at the forefront
of cryo innovation...

DIATOME Diamond Knives

DIATOME DIAMOND KNIVES FOR CRYO APPLICATIONS:

cryo 25°, 35°, 45°

Available for wet or dry sectioning.

cryo immuno

The first cryo knife with a diamond platform, guarantees the best possible sectioning for cryo-immuno-chemistry.

histo AFM

Specially tested to ensure that they meet the increased quality requirements of AFM investigation..

histo cryo

Available as boats for wet cryo sectioning, and triangular holders for dry cryo sectioning. Made of a special copper/nickel alloy, which guarantees the best heat/cold transmission.

trimtool 20, 45, and 90

One trimming tool for all of your trimming needs, be it at room or cryo temperatures.

This journal is part of the **Cambridge** Core service. Access to online tables of contents and article abstracts is available to all researchers at no cost. Access to full-text articles online is provided to those with online subscription. Online subscriptions must be activated. Once your subscription is activated, free access to past, present, and forthcoming articles is available at:

***Microscopy and Microanalysis* website: cambridge.org/MAM.**

Instructions for authors submitting manuscripts may be found at cambridge.org/MAM. Select "Further Information" then select "Instructions for Contributors."

Microscopy and Microanalysis publishes original research papers dealing with a broad range of topics in microscopy and microanalysis. These include articles describing new techniques or instrumentation and their applications, as well as papers in which established methods of microscopy or microanalysis are applied to important problems in the fields of biology or materials science. Microscopy and microanalysis are defined here in a broad sense, and include all current and developing approaches to the imaging and analysis of microstructure. The criteria for acceptance of manuscripts are the originality and significance of the research, the quality of the microscopy or microanalysis involved, and the interest for our readership.

Four types of communications are published in the Journal. **Regular Articles** are of substantial length and describe the findings of an original research project that satisfies the aims and scope of the Journal, described above. **Review Articles** summarize the current status of an important area within the aims and scope of the Journal. **Letters to the Editor** usually contain comments on recent articles that have appeared in the Journal. **Book Reviews** are also published, but these are solicited only through the Book Review Editor.

Instructions for Contributors

Instructions for authors contributing manuscripts may be found at <http://mc.manuscriptcentral.com/mam> under "Resources: Instructions and Forms." Authors may also visit cambridge.org/mam, select "Information," and then select "Instructions for Contributors."

Copyright Information

Submission of a manuscript implies: that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as by the responsible authorities at the institute where the work has been carried out; that, if and when the manuscript is accepted for publication, the authors agree to automatic transfer of the copyright to the Microscopy Society of America; that the manuscript will not be published elsewhere in any language without the consent of the copyright holders; and that written permission of the copyright holder is obtained by the authors for material used from other copyrighted sources.

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission from the publisher.

The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names lack protection by the relevant laws and regulation.

Authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by Cambridge University Press, provided that the appropriate fee is paid directly to Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, USA [Tel: (508) 750-8400], stating the ISSN (1431-9276), the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

Disclaimer

The Microscopy Society of America, the other societies stated, and Cambridge University Press cannot be held responsible for errors or for any consequences arising from the use of the information contained in this journal. The appearance of scientific reports and/or workshops, or any other material in *Microscopy and Microanalysis* does not constitute an endorsement or approval by The Microscopy Society of America of the findings, data, conclusions, recommendations, procedures, results, or any other aspect of the content of such articles. The appearance of advertising in *Microscopy and Microanalysis* does not constitute an endorsement or approval by The Microscopy Society of America of the

quality or value of the products advertised or any of the claims, data, conclusions, recommendations, procedures, results, or any other information included in the advertisements.

While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors, the editors, nor the publisher can accept any legal responsibility for any errors or omissions that may be made.

Subscription Information

Microscopy and Microanalysis is published bimonthly in February, April, June, August, October, and December by Cambridge University Press (1 Liberty Plaza, New York, NY 10006). Three supplements (*Meeting Guide*, *Program Guide*, and *Proceedings*) are published in June and August.

Society Rates: Members of the Microscopy Society of America should contact the MSA Business Office for all subscription inquiries: Microscopy Society of America, 11130 Sunrise Valley Dr, Suite 350, Reston, VA 20191, Tel.: (703) 234-4115, Email: associationmanagement@microscopy.org, URL: www.microscopy.org. Members of other affiliated societies should contact their respective society business offices for all subscription inquiries.

Subscription Rates: Institutions print and electronic: US \$2465.00 in the USA, Canada, and Mexico; UK £1483.00+VAT elsewhere. Institutions online only: US \$1599.00 in the USA, Canada, and Mexico; UK £968.00 + VAT elsewhere. Individuals print plus online: US \$721.00 in the USA, Canada, and Mexico; UK £438.00+VAT elsewhere. Prices include postage and insurance.

USA, Canada, and Mexico: Subscribers in the USA, Canada, and Mexico should send their orders, with payment in US dollars or the equivalent value in Canadian dollars, to: Cambridge University Press, Customer Services Department (Journals), 1 Liberty Plaza, New York, NY 10006, USA. Tel: (845) 353-7500. Fax: (845) 353-4141. Orders may be phoned direct (toll free): (800) 872-7423. E-mail: journals_subscriptions@cup.org.

Outside North America: Subscribers elsewhere should send their orders, with payment in sterling, to: Customer Services Department (Journals), Cambridge University Press, University Printing House, Shaftesbury Road, Cambridge CB2 8BS, UK. Tel: +44 (0)1223 326070. Fax: 44 (0) 1223 325150. E-mail: journals@cambridge.org

Change of address: Allow six weeks for all changes to become effective. All communications should include both old and new addresses (with postal codes) and should be accompanied by a mailing label from a recent issue. Society members should contact their respective society business offices to inform them of address changes.

High-Fidelity EBSD Analysis

Clarity EBSD Analysis System

The world's first commercial direct detection system to produce high-fidelity EBSD patterns. This revolutionary system eliminates detector noise and distortions, opening new doors to unparalleled EBSD pattern quality and sensitivity.

- Direct electron detection of EBSD patterns
- Zero distortion for ultimate sharpness and maximum details
- No read noise for high sensitivity
- Single-electron detection
- True quantitative intensity measurements
- Ideal for beam-sensitive materials and HR-EBSD

For more information about the Clarity EBSD Analysis System, visit edax.com/clarity.

Microscopy AND Microanalysis

An International Journal for the Biological and Physical Sciences

Volume 27, Number 3

June 2021

On the Cover: Example images of second harmonic generation (SHG) and coherent anti-Stokes Raman scattering (CARS) microscopy from the manuscript by Hung et al. on page 594. SHG and CARS images are used in combination to image crosslinked collagen in bone-engineered materials. The characteristics of label-free detection and structural specificity facilitate the study of collagen crosslinking for different crosslinking methods. With the measured parameters on the non-linear optical images, the collagen structure at molecular and macromolecular scales can now be analyzed and quantified.

MATERIALS SCIENCE APPLICATIONS

Radiolysis-Induced Crystallization of Sodium Chloride in Acetone by Electron Beam Irradiation

Tomoya Yamazaki and Yuki Kimura

Innovation with Integrity

Nanomechanical Testing

Au-Flat™

Gold foil sample supports for Cryo-EM

Reconstruction with less data

Au-Flat significantly reduces beam-induced motion during imaging, improving image quality and resolution.

Uniform vitreous ice across the grid

Au-Flat uses new, ultra-flat precision gold grids which create a more planar surface. The result is **more uniform thin ice** across the entire surface, including areas near the grid bars.

Accurate defocus

The smaller grain size of the gold film provides more features to focus on, leading to **more accurate** defocus during data collection.

Durable

The ultra-thin biocompatible Au-Pd film is supported by a **thicker gold grid** to improve strength during handling and sample prep, while its wider rim provides safer tweezer handling. We have also optimized our Au-Pd film stress to **maximize strength** during sample prep and vitrification.

No mistakes

The lighter color of the Au-Pd film compared to the underlying gold mesh grid makes it **easy to identify the film side** of the grid during sample preparation.

Au/Pd Foil Side

Gold Mesh Side

Prove it to yourself...

EMS has it!
