ADD NEURONTIN

No pharmacokinetic drug interactions with standard
anticonvulsants have been observed with Neurontin.
Thus, it is easy to use as adjunctive therapy with
existing antiepileptic drugs.¹

NEURONTIN^{*}
(gabapentin capsules)

Easy to add-on

Neurontin is indicated as adjunctive therapy for the management of patients who are not satisfactorily controlled by conventional therapy. The most commonly observed adverse events not seen at an equivalent frequency in placebo-treated patients were somnolence, dizziness, ataxia, fatigue, nystagmus and tremor. Since Neurontin was administered most often in combination with other antiepileptic agents, it was not possible to determine which agent(s) was associated with adverse events.

Supplement

New Generation Antiepileptic Drugs Recent Developments in the Treatment of Epilepsy

Victoria, June 1995

The Satellite Symposium "New Generation Antiepileptic Drugs: Recent Developments in the Treatment of Epilepsy" was held during the 30th Meeting of the Canadian Congress of Neurological Sciences in Victoria on June 20, 1995. The symposium consisted of five separate presentations by epileptologists from North America and Europe.

Quality of Life and New Antiepileptic Drugs in the Treatment of Epilepsy	David Chadwick	Suppl. 2- S3
Lamotrigine – An Update	Martin J. Brodie	Suppl. 2- S6
Gabapentin	Joseph Bruni	Suppl. 2-S10
Vigabatrin	Alan Guberman	Suppl. 2-S13
Antiepileptic Drugs – Current Use	B. Joe Wilder	Suppl. 2-S18

ACKNOWLEDGEMENTS

The authors express their gratitude to the following individuals and organizations: Lucile Edwards, Secretariat, The Canadian Congress of Neurological Sciences, for the assistance in planning the meeting; Glaxo Wellcome Inc. for financial support for the meeting and publication of this symposium; and all the attendees of the symposium for their interest and active participation.
