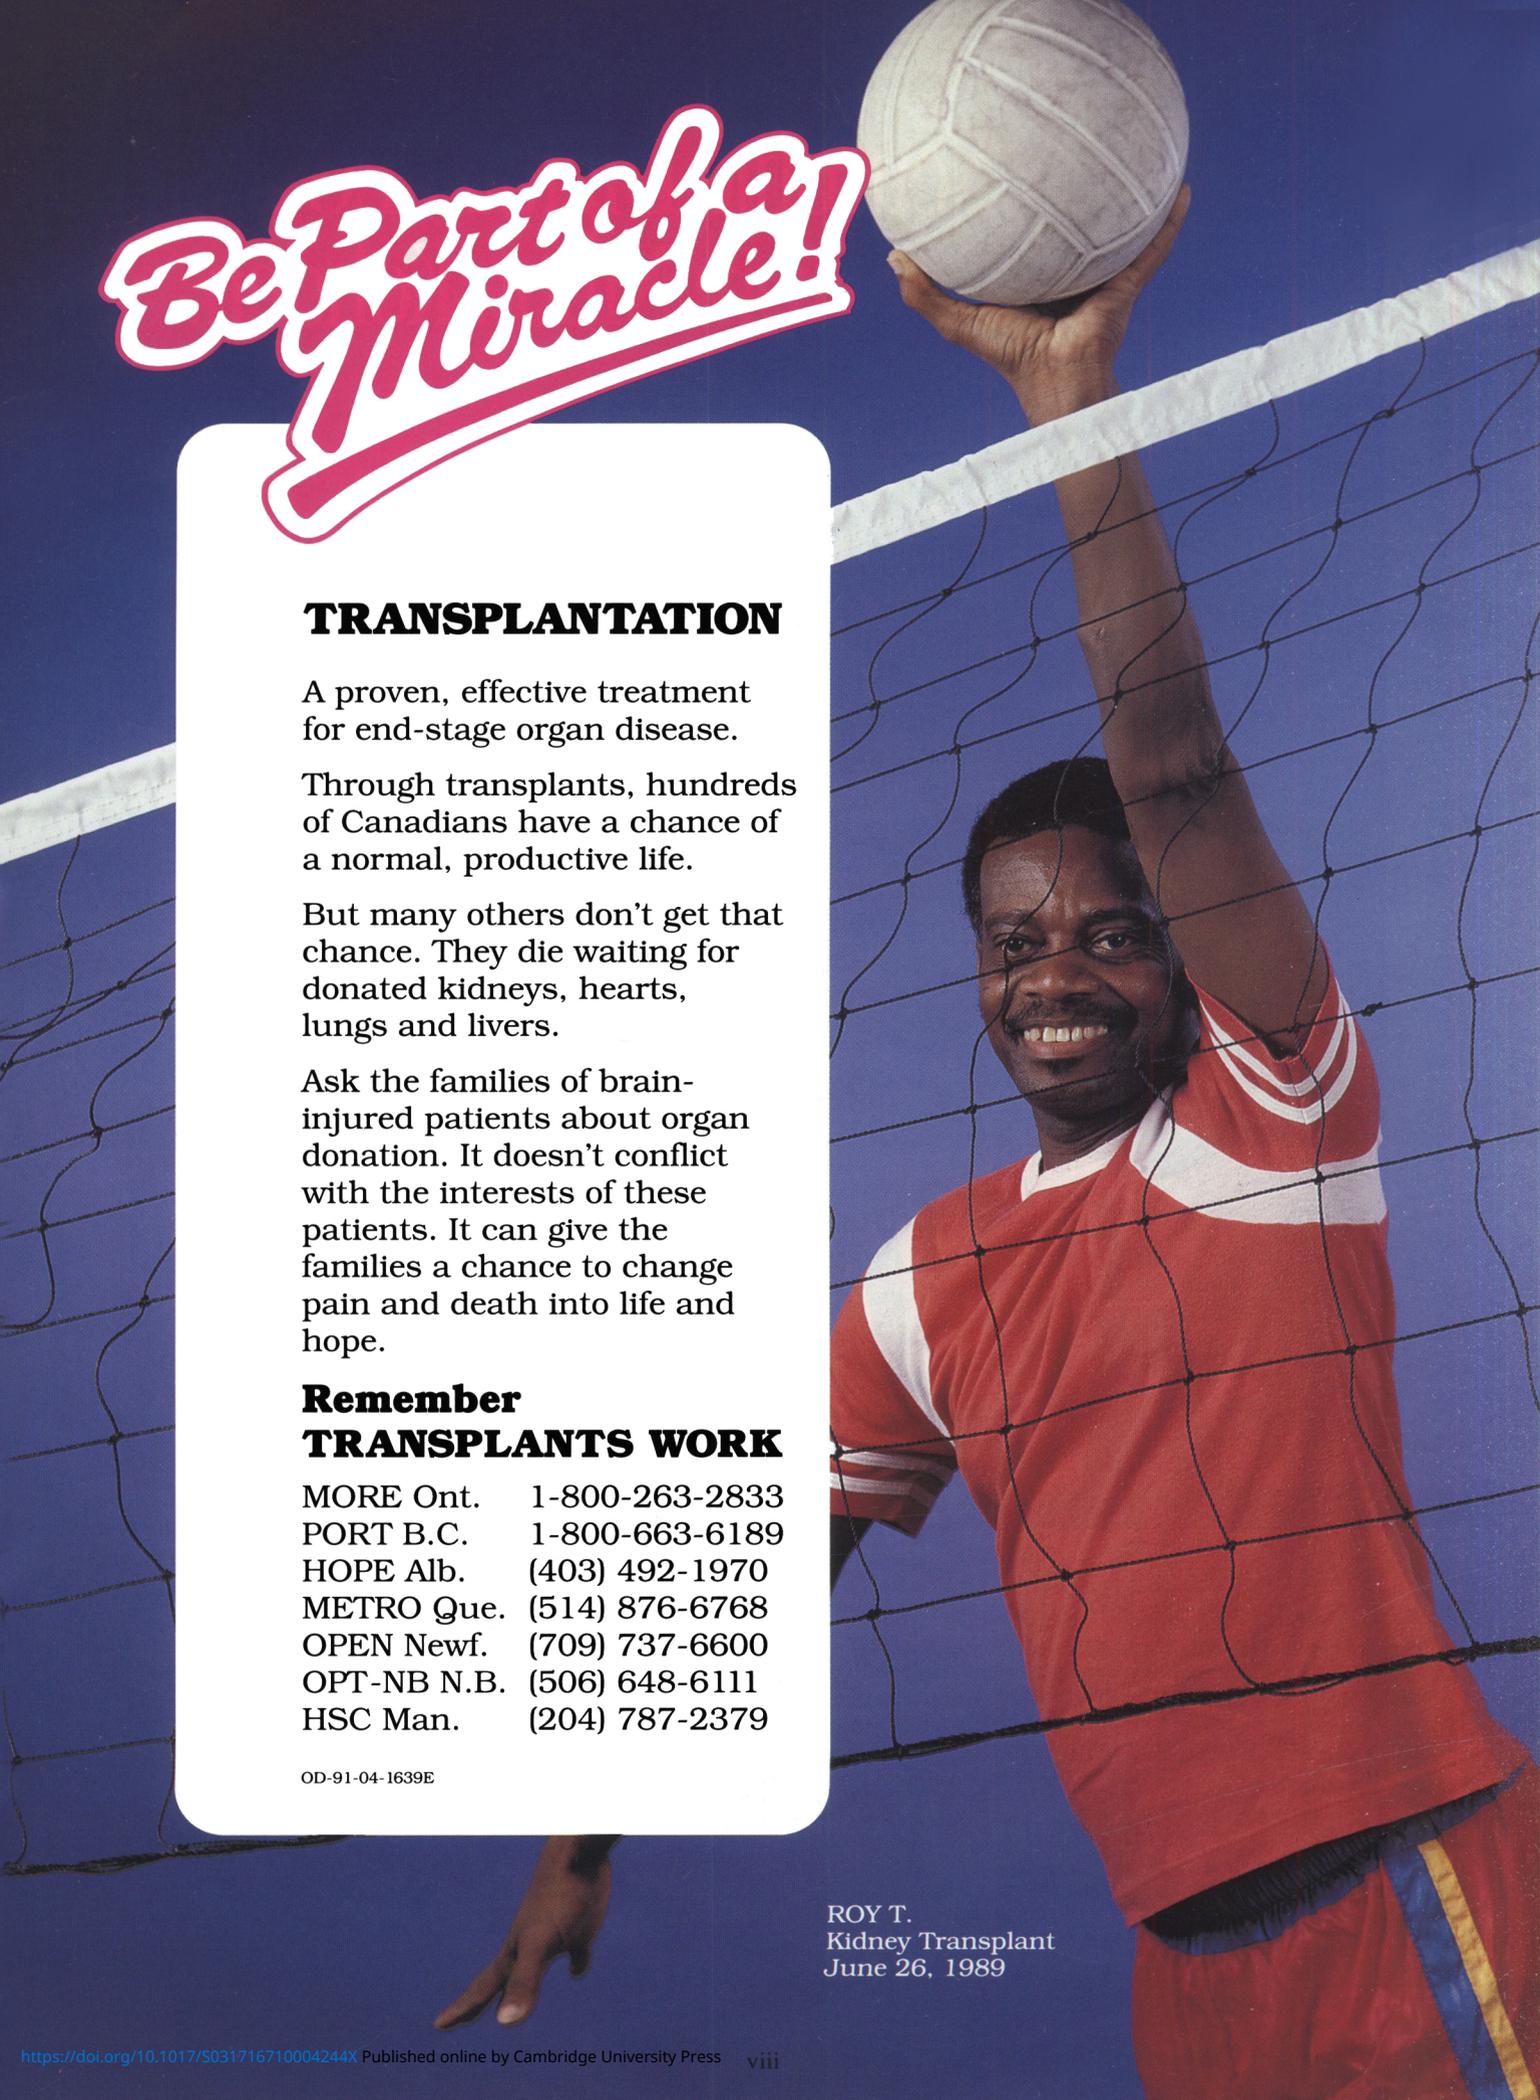

So, whether you already own Nihon Kohden, or are planning to purchase an EEG system, get all the benefits of digital with the industry-proven, clinician-preferred standard in EEG. Nihon Kohden.

To learn more, contact us today at 17112 Armstrong Avenue, Irvine, CA 92714, (714) 250-3959, FAX: (714) 250-3210.

TRANSPLANTATION

A proven, effective treatment for end-stage organ disease.

Through transplants, hundreds of Canadians have a chance of a normal, productive life.

But many others don't get that chance. They die waiting for donated kidneys, hearts, lungs and livers.

Ask the families of brain-injured patients about organ donation. It doesn't conflict with the interests of these patients. It can give the families a chance to change pain and death into life and hope.

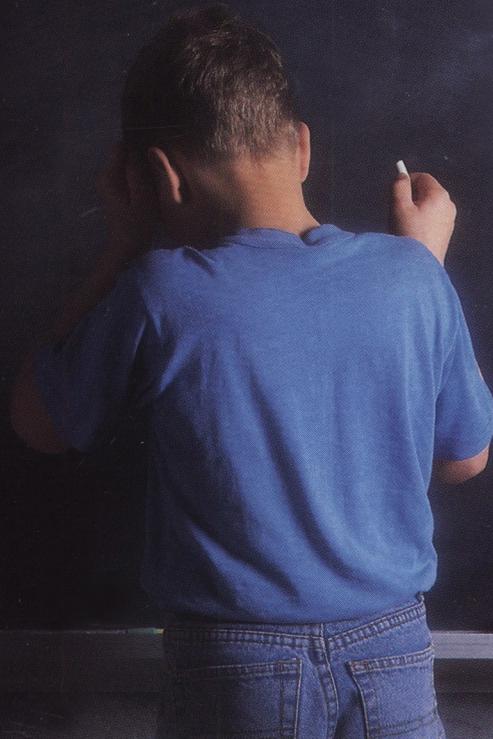

Remember TRANSPLANTS WORK

Certains antiépileptiques peuvent réprimer plus que les crises.

Il arrive malheureusement que certains anti-épileptiques tels la phénytoïne affaiblissent la fonction cognitive.^(1,2,3,4)

D'autre part, Tegretol[®] CR (carbamazépine à libération contrôlée) a peu d'impact sur la fonction cognitive tout en procurant un excellent contrôle des crises.^(1,2,3,4)

Tegretol CR réalise des taux sanguins plus uniformes que le Tegretol conventionnel, ce qui a pour effet de réduire la fréquence des effets secondaires intermittents et de

produire un modèle de fonction cognitive plus stable.^(1,4)

Lorsque vous amorcez un traitement ou qu'il est médicalement nécessaire de le changer, pensez au Tegretol CR. Il est présenté en comprimés à 200 mg et 400 mg facilement divisibles pour une plus grande souplesse d'administration. Sa posologie à deux prises par jour seulement favorise l'observance du patient.

Tegretol CR - Parce qu'un antiépileptique ne doit pas affaiblir la capacité d'acquisition.

TEGRETOL[®] CR.
Aide les épileptiques à réaliser leur plein potentiel.

Getting more reliable data for more confident evoked potential and electrophysiologic analyses is easy. All you need is the new Nicolet Spirit.[™]

Reliable. Powerful. Complete.

Spirit gives you data quality like you've never seen before. Signal-to-noise ratio measurements quantify the amount of noise entering your data so waveform reliability is optimized. Powerful digital filtering with on-line and optional off-line functions further enhances the quality of the information.

Collect reliable data over long distances. Spirit makes it possible. Unique digital amplifiers, built into the headbox, minimize electrical interference so information remains accurate—even in a demanding operating room environment.

Easy. Fast. Flexible.

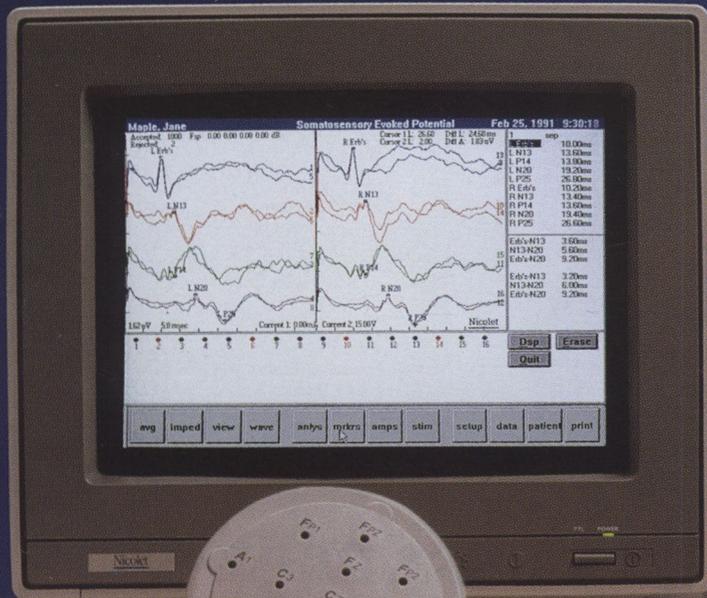

Spirit handles your needs from diagnostic evoked potentials to operating room applications. Its multi-tasking capabilities, intuitive software, color-coded waveforms and more make operation easy...and fast.

Trust a leader in advanced diagnostic instruments to help you diagnose with more confidence. Trust Nicolet. With offices worldwide, we have a Nicolet representative in your area.

Call or write today for further information.

BRINGING BACK CONTROL.

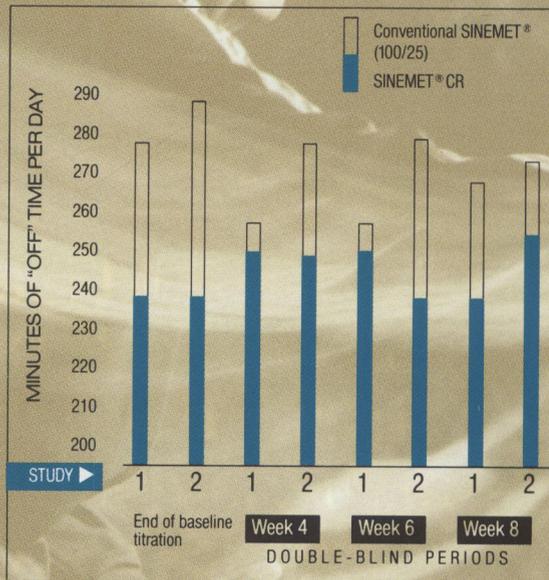

“A controlled-release
formulation of
levodopa/carbidopa

[SINEMET® CR 200/50] offers an
extended duration of dose-by-dose
action. This can result in significantly
improved control of Parkinsonism
(more “on” time)...”¹

Patients can experience greater control with steadier levodopa levels.

New SINEMET® CR reduces "off" time in most patients.

Comparison of "off" times with conventional SINEMET® and SINEMET® CR. Results of 2 multiclinic studies² (adapted).

SINEMET® CR can provide relief of symptoms for all stages of Parkinson's disease.¹

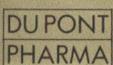

Helps attenuate "on-off" phenomenon.

Improves hours "on" and reduces "off" periods in most patients.¹

Less variation in plasma levodopa levels and the peak plasma level is 60% lower than with conventional SINEMET®.³

Helps prevent motor fluctuations.¹

Less frequent dosing.

CONTROLLED-RELEASE
Sinemet® CR

(levodopa/carbidopa) For the treatment of Parkinson's disease.

Before prescribing, please see product monograph, available on request.

Introduci The risk of stroke h

ng Ticlid. as never been lower.

For TIA
and stroke patients,
Ticlid reduces the risk
47.6% more than ASA
in the first year.^{1,2}

➤ Ticlid is the first agent proven more effective than ASA in preventing initial stroke.¹ It is also proven effective in preventing recurrent non-cardiogenic stroke.³

During the first year of therapy when patients are most at risk,⁴ Ticlid reduces the risk of initial stroke by 47.6% relative to ASA.^{1,2}

Clearly, for TIA and stroke patients the risk has never been lower.^{1,3}

For information on this unique stroke prevention therapy, call the Ticlid Information Hotline 1-800-263-8918.

Ticlid[®]

The risk of stroke has never
been lower.

For brief prescribing information see page xxiv

 SYNTEX[®]

VALPROATE: THE GROWTH OF EXPERIENCE IN PRIMARY GENERALIZED EPILEPSY

For years, valproate has been regarded as an excellent choice for the control of absence seizures.^{1,2}

In addition to its proven efficacy in simple and complex absence seizures,^{2,3} valproate has been shown to be as effective as previous standards in controlling primary generalized seizures with tonic-clonic manifestations.⁴ Epival* tablets have a special enteric-coating designed to reduce GI upset⁵ and are bioequivalent to Depakene*.⁶

Compared to most antiepileptics, Epival has been shown to have minimal effects on behaviour and cognition⁷ and relatively less interactions with commonly-prescribed medications.^{8,9}

Today's consensus favours monotherapy wherever possible. And no other single agent can provide this spectrum of efficacy in the management of primary generalized seizures.¹

Message From The Editor

With this first issue of Volume 19, some members of our editorial staff have completed their terms. Dr. Harvey Sarnat leaves his post as Associate Editor after invaluable duty editing manuscripts in child neurology and neuropathology, as well as often taking on additional responsibilities as an Editor at large at the request of the previous Editor, Dr. Robert G. Lee, who completed his admirable service in June, 1991. Dr. Bryce Weir has served his term as Associate Editor, being responsible for editing most of the neurosurgical papers that we receive. Drs. Paul Bedard, Leo P. Renaud and Jean Reiher leave the Board after diligent service. Dr. T. Peter Seland has finished his effective labour as Book Review Editor. They have served the Journal well. On behalf of the Canadian Congress of Neurological Sciences and its constituent Societies, I express sincere appreciation for their work.

I welcome Drs. George Karpati and Serge G. Gauthier as new members of the Editorial Board. They have been valued ad hoc reviewers. Drs. Larry Becker and John Girvin, having had several years' experience on the Board, have accepted positions as Associate Editors. Dr. Mary Ann Lee is taking the position of Book Review Editor.

Last year the Journal was reviewed externally with favourable outcome. An isolated criticism was the practice of publishing occasional supplements to the Journal, because articles in supplements might not meet the standards of peer review that are applied to regular articles. This issue of the Journal is accompanied by a supplement composed of selected information presented at the Conference on Neurodegenerative Diseases held at L'Estrel, Quebec in 1991. With the conviction that the publication of supplements is valuable means of scientific communication, our policy over the past decade has been to publish selected material that the Board considers to be unique and important to the community of neurological scientists.

Our present policy for selecting supplements concerning scientific symposia consists of ten criteria: 1) The symposium must

have a co-ordinator who is an expert in its theme. The co-ordinator is responsible for compiling articles to be submitted. 2) The topic must be of importance to Journal subscribers. 3) Before soliciting manuscripts, the conference co-ordinator must obtain the approval of the Editor-in-Chief for submitting them for review. 4) All articles submitted must undergo review by members of the Editorial Board or by ad hoc reviewers for the Journal who are not authors of articles in the supplement. 5) Final decisions concerning acceptance or rejection of submitted articles is the responsibility of the Editor-in-Chief in conjunction with the Board, not the co-ordinator or sponsor. 6) The supplement must be sponsored to meet the expenses of this publication. 7) The co-ordinator or the authors must receive no financial gain from compiling the articles to be submitted as a supplement, or from their publication. 8) The content must not be biased in the interest of any sponsor. 9) After review, the number of accepted articles must be sufficient to constitute a body of important information that is current and of interest to the neurological science community. 10) The contents of a supplement are subject to the same copyright regulations that apply to articles published in regular issues of the Journal.

Scientific communications in the Journal, including invited reviews, and letters that concern new scientific information, are sent for peer review. Letters dealing with matters arising from recent articles are an exception; each will be welcomed, and usually sent to the authors for responses which are to be published below the letter. Articles are sent to 2 or 3 reviewers. Typically, at least one of the reviewers is a member of the Editorial Board. The Board is indebted to the many individuals who serve as ad hoc reviewers. Listed on the following page are those who have reviewed articles submitted in the 1991 calendar year. Their contributions are vital in sustaining high standards for this journal.
