

the subject concerned. References are given to drawings which, except for those of the twenty-one plates in Part II, are to be found in Part I of the Manual. The volume is completed by an index which is divided into two parts. The first consists of the scientific and common names of all species mentioned in the Manual, and the second lists equipment and methods relating to rearing and other subject matter.

It will be seen that the present volume supplements Part I of the Manual. The material is presented and indexed in a manner which results in a very usable volume, a volume which should prove very helpful to all entomologists.

W. J. BROWN.

NEWS AND VIEWS
