

VOLUME 100 SUPPLEMENT 1990

Parasitology

Symposia of the British Society for Parasitology Volume 27

The evolutionary biology of parasitism

EDITED BY A. E. KEYMER and A. F. READ

CO-ORDINATING EDITOR L. H. CHAPPELL

CAMBRIDGE UNIVERSITY PRESS

Subscriptions may be sent to any bookseller or subscription agent or direct to the publisher: Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU. Subscriptions in the USA and Canada should be sent to Cambridge University Press, Journals Department, 40 West 20th Street, New York, NY 10011. All orders must be accompanied by payment. The subscription price of volumes 100 and 101, 1990 is £139 UK, £149 elsewhere (US \$320 in the USA and Canada), payable in advance, for six parts and any supplements; separate parts cost £22 or US \$47 each (plus postage). Second class postage paid at New York, NY and at additional mailing offices. POSTMASTER: send address changes in USA and Canada to *Parasitology*, Cambridge University Press, 110 Midland Avenue, Port Chester, New York, NY 10573.

Contents

<i>Preface</i>	S1		
<i>List of contributions</i>	S3		
<i>Acknowledgements</i>	S4		
The evolutionary biology of molecular parasites			
Introduction	S5		
The error threshold	S6		
Recombination	S8		
Host jumping	S9		
Molecular games	S10		
Viruses of viruses	S10		
Transposons and complementation	S10		
Host countermeasures against transposons	S11		
Defective interfering viruses	S11		
Coviruses	S13		
The retroid game	S14		
Conclusion	S15		
Appendix	S15		
References	S16		
<i>B</i>-chromosomes: germ-line parasites which induce changes in host recombination			
Introduction	S19		
<i>B</i> -chromosomes	S19		
The pathological effects of <i>B</i> -chromosomes	S20		
The increase of <i>B</i> -chromosomes within hosts	S20		
The spread of <i>B</i> -chromosomes between hosts	S21		
The genetics of the <i>A</i> – <i>B</i> interaction	S21		
The theory of inducible recombination	S22		
Increased recombination as a host response to <i>B</i> -infection	S23		
Conclusion	S24		
References	S25		
The evolution of acquired immunity to parasites			
Summary	S27		
Introduction	S27		
Evolutionary pressures on the immune system	S27		
Resistance to infection is the sole purpose of the immune system	S27		
Polymorphism accounts for much of the complexity of the immune system	S28		
The number of loci within the MHC reflects this polymorphism	S28		
Why do MHC genes occur together with a gene complex?	S28		
		The differentiation of Class I from Class II	S28
		Immune response genes outside the MHC	S29
		Parasites can manipulate immunological molecules	S29
		Evolutionary pressures on parasites	S30
		Immune suppression (Is) genes	S30
		Phosphatidylinositol anchorage	S32
		References	S33
		Virulence of lizard malaria: the evolutionary ecology of an ancient parasite–host association	S35
		Summary	S35
		Introduction	S35
		Lizard malaria as a model for tests of the theory of parasite virulence	S37
		Study systems	S38
		Consequences of malarial infection for lizards	S39
		Haematology	S39
		Oxygen consumption	S41
		Stamina and running speed	S42
		Social behaviour and ability of males to obtain mates	S43
		Sexual selection	S44
		Reproductive output	S45
		Survival and growth	S46
		Body temperature	S46
		Discussion	S49
		References	S50
		The evolution of inducible defence	S53
		Summary	S53
		Introduction	S53
		Inducible structural resistance in invertebrates	S54
		The host response to parasites as an inducible defence and the phylogeny of immune responses	S54
		The selective advantages of inducible defences	S59
		Cost of defence	S59
		Camouflage against consumer counter-adaptation	S60
		References	S60
		Parasites, desiderata lists and the paradox of the organism	S63
		Introduction	S63
		The organism is not an ‘optimon’	S63
		The paradox of the organism	S64
		Meiotic drive	S64
		The extended phenotype	S64
		Adaptation or boring byproduct	S65

Extended genetics	S68	Selection and evolution of virulence in bacteria: an ecumenical excursion and modest suggestion	S103
Blurring the boundaries	S70	Summary	S103
Overlapping and non-overlapping desiderata lists	S70	Introduction	S103
References	S72	The traditional view: (“conventional wisdom”)	S103
Genetic exchange and evolutionary relationships in protozoan and helminth parasites	S75	Ecological and epidemiological studies of parasite–host coevolution (the enlightenment)	S104
Summary	S75	Limitations of the enlightened theory	S105
Introduction	S75	Evidence in support of the enlightened theory	S105
Evolutionary relationships	S76	The mechanisms of pathogenicity in bacteria	S106
Genetic exchange systems in parasites	S78	Virulence determinants	S106
Evolution of genetic exchange	S83	(i) Entry	S107
References	S85	(ii) Adhesion	S107
Parasite–host coevolution	S89	(iii) Toxins	S107
Introduction	S89	(iv) Avoidance of host defences	S108
Evolution of virulence	S89	(v) Invasion and replication in somatic cells	S108
Chaos and dynamics and genetics of host–parasite associations	S91	Inheritance of virulence determinants	S109
Invasion or emergence of new viral and other parasites	S92	Inferences from studies of the population genetics of bacteria	S109
The molecular history of HIV	S94	Selection for virulence determinants	S110
Doubling times for HIV seroprevalence	S94	Evidence for direct and coincidental selection for virulence	S110
Spatial heterogeneity and the spread of infection	S95	Adhesion	S110
Long and variable infectious period and the spread of infection	S96	Toxin production	S110
Conclusions	S98	Avoidance of host defences	S111
Appendix A	S98	Invasion of somatic cells	S111
Appendix B	S99	Our ‘modest’ suggestion	S111
References	S100	Experimental tests of hypotheses for selection and virulence	S111
		Coda	S112
		References	S113
