dated 1638. While it bears a resemblance to the 'true' Hippocrates busts the chin seems very prominent and Richter mentions that this portrait is probably an 'invented one made up in the mind of the sculptor'. The reason for the portrayal of the prognathic chin remains an enigma. The third is a photograph of a lithograph (Figure 13) which appeared in 1825;<sup>25</sup> this seems to resemble both the ring stone (Figure 10) and Rubens' representation (Figure 12). It seems likely that this too is an invented portrait.
