ADVERTISEMENTS

The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR

LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local bookseller, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

Audi partem alteram'

St. Augustine

Fifteen hundred years ago, St. Augustine advised his readers to "hear the other side." Today, your patients with a hearing problem will welcome the same advice from you. Just mention Ingrams.

Ingrams can help your patients to "hear the other side," for they do not represent any one manufacturer and are thus able to give completely impartial advice about hearing aids.

Ingrams help your patient to choose from twenty-six different makes. This is the largest selection in the country—and some of the most modern aids are exclusive to Ingrams.

This is why you, like so many E.N.T. Specialists, can confidently advise your patients to hear the full story from Ingrams *before* they buy a hearing aid.

ORBENIN^{Regd.}

SODIUM CLOXACILLIN

**ORAL PENICILLIN
ACTIVE AGAINST
THE 'HOSPITAL
STAPHYLOCOCCUS'**

Orbenin is highly bactericidal to both resistant and sensitive staphylococci, and also to other Gram positive organisms such as streptococci and pneumococci.

Dosage: 500mg. orally (capsules or syrup) 6-hourly.
Orbenin may also be given by Intramuscular injection.

Orbenin is a product of British research at
BEECHAM RESEARCH LABORATORIES

The De Luxe Otoscope by Keeler

—a first-class
instrument

Exceptional performance is provided by this Otoscope which features a telescopic eye piece for better vision and more accurate diagnosis.

- ★ 3x or 6x focusing telescopic magnifier with lateral adjustment.
- ★ 4 Aural and 1 Nasal black all-nylon specula (2.5mm. to 8mm.) all are unbreakable, can be boiled or autoclaved, and almost eliminate the nuisance of reflections. They are comfortable for the patient.
- ★ Ample space for manipulation of surgical instruments.
- ★ The specula are easily interchangeable, having a simple push fit. The instrument head and battery handle may be quickly separated and joined by means of the quick start nylon thread. Access for changing batteries is both quick and easy.
- ★ Unbreakable nylon otoscope head.
- ★ Brilliant homogeneous illumination.
- ★ Attractive appearance—modern styling.
- ★ Metal handle with durable white enamel finish.
- ★ Takes standard U-2 size batteries, or a Keeler K-2 rechargeable battery. Also available on a Keeler New Era rechargeable handle at extra cost.
- ★ Supplied in a robust, yet light-weight, unbreakable case.

... because it satisfies the criteria more completely than other antibacterial agents:

- High activity against the infecting organisms
- Bactericidal action
- High urine level
- Effective tissue level

that is why Penbritin achieves outstanding clinical success rates in Urinary Tract infections
 Oral dosage: 500mg (2 capsules) 8 hourly.

Penbritin (regd) (ampicillin) is a product of British research at
BEECHAM RESEARCH LABORATORIES

AUDIOLOGICAL EVALUATION OF THE PEDIATRIC PATIENT

By MAURICE H. MILLER, Ph.D., and
IRA A. POLISAR, M.D., F.A.C.S. Both
of State University of New York Downstate
Medical Center, Brooklyn, New York.

Emphasis is on various diagnostic techniques for hearing evaluations. *The personnel, equipment, and physical plant for proper performance of these procedures are described.* Each technique is then evaluated as to its overall clinical value and related to other aspects of the total evaluation. Detailed case histories illustrate the contributions made by various procedures. (*A Monograph in American Lectures in Speech and Hearing edited by Robert West.*)

Triominic

Oral Nasal Decongestant **WANDER**

'Triominic' timed-release tablets and orange-flavoured syrup contain antihistamines and a decongestant in balanced proportions to ensure relief from symptoms of nasal allergy for between 6 and 8 hours. The active constituents of 'Triominic'—the original oral decongestant—reach the nasal mucosa systemically. This obviates the rebound congestion which may follow the topical use of vasoconstrictors.

Formula per timed-release tablet.

Phenylpropanolamine hydrochloride.....	50 mg.
Mepyramine maleate B.P.....	25 mg.
Pheniramine maleate.....	25 mg.
S.2 Part 1	

'Triominic' is also available as an orange-flavoured syrup.

Basic N.H.S. prices: 50 tablets 5/9½; 2 fl. oz. 2/6

'OTOSPORIN'

The modern method of treatment in otitis externa, chronic suppurative otitis media, and infected mastoid cavities, is 'Otosporin' Drops. 'Otosporin' is an aqueous suspension containing neomycin and polymyxin B which are together effective against practically all the bacteria found in ear infections. In addition, it contains hydrocortisone to reduce inflammation and swelling, thereby providing easier access for the antibiotics.

'OTOSPORIN' BRAND **Drops** ISSUED IN BOTTLES OF 5 ml.
