Lost Words

Narratives of Language and the Brain, 1825–1926

L. S. Jacyna

In the mid-nineteenth century, physicians observed numerous cases in which individuals lost the ability to form spoken words, even as they remained otherwise healthy. By studying this condition, which came to be known as “aphasia,” neurologists were able to show that functions of mind were rooted in localized areas of the brain. Here L. S. Jacyna analyzes medical writings on aphasia to illuminate modern scientific discourse on the relations between language and the brain.

“The book presents a set of strategies for reading not only texts about aphasia but also medical literature in general.”—Kurt Danziger

Cloth \$45.00 £28.50 ISBN 0-691-00413-7 Due October

New in paperback

Making the Body Beautiful

A Cultural History of Aesthetic Surgery

Sander L. Gilman

This is a profound, provocative, and engaging study of how humans have sought to change their lives by transforming their bodies.

“A [wide-ranging] and enjoyable work. . . . Gilman has an eye for detail, yet remains aware of the wider perspective. . . . Fascinating. . . . Rich, elegant and beautiful.”—*The Times Literary Supplement*

95 halftones.

Paper \$16.95 £10.50 ISBN 0-691-07053-9 Due January

New in paperback

How Scientists Explain Disease

Paul Thagard

Ranging through the history of medicine, from the Hippocratic theory of humors to modern explanations of Mad Cow Disease and chronic fatigue syndrome, *How Scientists Explain Disease* examines the development and acceptance of scientific ideas.

“It has been a long time since I read a book as important as this, and more importantly, it has been a long time since I read a scholarly book which gave me such simple pleasure.”—Michael Ruse

Paper \$17.95 £11.50 ISBN 0-691-05083-X

Paper Bodies: A Catalogue of Anatomical Fugitive Sheets, 1538–1687

ANDREA CARLINO

By their nature ephemeral, few copies survive of these unusual images with flaps under which are revealed the internal organs of both male and female bodies. In a lengthy, worldwide search, Andrea Carlino has discovered 62, all of which are listed and reproduced in this lavishly illustrated catalogue. In his Introduction, Carlino discusses the sixteenth and seventeenth-century popular market for which these prints were produced, the social, cultural and medical context in which they were created, as well as their uses and functions. This intriguing and original study will be of great interest to historians of medicine and of printing.

Medical History, Supplement No. 19
368 pages, 187 black and white illustrations
ISBN 0 85484 69 9
£35 or US\$55 (inclusive of p&p)

How the Idea of Profession Changed the Writing of Medical History

JOHN BURNHAM

"Burnham provides an erudite and insightful overview of the rise of the concept of the medical profession...what emerges is a tripartite dialogue of physicians, sociologists and historians... this lucid and pioneering contribution...does much to promote a more reflective and sophisticated approach to studies of professional expertise in the spheres of health and welfare."
– Paul Weindling

"The book will create discussion and debate largely because it has elucidated the issues so cogently. It can be very strongly recommended to all medical historians and as a reading in graduate seminars." – William G Rothstein
