VENESTA PLYWOOD

Wherever it is used, whether for the interior panelling of an Ocean liner—the fuselage of an Aeroplane—a Soldiers' shelter—or a child's doll's house—it means increased efficiency.

NOT only the British and Allied Governments, but *everyone* who has come into contact with *genuine* "Venesta" Plywood knows it for the best and most reliable panel on the market.

It neither Shrinks nor Splits, and is Stronger than ordinary timber twice its thickness.

KINDLY MENTION THIS JOURNAL.

The efficiency of your machine depends upon your clutches and brakes.

Twenty years or so ago we invented Ferodo Fabrics. Since then, we have, by employing skilled engineers and the finest testing plant in the world, greatly improved Ferodo Fabrics, so that to-day they are readily acknowledged to be the finest friction surfaces in the world.

They are entirely unaffected by water, oil or acid, and absorb more foot lbs. of energy per square inch than any other material known. Wood and leather linings char and quickly wear out. Ferodo Fabrics are spark proof and non-inflammable.

Ferodo Fabrics have the name stamped on each foot. Look for it when ordering your new linings.

**OLDBURY
BIRMINGHAM**

Code. A.B.C. 5th Edition.

POINT BY POINT

“TITANINE” DOPE

(Free from Tetrachlorethane and all Spirit derivatives of Chlorine)

Defies Competition.

- ☞ **IMPERVIOUSNESS**—Examine a surface doped with Titanine with a powerful magnifying glass, and see how the fabric is filled in. Try this test with another dope. Try also varnishing over three coats of Titanine and three coats of another dope. Varnish will not penetrate Titanine, as can be seen by examining the back of the fabric. **TITANINE SAVES ONE OR MORE COATS.**
- ☞ **FLEXIBILITY AND ADHESION**—Dope two pieces of similar fabric with Titanine and another dope, bend the two samples backwards and forwards and the greater flexibility of Titanine will be at once noticeable. Titanine after exposure retains its flexibility and adhesion in a remarkable degree, when other dopes lose the greater part of their flexibility and adhesion owing to their brittleness.
- ☞ **RESISTANCE TO FLAME**—Place a burning wax vesta on a frame doped with Titanine, and leave the match to burn completely out. Repeat the test with another dope. The result is convincing.
- ☞ **LIGHTNESS**—Three coats of Titanine, forming the impervious surface mentioned above, weigh less than 2 oz. per sq. yard. Four coats can be reduced to 2 oz., either by dilution with spirit, or by careful and rapid application. Tests will show that weight for weight, Titanine gives the most impervious skin.
- ☞ **RESISTANCE TO OIL AND PETROL**—Mr. J. L. HALL, of the Hall Aviation Co., Hendon, writes:—“The Tractor biplane (coated with Titanine) has now been in constant use for two months, and the canvas is still clean and new looking, in spite of the deteriorating effects of oil, petrol, &c., and the water used in washing down the machine.”
- ☞ **DURABILITY**—The manufacturers of Titanine satisfied themselves, before putting it on the market, that it possessed a durability hitherto quite unknown in dopes.
- ☞ **FINISH**—The matt surface of Titanine affords a firm hold for finishing varnishes and paints, which do not adhere equally well over the glossy surface of most of the other dopes. When no finishing material is applied, Titanine can be polished quickly and inexpensively (and at less than one-fourth the cost of a coat of dope) by means of the Polishing Fluid supplied by the manufacturers.
- ☞ **PRICE**—Let us quote you !

The Leading NON-POISONOUS Dope.
