

ADVANCES IN APPLIED PROBABILITY
VOLUME 39 (2007): INDEX
Stochastic Geometry and Statistical Applications

	PAGES
AVERKOV, G. AND BIANCHI, G. Retrieving convex bodies from restricted covariogram functions ..	613–629
BALLANI, F. The surface pair correlation function for stationary Boolean models	1–15
BAUMSTARK, V. AND LAST, G. Some distributional results for Poisson–Voronoi tessellations	16–40
BIANCHI, G. <i>see</i> AVERKOV, G.	
BOROVKOV, K. A. AND ODELL, D. A. On spatial thinning-replacement processes based on Voronoi cells	293–306
COWAN, R. Identities linking volumes of convex hulls	630–644
GANESH, A. AND XUE, F. On the connectivity and diameter of small-world networks	853–863
HOFFMANN, L. M. Intersection densities of nonstationary Poisson processes of hypersurfaces	307–317
—— On weak stationarity and weak isotropy of processes of convex bodies and cylinders	864–882
LAST, G. <i>see</i> BAUMSTARK, V.	
MÄNSSON, M. A connection between the volume fractions of the Stienen model and the dead leaves model	41–52
ODELL, D. A. <i>see</i> BOROVKOV, K. A.	
OLSBO, V. On the correlation between the volumes of the typical Poisson–Voronoi cell and the typical Stienen sphere	883–892
PIMENTEL, L. P. R. Multitype shape theorems for first passage percolation models	53–76
ROY, E. Bartlett spectrum and mixing properties of infinitely divisible random measures	893–897
THORISSON, H. The Palm-duality for random subsets of d -dimensional grids	318–325
WADE, A. R. Explicit laws of large numbers for random nearest-neighbour type graphs	326–342
XUE, F. <i>see</i> GANESH, A.
