

CATALOGUE OF RADIAL VELOCITIES OF GALAXIES

G. Palumbo¹, G. Tanzella-Nitti², G. Vettolani²

¹Istituto TESRE, CNR, Bologna, Italy

²Istituto di Radioastronomia, CNR, Bologna, Italy

A catalogue of radial velocities of galaxies has been completed which lists all radial velocities published until the end of December, 1980, for galaxies in both the northern and the southern hemispheres.

For each galaxy the catalogue provides R.A. and Declination, name(s) of the galaxy (NGC, IC, 3 CR, etc.), each known heliocentric radial velocity with its reference, and the type of observation (whether optical or radio).

The comments on dubious identifications, wrong measurements, misprints in the original papers, and similar misleading items are given in the note section.

Statistics of the data contained in the catalogue is given in Table I. The Catalogue of Radial Velocities of Galaxies is being published by Gordon and Breach Science Publishers

Table I

| | |
|--|--------|
| Total number of galaxies with redshift | 8250 |
| Total number of redshifts | 13,672 |
| Total number of optical measurements | 11,132 |
| Total number of quoted references | 2540 |
