

## LETTER TO THE EDITOR

TO THE EDITOR,

*The Journal of Laryngology and Otology.*

SIR,—In the last issue of the Journal an abstract of the work done by Leon Gillis and myself was published.

May I point out that the reference to the treatment of presbycusis should make clear that it is the homœogenic hormone which is of value, and not the heterogenic hormone as published. In fact one has found that the administration of the heterogenic hormone makes the patient's condition worse.

I am, yours sincerely,

J. BERNSTIEN.

*March 19th, 1940.*
