Editor
David C. Brown, Worcester Polytechnic Institute, USA

This journal publishes original articles about significant AI theory and applications based on the most up-to-date research in all branches of phases of engineering. Suitable topics include: analysis and evaluation; selection; configuration and design; manufacturing and assembly; and concurrent engineering.

Editors
Peter McBurney, University of Liverpool, UK
Simon Parsons, Brooklyn College, City University of New York, USA

The Knowledge Engineering Review is committed to the development of the field of artificial intelligence and the clarification and dissemination of its methods and concepts.

The Journal publishes analyses – high quality surveys providing balanced but critical presentations of the primary concepts in an area; technical tutorials – detailed introductions to an area; application and country surveys commentaries and debates; book reviews; and a popular 'from the journals' section, giving the contents of current journals in theoretical and applied artificial intelligence.

Editors-In-Chief
Matthias Felleise, Northeastern University, USA
Xavier Leroy, INRIA Rocquencourt, France

Journal of Functional Programming is the only journal devoted solely to the design implementation and application of functional programming languages, spanning the range from mathematical theory to industrial practice. Coverage includes functional languages and extensions,implementation techniques, reasoning and proof, program transformation and synthesis, type theory, parallelism and applications.

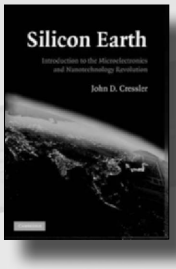
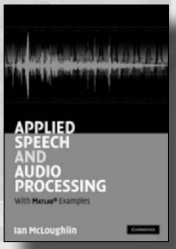
CAMBRIDGE

New and Exciting Titles!



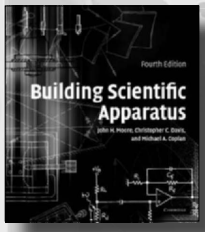
Silicon Earth
Introduction to Microelectronics and Nanotechnology Revolution
John D. Cressler
$120.00: Hb: 978-0-521-87939-2: 508 pp.
$65.00: Pb: 978-0-521-70505-9

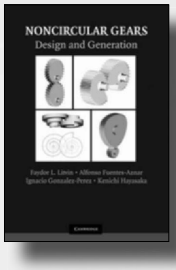


Applied Speech and Audio Processing
With Matlab Examples
Ian McLoughlin
$54.00: Hb: 978-0-521-51954-0: 216 pp.

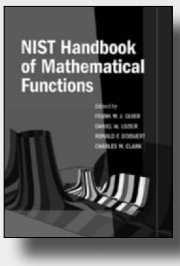
Computational Principles of Mobile Robotics
2nd Edition!
Gregory Dudek
Michael Jenkin
$99.00: Hb: 978-0-521-87157-0: 432 pp.
$49.99: Pb: 978-0-521-69212-0

Building Scientific Apparatus
4th Edition!
John H. Moore,
Christopher C. Davis,
Michael A. Coplan,
Sandra C. Greer
$80.00: Hb: 978-0-521-87858-6: 662 pp.



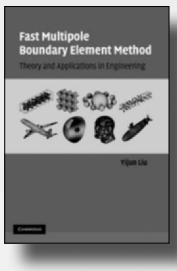


Noncircular Gears
Design and Generation
Faydor L. Litvin,
Alfonso Fuentes-Aznar,
Ignacio Gonzãlez-Perez,
Kenichi Hayasaka
$110.00: Hb: 978-0-521-76170-3: 214 pp.

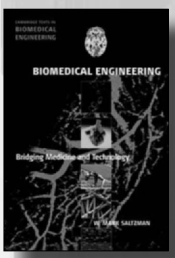


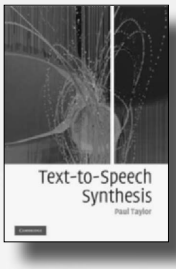
NIST Handbook of Mathematical Functions
Companion to the Digital Library of Mathematical Functions
Edited by Frank W. J. Olver,
Daniel W. Lozier, Ronald F. Boisvert,
Charles W. Clark
$99.00: Hb: 978-0-521-19225-5: 966 pp.
$50.00: Pb: 978-0-521-14063-8

Fast Multipole Boundary Element Method
Theory and Applications in Engineering
Yijun Liu
$85.00: Hb: 978-0-521-11659-6: 254 pp.

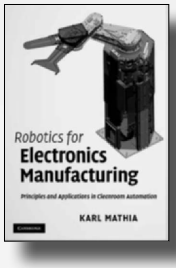


Biomedical Engineering
Bridging Medicine and Technology
W. Mark Saltzman
Cambridge Texts in Biomedical Engineering
$95.00: Hb: 978-0-521-84099-6: 656 pp.





Text-to-Speech Synthesis
Paul Taylor
$90.00: Hb: 978-0-521-89927-7: 626 pp.



Robotics for Electronics Manufacturing
Principles and Applications in Cleanroom Automation
Karl Mathia
$130.00: Hb: 978-0-521-87652-0: 240 pp.

Biomimetic Robotics
Mechanisms and Control
Ranjan Vepa
$99.00: Hb: 978-0-521-89594-1: 360 pp.

Prices subject to change.

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigourous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by Robotica should be submitted electronically, using the Manuscript Central System, via http://mc.manuscriptcentral.com/cup/robotica. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other files types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (gregc@jhu.edu) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However, most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972); C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **28** Part **2** March 2010

Special issue
Surgical Robotics: System Development, Application Study and Performance Analysis
Guest Editor Professor Jian S. Dai

Editorial: Surgical robotics and its development and progress, **Jian S Dai** 161

Robotic surgery: from autonomous systems to intelligent tools, **Ferdinando Rodriguez y Baena and Brian Davies** 163

A reconfigurable modular robotic endoluminal surgical system: vision and preliminary results, **Kanako Harada, Denny Oetomo, Ekawahyu Susilo, Arianna Menciassi, David Daney, Jean-Pierre Merlet and Paolo Dario** 171

Toward lean minimally invasive robotic surgery, **Matteo Zoppi, Mohammed Aamir Khan, Felix Schäfer and Rezia Molfino** 185

Robotic magnetic steering and locomotion of capsule endoscope for diagnostic and surgical endoluminal procedures, **Gastone Ciuti, Pietro Valdastri, Arianna Menciassi and Paolo Dario** 199

An ultrasound-directed robotic system for microwave ablation of liver cancer, **Qiang Huang, Gui-bin Bian, Xing-guang Duan, Hong-hua Zhao and Ping Liang** 209

Robot-assisted MRI-guided prostatic interventions, **Andrew A. Goldenberg, John Trachtenberg, Yang Yi, Robert Weersink, Marshall S. Sussman, Masoom Haider, Liang Ma and Walter Kucharczyk** 215

Robotic urological surgery, **Prokar Dasgupta and Alastair Henderson** 235

Suturing and tying knots assisted by a surgical robot system in laryngeal MIS, **Huijuan Wang, Shuxin Wang, Jienan Ding and Haifeng Luo** 241

A hybrid robot system for CT-guided surgery, **Da Liu, Tianmiao Wang, Can Tang and Fan Zhang** 253

Development and testing of fMRI-compatible haptic interface, **Ales Hribar and Marko Munih** 259

Virtual fixtures with autonomous error compensation for human–robot cooperative tasks, **Raúl A. Castillo-Cruces and Jürgen Wahrburg** 267

Toward an optimal performance index for neurosurgical robot's design, **Alessandro Gasparetto and Vanni Zanotto** 279

A methodology for design and appraisal of surgical robotic systems, **Michael D. O'Toole, Kaddour Bouazza-Marouf, David Kerr, Mahendra Gooroochurn and Michael Vloeberghs** 297

Modeling of blade sharpness and compression cut of biomaterials, **Debao Zhou and Gary McMurray** 311

Articular human joint modelling, **Ibrahim I. Esat and Neviman Ozada** 321
