ANNUAL REVIEWS

The Essential Resource for Chemical and Biomolecular Engineers

Annual Reviews offers comprehensive, timely collections of critical, topical reviews written by acknowledged experts. Annual Reviews journals examine 40 focused disciplines within the Biomedical, Life, Physical, and Social Sciences. Our Editorial Committees are specialists in selecting and synthesizing literature into concise, insightful review articles. As a result, Annual Reviews journals are among the most highly cited in scientific literature and are consistently ranked within the top ten of journals for their disciplines as indexed by the ISI® Journal Citation Reports (JCR®).

Annual Review of Chemical and Biomolecular Engineering

Vol. 1 • July 2010 • Online & In Print • <http://chemeng.annualreviews.org>

Editor: John M. Prausnitz, *University of California, Berkeley*

The *Annual Review of Chemical and Biomolecular Engineering* will provide a perspective on the broad field of chemical (and related) engineering. It will address advances in applied chemistry and biology, with a focus on concepts, old and new materials, and/or processes. The series will draw from disciplines as diverse as biology, physics, and engineering, with development of chemical products and processes as the unifying theme.

This journal is of direct interest to those with a general background in the natural sciences as well as for a broad range of scientists concerned with the physical, chemical, and biological properties of materials encountered in the contemporary and future chemical industries.

Access this and all Annual Reviews journals via your institution's subscription at www.annualreviews.org

Personal copies available at a reduced rate. Institutional site license options available. Contact Annual Reviews for details.

JOURNALS

Knowledge is no longer shelved

The *Cambridge Journals Digital Archive* contains more than 160 journals, more than 3 million pages and more than 8 million linked references. Knowledge is now more visible and more searchable than ever.
