

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to
The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}_{\mathcal{M}\mathcal{S}}\text{-T}_{\mathcal{E}\mathcal{X}}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}_{\mathcal{M}\mathcal{S}}\text{-T}_{\mathcal{E}\mathcal{X}}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.oz.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Groups with no nontrivial linear representations	
A.J. Berrick	1
On the meromorphic solutions of some functional equations	
Jianhua Chen, Jianyong Qiao and Wenjun Zhang	13
Group extensions are quasi-simply-filtrated	
S.G. Brick and M.L. Mihalik	21
The submodule structure of the quantum symmetric powers	
Lars Thams	29
On a theorem of Hughes and Thompson	
R.A. Bryce	41
A nil-implies-nilpotent result in linearly compact rings	
Weimin Xue	49
Norms of powers in the Volterra algebra	
Michel Solovej	55
Continuity of the superposition operator on Orlicz-Sobolev spaces	
G. Hardy and H.B. Thompson	59
Some coincidence theorems and applications	
Xie Ping Ding and E. Tarafdar	73
Towards a calculus of algorithms	
M. Bulmer, D. Fearnley-Sander and T. Stokes	81
The set of idempotents of a completely regular semigroup as a binary algebra	
Raymond Broeksteeg	91
On the Pettis measurability theorem	
Dietrich Helmer	109
A simple proof of an identity of Pethe and Horadam	
Kuo-Jye Chen	117
Second-order normal vectors to a convex epigraph	
Alberto Seeger	123
Analysis on superspace: an overview	
Vladimir G. Pestov	135
Convergence of relaxed chaotic parallel iterative methods	
Peter E. Kloeden and Dong-Jin Yuan	167
