

## Economics without Borders

If treated as a single economy, the European Union is the largest in the world, with an estimated GDP of over 14 trillion euros. Despite its size, European economic policy has often lagged behind the rest of the world in its ability to generate growth and innovation. Much of the European economic research itself often trails behind that of the United States, which sets much of the agenda in mainstream economics.

This book, also available as open access, bridges the gap between economic research and policy-making by presenting overviews of twelve key areas for future economic policy and research. Written for the economists and policy-makers working within European institutions, it uses comprehensive surveys by Europe's leading scholars in economics and European policy to demonstrate how economic research can contribute to good policy decisions, and vice versa, demonstrating how economics research can be motivated and made relevant by hot policy questions.
