

# journals.cambridge.org

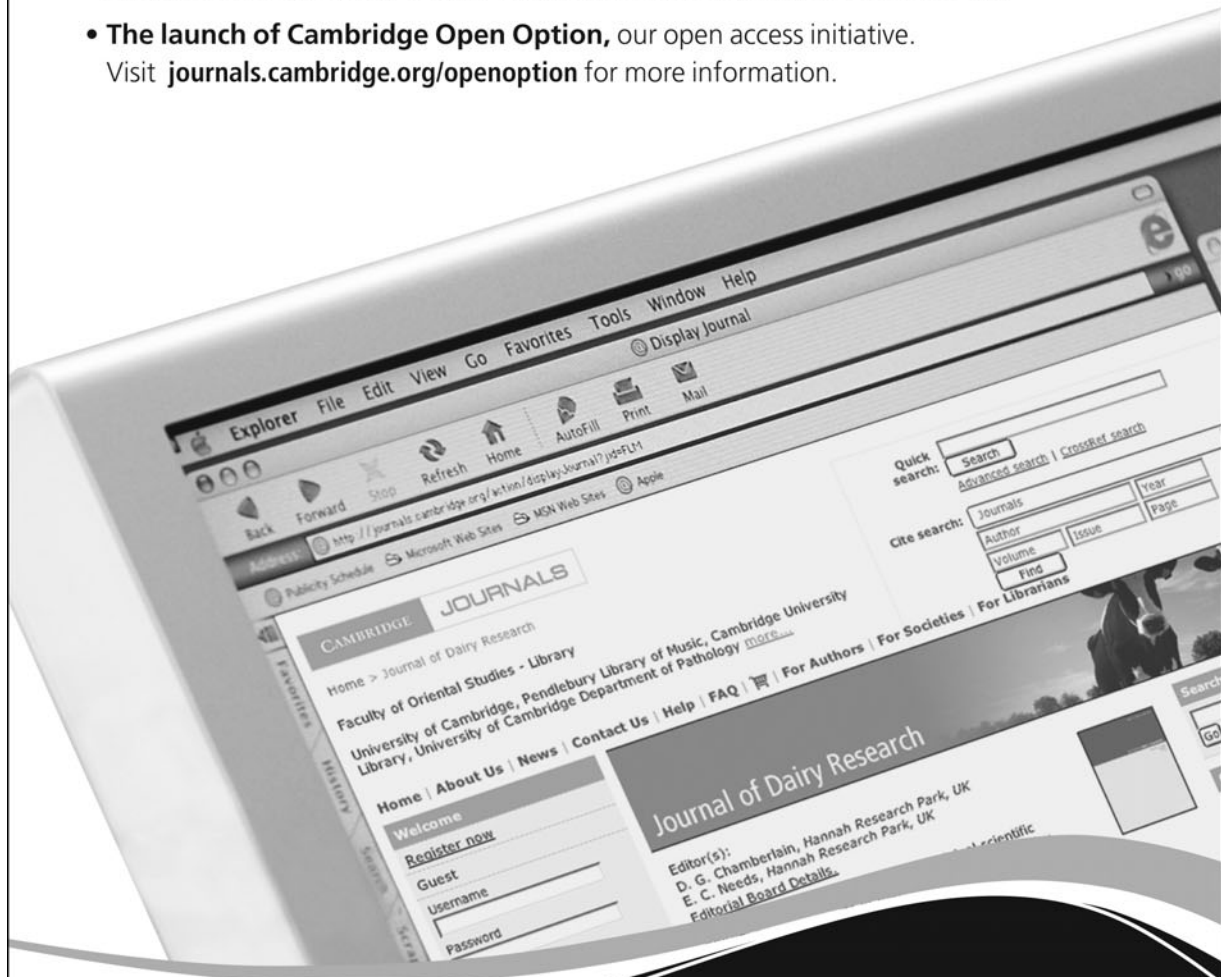

Advancing research. Increasing access.

Informed by detailed consultation with the library and research communities, we are constantly developing our industry-leading online journals platform.

Some recent advances include:

- **Refreshed site design**, facilitating rapid access to the most relevant content.
- **New advanced search interface** and a more detailed, fielded quick search function.
- **Enriched content** in the form of multimedia companions and editorial blogs.
- **The launch of Cambridge Open Option**, our open access initiative.

Visit [journals.cambridge.org/openoption](http://journals.cambridge.org/openoption) for more information.

# Journal of Helminthology

**Journal of Helminthology**

is available online at

**Editor**

John Lewis, Royal Holloway, University of London, UK

*Journal of Helminthology* publishes original papers and review articles on all aspects of pure and applied helminthology, particularly those helminth parasites of environmental health, medical or veterinary importance. Research papers on helminths in wildlife hosts, including plant and insect parasites, are also published along with taxonomic papers contributing to the systematics of a group. The journal will be of interest to academics and researchers involved in the fields of human and veterinary parasitology, public health, microbiology, ecology and biochemistry.

**Price information is available at

## Notes for Authors

*Comparative Exercise Physiology (CEP)* provides a forum for presenting the results of research related to understanding and improving animal exercise and performance. Research into all animals, including humans, will be welcome. The key areas the journal will concentrate on include: exercise physiology, biomechanics and gait (including the effect of riders), nutrition and biochemistry, rehabilitation, psychology and behaviour, breeding and genetics. Other areas for consideration include pharmaceuticals and doping, ageing, environment, transport and any other research relevant to exercise and athletic performance.

### Styles of Paper

*CEP* publish four types of paper:

- 1) Full research papers. A full account of a complete project with experimental details.
- 2) Short communications. A preliminary account of exciting new results for which work is ongoing. Indicative experimental summaries should be included.
- 3) Research notes. Short accounts of small projects that might not merit a full paper (e.g. undergraduate research projects or minor aspects of a Ph.D. thesis). These might include technical notes.
- 4) Reviews. Literature overviews of recent research in a larger subtopic or comparative reviews of related work in different species.

In addition to these four types we also welcome 'Letters to the Editor' with comments on recently published papers to encourage a dialogue between readers and researchers.

*Please indicate the type of paper you are submitting.*

### Technical and Nomenclature Standards

All work should use SI units as standard. Anatomical terms can be a mixture of the English vernacular and Latin, depending on current usage.

### Peer Review

All contributions will be reviewed by at least two referees to ensure both accuracy and relevance. You should submit the names and contact details (including email addresses) of at least two, and up to four, potential referees for your paper.

### Submission of Manuscripts

Manuscripts should be submitted online via our manuscript submission and tracking site, [www.edmgr.com/cecp](http://www.edmgr.com/cecp). Full instructions for electronic submission are available directly from [journals.cambridge.org/CEP](http://journals.cambridge.org/CEP). To facilitate rapid reviewing, communications for peer review will be electronic and authors will need to supply a current email address when registering to use the system.

### Final Manuscript Preparation

If your paper is accepted, you should supply the final paper as a Word document with separate figure files to [exercise@cambridge.org](mailto:exercise@cambridge.org). When submitting the final version please specify the software used for word processing and illustrations and identify the operating system used (PC, Mac, Unix etc). We kindly ask that you follow the instructions below for the final version. Please use double line spacing and ample margins and separate each paragraph by a blank line, numbering each page. Do not indent the start of each paragraph or use underlining. Please use italics for taxonomic nomenclature, bold for headings and standard abbreviations (e.g. Fig. and Figs) and SI units.

### Arrangement of Papers

Please arrange your paper in the following order:

- 1) Title page. Article title, authors addresses (one author should be identified for correspondence), and abstract.
- 2) The text, divided under appropriate headings.
- 3) Acknowledgements (if any).
- 4) References.
- 5) Tables (each on a separate sheet).
- 6) Captions to illustrations (group on a separate sheet or sheets).
- 7) Illustrations, each on a separate sheet or as separate files.

### Tables

Tables should be in a simple form. They should not be used if text or illustrations give the same information. Each table must be accompanied by a clear and concise caption.

### Illustrations

Please ensure text figures, line drawings, computer-generated figures and graphs are of sufficient size and quality to allow for reduction. Please avoid the use of grey tints or complex hatching and only use halftone photographs where they make a real contribution to the text. Please inform the Editor at the earliest opportunity if you wish to use colour illustrations (we will ask you to pay in advance for the use of colour, but we can advise on how this can be kept to a minimum).

### References

References should be in the Vancouver system, i.e. sequential numbering in the text and corresponding reference list. Reference numbers should be raised superscripts.

You should use the following conventions when providing the full citations in the reference list.

1 Shibata I, Mori M and Uruno K (1997). Experimental infection of maternally immune pigs with porcine reproductive and respiratory syndrome (PRRS) virus. *Journal of Veterinary and Medical Science* **60**: 1-13.

2 Sanderson CJ (1999). Cytokines active on eosinophils. In: Makino S and Fukuda T (eds) *Eosinophils: Biological and Clinical Aspects*. Boca Raton: CRC Press, pp. 274-287.

3 Dalton JP (1999). *Fasciolosis*, p. 57. Wallingford: CABI Publishing.

### Ethics

The authors must demonstrate that the experimental procedures employed conform to the accepted principles of animal welfare in experimental science. Please see the CEP website for more details ([journals.cambridge.org/cecp](http://journals.cambridge.org/cecp)).

### Copyright

Papers are accepted papers on the understanding that the work has been submitted exclusively to the journal and has not been previously published. Authors will be supplied with a transfer of copyright form with their proofs, this must be completed and returned to the Publisher.

Note that it is the author's responsibility to ensure that permission has been obtained from the copyright owner if you wish to reuse any figures or illustrations from previously published work.

### Proofs

We will contact, and send page proofs for correction, to the first named author unless you indicate otherwise.

### Offprints

The corresponding author will be sent a PDF file of the final published article for use. There will also be an option to purchase offprints.

COMPARATIVE **EXERCISE** PHYSIOLOGY**CONTENTS**

## RESEARCH PAPERS

- Comparison of Polar® heart rate interval data with simultaneously recorded ECG signals in horses**  
M Parker, D Goodwin, RA Eager, ES Redhead and DJ Marlin 137–142
- Fluoroscopic study of oral behaviours in response to the presence of a bit and the effects of rein tension**  
JM Manfredi, D Rosenstein, JL Lanovaz, S Nauwelaerts and HM Clayton 143–148
- Forelimb kinematics of the flat walk and fox trot of the Missouri Fox Trotter**  
MC Nicodemus and K Slater 149–156
- Effects of ginger and cranberry extracts on the physiological response to exercise and markers of inflammation in horses**  
NR Liburt, KH McKeever, JM Streltsova, WC Franke, ME Gordon, HC Manso Filho, DW Horohov, RT Rosen, CT Ho, AP Singh and N Vorsa 157–169
- Effects of high-intensity training on monocarboxylate transporters in Thoroughbred horses**  
Y Kitaoka, Y Wakasugi, D Hoshino, K Mukai, A Hiraga and H Hatta 171–175
- Maximal aerobic capacity ( $VO_{2max}$ ) in horses: a retrospective study to identify the age-related decline**  
A Walker, SM Arent and KH McKeever 177–181
