

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}_{\mathcal{M}}\mathcal{S}\text{-T}_{\mathcal{E}}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}_{\mathcal{M}}\mathcal{S}\text{-T}_{\mathcal{E}}\mathcal{X}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.oz.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Weighted normal numbers

Geon H. Choe 177

A note on resonance problems with nonlinearity bounded in one direction

To Fu Ma and Luís Sanchez 183

Morita duality and finitely group-graded rings

Shenggui Zhang 189

On the magnitude of integer points on elliptic curves

Ákos Pintér 195

Approximate polyhedra, density and discrete maps

Antonio Giraldo and Jose M.R. Sanjurjo 201

Strong barrelledness properties in $B(\Sigma, X)$

J.C. Ferrando and L.M. Sánchez Ruiz 207

Unicity theorems for meromorphic or entire functions II

Hong-Xun Yi 215

Remarks on symmetric smooth norms

P. Hájek and V. Zizler 225

Simple modules over the coordinate ring of quantum affine space

Kangju Min and Sei-Qwon Oh 231

Some utility theorems on inductive limits of preordered topological spaces

J.C. Candeal, E. Indurain and G.B. Mehta 235

On Ky Fan's covering theorems for simplexes

Chung-Wei Ha 247

Soluble and linear repetitive groups

A.V. Kelarev and P.V. Shumyatsky 253

Partial clones containing all permutations

Lucien Haddad and Ivo G. Rosenberg 263

Remarks on a measure of weak noncompactness in the Lebesgue space

Józef Banaś and Kishin Sadarangani 279

Curvature evolution of plane curves with prescribed opening angle

Naoyuki Ishimura 287

Free Abelian topological groups and the Pontryagin-Van Kampen duality

Vladimir Pestov 297

On the splitting field of the Alexander polynomial of a periodic knot

Jonathan A. Hillman 313

Discrete product systems with twisted units

Marcelo Laca 317

A note on amenable algebras of operators

P.C. Curtis, Jr. and R.J. Loy 327

Finding Eisenstein elements in cyclic number fields of odd prime degree

Vincenzo Acciario 331

An extension of the generalised Schur inequality

B. Mond and J.E. Pečarić 341

Groups with no nontrivial linear representations: Corrigenda

A.J. Berrick 345

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Images of hyperbolic reflection groups

Brent Everitt 347

Results on fractional parts of linear functions of n and applications to Beatty sequences

Takao Komatsu 349
