Knock-out infection before it starts.

BIOPATCH* Antimicrobial Dressing is proven to reduce the incidence of catheter-related bloodstream infection by 60% and local infection by 44% in patients with central venous and arterial catheters.¹

— Clinical Trial by Dennis Maki, MD and Leonard Mermel, DO ScM

No device is more effective at preventing catheter-related bloodstream infections.²

We know you work hard to combat catheter-related infections, so strike first with BIOPATCH* Antimicrobial Dressing. The BIOPATCH* Dressing foam disk contains chlorhexidine gluconate (CHG), a broad spectrum agent with antimicrobial and antifungal activity. Because BIOPATCH* Dressing releases CHG for seven full days, you can reduce the frequency of dressing changes to allow more time for patient care. Its **LOW COST-IN-USE** and **EASY APPLICATION** is the added one-two punch that will help you knock-out infection — before it starts.

BIOPATCH* DRESSING INDICATIONS FOR USE

Indicated for use on **vascular percutaneous devices** such as CVC's, arterial catheters, dialysis catheters, PICC's, Midlines.

Also indicated for **non-vascular percutaneous devices** such as CAPD's, orthopedic pins and epidurals.
