The Cambridge Encyclopedia of Human Evolution

Edited by STEVE JONES, ROBERT D. MARTIN and DAVID R. PILBEAM
Executive Editor: SARAH BUNNEY Foreword by RICHARD DAWKINS

**The most complete guide to the development of the human species
ever produced in just one book**

- Thoroughly comprehensive, covering everything from genetics, primatology and fossil origins to human biology, ecology, brain function and behaviour, demography and disease
- Distinguished volume editors, including Steve Jones, 1991 BBC Reith Lecturer
- Over 70 internationally renowned contributors
- Over 500 superb photographs, line diagrams and maps and boxes highlighting key issues and techniques throughout

From the foreword by Richard Dawkins, author of *The Selfish Gene* and *The Blind Watchmaker* . . .

‘What an encyclopedia this is! You can read it confident that you are getting the authoritative, well-informed and up-to-date view of qualified experts. I recommend it with enthusiasm.

If you were allowed to take only one book to a desert island (the Bible and Shakespeare already provided), this Encyclopedia would be a serious candidate.’
