# CONTENTS

	PAGE
ANDREW, F. On the Dvoretzky–Rogers theorem	105
BELL, A. M., BROWN, M. B. AND FRASER, G.A. The tensor product of distributive lattices: structural results	237
BINDING, P. Indicial equivalents of multiparameter definiteness conditions in finite dimensions	283
BOOK REVIEWS	103, 235, 345
BORWEIN, J. M. AND YOST, D. T. Absolute norms on vector lattices	215
BRUCE, J. W. AND HURLEY, D. J. Focal sets in certain Riemannian manifolds	209
CLAPHAM, C. R. J. An easier enumeration of self-complementary graphs	181
COLTON, D. The strong maximum principle for the heat equation	297
COUTY, D. Sur l’image d’une fonction entière de deux variables complexes	327
COXETER, H. S. M. Surprising relationships among unitary reflection groups	185
EDGE, W. L. Fricke’s octavic curve	91
FRANCHI, F. Growth estimates in linear elasticity with a sublinear body force without definiteness conditions on the elasticities	223
FRASER, G. A. AND ALBERT, J. P. Associativity of the tensor product of semilattices	337
GORDON, A. D. Young tableaux and longest monotone subsequences: An inequality and a conjecture	341
HASSAN, H. S. On the set of periodic solutions of differential equations of Riccati type	195
HOLGATE, P. Free non-associative principal train algebras	313
KAARLI, K. On radicals of finite near-rings	247
KARANASIOS, S. On certain commuting families of rank one operators	115
KARPILOVSKY, G. On extension of characters from normal subgroups	7
KLEINMAN, R. E. AND ROACH, G. F. On the unique solvability of a class of modified boundary integral equations	303
KOSHITANI, S. On lower bounds for the radical of a block ideal in a finite $p$ -solvable group	65
KYE, SEUNG-HYEOK. Counterexamples in intersections for $C^*$ -tensor products	301
LAMB, W. Fractional powers of operators defined on a Fréchet space	165
LEUNG, A. W. Nonlinear density-dependent diffusion for competing species interactions: Large-time asymptotic behaviour	131

LIGHT, W. A. AND HOLLAND, S. M. The $L_1$ -version of the Diliberto-Straus algorithm in $C(T \times S)$	31
MACKIE, A. G. A critique for shallow water theory	153
MAXSON, C. J. AND OSWALD, A. The centralizer of the general linear group	73
MOTOSE, K. On a result of S. Koshitani	57
MURTY, C. V. L. N. Generalized near-fields	21
MURTY, C. V. L. N. A note on left bipotent near-rings	151
NASIM, C. AND AGGARWALA, B. D. On the generalized heat-equation	261
ÔTA, S. Closed linear operators with domain containing their range	229
PETTET, M. Partitioned groups and the additive structure of centralizer near-rings	47
POPOOLA, J. O. AND TWEDDLE, I. Stability of barrelledness and related concepts in topological vector spaces	321
PUCZYŁOWSKI, E. R. On semisimple classes of associative and alternative rings	1
RAUSSEN, M. Non-orthogonalisable vector fields on spheres	275
REDDY, Y. V. AND MURTY, C. V. L. N. On strongly regular near-rings	61
ROBERTSON, E. F. AND WILLIAMS, P. D. A presentation of $PGL(2, p)$ with three defining relations	145
ROBINSON, D. J. S. Groups with prescribed automorphism group: A clarification	59
SMITH, L. AND SWITZER, R. M. Polynomial algebras over the Steenrod algebra: Variations on theorem of Adams and Wilkerson	11
TZINTZIS, G. On the mutagenic radical property	333
WALKER, G. AND WOOD, R. M. W. Low codimensional embeddings of $Sp(n)$ and $SU(n)$	25

**SCOTTISH ACADEMIC PRESS**

*Texts in Mathematics*

Edited by Professor W. N. Everitt of the University of Dundee and Professor A. Jeffrey of the University of Newcastle upon Tyne.

A series designed for mathematical students in their final year, postgraduate students and research workers.

**THE SPECTRAL THEORY OF PERIODIC DIFFERENTIAL EQUATIONS**

M. S. P. Eastham

*Reader in Mathematical Analysis, University of London*

The text is the first connected account of a body of results, relating in particular to eigenvalue and spectral theory, which has been developed in the *Mathematical Journals* over the past twenty years.

"The book can be strongly recommended to mathematicians and physicists at post-graduate level who want to reach a well-worked yet little-known frontier."

*Times Higher Education Supplement*

144 pp.

£5.00

**ANALYTICAL METHODS OF OPTIMIZATION**

D. F. Lawden

*University of Aston in Birmingham*

The scope of this book is essentially that of the classical theory of the calculus of variations, cast into a form which is most suitable for application to modern problems of optimizing the behaviour of engineering systems. All methods and principles are illustrated by worked problems, and there are sets of exercises at the end of each chapter. The book is suitable for final year applied mathematicians and for use as a text by all post-graduate students making a special study of systems theory.

164 pp.

£5.50

**THEORY AND APPLICATION OF THE BOLTZMANN EQUATION**

Carlo Cercignani

*Institute of Mathematics, The Polytechnic of Milan*

The book presents a unified approach to recent developments in the fields of electron transport in plasmas; neutron transport in solids and plasmas, and in nuclear reactors; phonon transports in superfluids and radiative transfer in planetary and stellar atmospheres. The main line of exposition is tied to the classical equation established by Boltzmann which still forms the basis for the kinetic theory of gases.

432 pp.

£15.00
