6s. net; vol. VII. no. 3, Price 6s. net; vol. VII. no. 6, Price 6s. net; and
vol. VIII. no. 2, Price 6s. net.)

CONTENTS OF THE FIRST PLAGUE NUMBER, September 1906.

Introduction

- I. Experiments upon the transmission of plague by fleas
- II. Note on the species of fleas found upon rats, *Mus rattus* and *Mus decumanus*, in different parts of the world, and on some variations in the proportion of each species in different localities. By the Hon. N. Charles Rothschild
- III. The physiological anatomy of the mouth-parts and alimentary canal of the Indian rat flea, *Pulex cheopis*, Rothschild
- IV. On the effect upon virulence of passage of *B. pestis* through rats by subcutaneous inoculation without intermediate culture
- V. On the effect upon virulence of passage of *B. pestis* through rats by cutaneous inoculation without intermediate culture
- VI. A note on the immunity of Bombay rats to subcutaneous injection of plague cultures
- VII. On the infectivity of floors grossly contaminated with cultures of *B. pestis*
- VIII. On the number of plague bacilli in the blood, urine, and faeces respectively of rats which had died of plague
- IX. On the quantitative estimation of the septicaemia in human plague
- X. On the existence of chronic plague in rats in localities where plague is endemic

116 pp., with 6 Plates and 6 Folding Tables.

CONTENTS OF THE SECOND PLAGUE NUMBER, July 1907.

- XI. The diagnosis of natural rat plague
- XII. The pathological histology of the spleen and liver in spontaneous rat plague, with observations on the experimental infection. By J. C. G. Ledingham, M.B., B.Sc., M.A.
- XIII. Transmission of plague by feeding rats with infected material
- XIV. On the significance of the locality of the primary bubo in animals infected with plague in nature
- XV. Further observations on the transmission of plague by fleas, with special reference to the fate of the plague bacillus in the body of the rat flea (*P. cheopis*)
- XVI. Experimental production of plague epidemics among animals. (*Second Communication*)
- XVII. Experiments in plague houses in Bombay. (*Second Communication*)
- XVIII. On the external anatomy of the Indian rat flea (*P. cheopis*), and its differentiation from some other common fleas
- XIX. On the natural occurrence of chronic plague in rats
- XX. A note on man as a host of the Indian rat flea (*P. cheopis*)

154 pp. with 6 Plates.

CONTENTS OF THE THIRD PLAGUE NUMBER, December 1907.

- XXI. Digest of recent observations on the epidemiology of plague
- XXII. The epidemiological observations made by the commission in Bombay City
- XXIII. Observations made in four villages in the neighbourhood of Bombay
- XXIV. General considerations regarding the spread of infection, infectivity of houses, etc., in Bombay City and Island
- XXV. Observations in the Punjab villages of Dhand and Kasel.

302 pp., with 23 Plates, and 76 maps and charts.

CONTENTS OF THE FOURTH PLAGUE NUMBER, May 1908.

- XXVI. The part played by insects in the epidemiology of plague. By D. T. Verbitski, M.D., St Petersburg
- XXVII. Report on experiments undertaken to discover whether the common domestic animals of India are affected by plague. By W. B. Bannerman and R. J. Kápadia
- XXVIII. Additional experiments on the septicaemia in human plague, with an account of experiments on the infectivity of the excreta
- XXIX. Observations on the bionomics of fleas with special reference to *Pulex cheopis*
- XXX. The mechanism by means of which the flea clears itself of plague bacilli
- XXXI. On the seasonal prevalence of plague in India
- XXXII. On the differential diagnosis of the plague bacillus from certain allied organisms
