
The Scientific Community

Sir James Taylor

The author traces the growth of science through the ancient world, the 'New Learning' and the Royal Society, the Industrial Revolution, and the two world wars; and discusses the origins of learned societies and professional bodies, the institutionalization of science, and the exponential increase in numbers of the scientific community. The accusation that scientists are responsible for social ills is examined, and wider roles and new horizons for scientists in the future are suggested. Paper covers £1.05 *Science and Engineering Policy Series*

John Dalton

Critical Assessments of his Life and Science

Arnold Thackray

John Dalton (1766-1844) was an archetypal 'new man' of Industrial Revolution science. His life illuminates the changing social background and cultural meaning of science in the first stages of its professionalization. Arnold Thackray, a leading authority on Dalton, has searched out previously unknown documents from many archives for his study of the central aspects of Dalton's social context and intellectual achievement. 8 illustrations £5.75 *Harvard*

Newton and Russia

The Early Influence, 1698-1796

Valentin Boss

At the end of the seventeenth century knowledge of the heliocentric concept of the universe was almost non-existent in Russia outside Kiev and Moscow, and St Petersburg, the cradle of Russian science, had not been built. Three decades later, however, Isaac Newton's revolutionary doctrines had taken root in the St. Petersburg Academy, and a nation long identified with backwardness, superstition, and ignorance had vaulted into the modern era. This is the first study in any language to examine Newton's influence in Russia. Frontispiece 47 illustrations £9.50 *Harvard*

Oxford

H. G. J. MOSELEY: THE LIFE AND LETTERS OF AN ENGLISH PHYSICIST, 1887-1915

John L. Heilbron, Associate Professor of History at Berkeley

This book is a full record of Moseley's brief and brilliant career. It gives instructive detail about Eton, which, as Mr Heilbron shows, offered a more opportunity for acquiring a foundation in science than its emphasis on Greek and games would suggest; about Oxford, a scientific backwater in Moseley's time; and about Rutherford's thriving laboratory at the University of Manchester.

225 pages £5.70

MOSES MAIMONIDES ON THE CAUSES OF SYMPTOMS

Edited by J. O. Leibowitz and Shlomo Marcus

The subject of this book is a treatise by Maimonides (1135-1204)—Jewish philosopher and at one time physician to the court of Egypt—commonly known as *De causis accidentium*. Presented here for the first time in a multi-lingual critical edition that includes the Hebrew, Arabic and medieval Latin texts as well as commentaries on each of them.

250 pages £4.75
