You'll never see us launch a new product.

We can't often boast that an airliner's taking off with a revolutionary new aviation fuel in its tanks.

Or that it's using totally new, radically different lubricants.

Not that we suffer from false modesty.

It's just that all our aviation products that reach the market do so after a research and

development programme lasting for years – aided by possibly the finest lab. facilities in the business.

By the time one of these fuels or oils is ready to enter regular airline service, it has proved itself over and over again over a lengthy trial period.

So it can't exactly be new.

Though it will certainly be ahead of its time.

SHELL-MEX AND B.P. LTD.

Operators in the U.K. of the Shell and the BP Aviation Services.

Today

BAC One-Eleven, Lightning, BAC 167 Strikemaster and Thunderbird are among the aircraft and missile systems which have made BAC a world force in aerospace

the value of BAC products
in worldwide service is \$3,500,000,000

Tomorrow

The BAC/Breguet Jaguar, the Panavia MRCA, the Rapier missile system, and space programmes such as Intelsat IV provide a broad and international base for BAC's drive for larger world markets

The Concorde supersonic airliner, designed and built by BAC in collaboration with Aérospatiale of France, will revolutionise the world's long distance air travel

we will double it.
