Volume 49 Number 1

Research Papers

- 1 DENIS BELOMESTNY AND VOLKER KRÄTSCHMER. Central limit theorems for law-invariant coherent risk measures
- 22 SÖREN CHRISTENSEN. Phase-type distributions and optimal stopping for autoregressive processes
- 40 PETER BUCHHOLZ AND MIKLÓS TELEK. Rational processes related to communicating Markov processes
- 60 OLE STENZEL AND HANS DADUNA. Weak convergence limits for closed cyclic networks of queues with multiple bottleneck nodes
- 84 ALEXANDRE BRANDWAJN AND THOMAS BEGIN. A recurrent solution of PH/M/c/N-like and PH/M/c-like queues
- 100 HERMINE BIERMÉ AND AGNÈS DESOLNEUX. A Fourier approach for the level crossings of shot noise processes with jumps
- 114 BRUNO JEDYNAK, PETER I. FRAZIER AND RAPHAEL SZNITMAN. Twenty questions with noise: Bayes optimal policies for entropy loss
- 137 DAMIEN LAMBERTON AND MOHAMMED MIKOU. The smooth-fit property in an exponential Lévy model
- 150 ANDREAS E. KYPRIANOU, RONNIE LOEFFEN AND JOSÉ-LUIS PÉREZ. Optimal control with absolutely continuous strategies for spectrally negative Lévy processes
- 167 BORIS BAEUMER AND MIHÁLY KOVÁCS. Approximating multivariate tempered stable processes
- 184 PATRIK ANDERSSON. Card counting in continuous time
- 199 JAMES C. FU, TUNG-LUNG WU AND W. Y. WENDY LOU. Continuous, discrete, and conditional scan statistics
- 210 MAMADOU BA, ETIENNE PARDOUX AND AHMADOU BAMBA SOW. Binary trees, exploration processes, and an extended Ray–Knight theorem
- 226 ZAKHAR KABLUCHKO. Persistence and equilibria of branching populations with exponential intensity
- 245 ACHIM WÜBKER. Spectral theory for weakly reversible Markov chains
- 266 LASSE LESKELÄ AND HARRI VARPANEN. Juggler’s exclusion process
- 280 YUQIANG LI. Moderate deviations for stable random walks in random scenery

Short Communications

- 295 PEPA RAMÍREZ-COBO AND EMILIO CARRIZOSA. A note on the dependence structure of the two-state Markovian arrival process

Research Papers

- 303 L. B. KLEBANOV, A. V. KAKOSYAN, S. T. RACHEV AND G. TEMNOV. On a class of distributions stable under random summation
- 319 EMILIO DE SANTIS AND MAURO PICCIONI. Backward coalescence times for perfect simulation of chains with infinite memory
- 338 JEAN-MARC DERRIEN AND FRÉDÉRIQUE PLANTEVIN. A symmetry property for a class of random walks in stationary random environments on \mathbb{Z}
- 351 K. BOROVKOV AND G. LAST. On Rice's formula for stationary multivariate piecewise smooth processes
- 364 ANNE-LAURE FOUGERES AND CECILE MERCADIER. Risk measures and multivariate extensions of Breiman's theorem
- 385 S. GOLIFORUSHANI, M. ASADI AND N. BALAKRISHNAN. On the residual and inactivity times of the components of used coherent systems
- 405 JI HWAN CHA AND MASSIMILIANO GIORGIO. A note on the failure rates in finite mixed populations
- 416 ILYA GERTSBAKH, YOSEPH SHPUNGIN AND FABIO SPIZZICHINO. Two-dimensional signatures
- 430 GIOVANNI PUCCETTI, BIN WANG AND RUODU WANG. Advances in complete mixability
- 441 RICHARD FINLAY, EUGENE SENETA AND DINGCHENG WANG. An inverse gamma activity time process with noninteger parameters and a self-similar limit
- 451 BARLAS OGUZ AND VENKAT ANANTHARAM. Hurst index of functions of long-range-dependent Markov chains
- 472 THOMAS HOUSE. Lie algebra solution of population models based on time-inhomogeneous Markov chains
- 482 EMMANUEL BACRY, LAURENT DUVERNET AND JEAN-FRANÇOIS MUZY. Continuous-time skewed multifractal processes as a model for financial returns
- 503 DAVID K. GEORGE, CATHY H. XIA AND MARK S. SQUILLANTE. Exact-order asymptotic analysis for closed queueing networks
- 521 R. MCVINISH AND P. K. POLLETT. A central limit theorem for a discrete-time SIS model with individual variation
- 531 YUAN-CHUNG SHEU AND MING-YAO TSAI. On optimal stopping problems for matrix-exponential jump-diffusion processes
- 549 LOTHAR BREUER. Occupation times for Markov-modulated Brownian motion
- 566 GÖTZ OLAF MUNSONIUS. On tail bounds for random recursive trees

Short Communications

- 582 DIMITRIOS G. PANDELIS AND MARK P. VAN OYEN. Sample path optimal policies for serial lines with flexible workers
- 590 AIDAN SUDBURY. Means and variances in stochastic multistage cancer models
- 595 Obituary: Miloslav Jiřina

Research Papers

- 601 MINDAUGAS BLOZNELIS, FRIEDRICH GÖTZE AND JERZY JAWORSKI. Birth of a strongly connected giant in an inhomogeneous random digraph
- 612 BORIS L. GRANOVSKY AND ALEXANDER V. KRYVOSHAEV. Coagulation processes with Gibbsian time evolution
- 627 K. B. ATHREYA. Coalescence in critical and subcritical Galton–Watson branching processes
- 639 SOPHIE HAUTPHENNE. Extinction probabilities of supercritical decomposable branching processes
- 652 MING FANG. Tightness for maxima of generalized branching random walks
- 671 A. E. KYPRIANOU, A. MURILLO-SALAS AND J. L. PÉREZ. An application of the backbone decomposition to supercritical super-Brownian motion with a barrier
- 685 THILANKA APPUHAMILLAGAGE AND DANIEL SHELDON. First passage time of skew Brownian motion
- 697 LOTHAR BREUER. Exit problems for reflected Markov-modulated Brownian motion
- 710 VICTOR F. ARAMAN AND PETER W. GLYNN. Fractional Brownian motion with $H < \frac{1}{2}$ as a limit of scheduled traffic
- 719 JORGE LITTIN C. Uniqueness of quasistationary distributions and discrete spectra when ∞ is an entrance boundary and 0 is singular
- 731 WENBO V. LI AND VLADISLAV V. VYSOTSKY. Probabilities of competing binomial random variables
- 745 MAX SKIPPER. A Pólya approximation to the Poisson-binomial law
- 758 FRED W. HUFFER AND JAYARAM SETHURAMAN. Joint distributions of counts of strings in finite Bernoulli sequences
- 773 SVANTE JANSON AND SVANTE LINUSSON. The probability of the Alabama paradox
- 795 RYAN MARTIN AND OMKAR TILAK. On ε -optimality of the pursuit learning algorithm
- 806 PIETER C. ALLAART. Predicting the supremum: optimality of ‘stop at once or not at all’
- 821 ABBA M. KRIEGER AND ESTER SAMUEL-CAHN. The noisy secretary problem and some results on extreme concomitant variables
- 838 OSCAR LÓPEZ AND NIKITA RATANOV. Option pricing driven by a telegraph process with random jumps
- 850 DAOUD BSHOUTY, ANTONIO DI CRESCENZO, BARBARA MARTINUCCI AND SHELEMYAHU ZACKS. Generalized telegraph process with random delays
- 866 CAROLE BERNARD, XIAO JIANG AND STEVEN VANDUFFEL. A note on ‘Improved Fréchet bounds and model-free pricing of multi-asset options’ by Tankov (2011)

Short Communications

- 876 BRIAN FRALIX AND COLIN GALLAGHER. A new proof of the Wiener–Hopf factorization via Basu’s theorem
- 883 OFFER KELLA. The class of distributions associated with the generalized Pollaczek–Khinchine formula
- 888 J. THEODORE COX AND RINALDO B. SCHINAZI. A branching process for virus survival
- 895 SHELDON M. ROSS. Distribution of minimal path lengths when edge lengths are independent heterogeneous exponential random variables

Volume 49 Number 4

The 2011 Applied Probability Trust Lecture

- 901 JEAN JACOD, CLAUDIA KLÜPPELBERG AND GERNOT MÜLLER. Functional relationships between price and volatility jumps and their consequences for discretely observed data

Research Papers

- 915 MARTIN JACOBSEN. The time to ruin in some additive risk models with random premium rates
- 939 XUEMIAO HAO AND QIHE TANG. Asymptotic ruin probabilities for a bivariate Lévy-driven risk model with heavy-tailed claims and risky investments
- 954 R. ROMERA AND W. RUNGALDIER. Ruin probabilities in a finite-horizon risk model with investment and reinsurance
- 967 LEO SHEN AND ROBERT ELLIOTT. Optimal design of dynamic default risk measures
- 978 HUI JIANG. Berry–Esseen bounds and the law of the iterated logarithm for estimators of parameters in an Ornstein–Uhlenbeck process with linear drift
- 990 JIAN WANG. On the exponential ergodicity of Lévy-driven Ornstein–Uhlenbeck processes
- 1005 ANDREAS E. KYPRIANOU AND CURDIN OTT. Spectrally negative Lévy processes perturbed by functionals of their running supremum
- 1015 MICHAEL GRABCHAK. On a new class of tempered stable distributions: moments and regular variation
- 1036 DAMIAN CLANCY. Approximating quasistationary distributions of birth–death processes
- 1052 ESA HYYTIÄ, SAMULI AALTO, ALEKSI PENTTINEN AND JORMA VIRTAMO. On the value function of the M/G/1 FCFS and LCFS queues
- 1072 TOMÁS PRIETO-RUMEAU AND ONÉSIMO HERNÁNDEZ-LERMA. Discounted continuous-time controlled Markov chains: convergence of control models
- 1091 MARTIAL LONGLA, COSTEL PELIGRAD AND MAGDA PELIGRAD. On the functional central limit theorem for reversible Markov chains with nonlinear growth of the variance
- 1106 ZHONGQUAN TAN, ENKELEJD HASHORVA AND ZUOXIANG PENG. Asymptotics of maxima of strongly dependent Gaussian processes
- 1119 LIJUN BO AND CHEN HAO. First passage times of constant-elasticity-of-variance processes with two-sided reflecting barriers
- 1134 HAMED AMINI AND MARC LELARGE. Upper deviations for split times of branching processes
- 1144 HENRY W. BLOCK, NAFTALI A. LANGBERG AND THOMAS H. SAVITS. A Glaser twist: focus on the mixture parameters
- 1156 TOM BRITTON AND PIETER TRAPMAN. Maximizing the size of the giant
- 1166 TUĞRUL DAYAR AND M. CAN ORHAN. Kronecker-based infinite level-dependent QBD processes

Short Communications

- 1188 SAMIM GHAMAMI AND SHELDON M. ROSS. Improving the Asmussen–Kroese-type simulation estimators
- 1194 TSUYOSHI KATAYAMA. A note on M/G/1 vacation systems with sojourn time limits
- 1200 Index

Applied Probability journals online at

<http://projecteuclid.org/jap>

<http://projecteuclid.org/aap>

Journal of Applied Probability and *Advances in Applied Probability* are now available online, in partnership with Project Euclid, at no extra cost to subscribers.

The online editions include

- an electronic version of each new issue (in PDF format) some weeks before the printed version becomes available
- an archive of all issues since 1998
- full bibliographic details of each article, along with its abstract and an actively linked list of references
- a search facility, allowing users to search by author name, article title, subject or keyword, or through the full text of the abstract or the article itself

Access

The abstract and reference list of each article are available free to all users; full access to the archive, including the full text of articles, is currently available at no extra charge to subscribers to the print editions.

Individual subscribers should register with Project Euclid by creating a user profile, entering their JAP and/or AAP subscription number where a 'subscriber code' is requested.

Institutional subscribers should complete and return a licence agreement (available at <http://www.appliedprobability.org>) to the Applied Probability office along with the details of their IP range.

Non-subscribers can gain access to individual articles on a pay-per-view basis.

For further information, please contact Sue Boyles: telephone +44 114 222 3922, fax +44 114 222 3926, email s.c.boyles@sheffield.ac.uk, write to

Applied Probability
School of Mathematics and Statistics
University of Sheffield
Sheffield S3 7RH, UK

or visit our website:

www.appliedprobability.org

Subscription rates

Subscription rates for volume 49 (2012) of *Journal of Applied Probability (JAP)* are as follows (post free and including online access at <http://projecteuclid.org/jap/>): US\$321.00; A\$304.00; £200.00 for libraries and institutions; or US\$108.00; A\$102.00; £67.00 for individuals belonging to a recognised scientific society. The subscription rates for volume 44 (2012) of *Advances in Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 222 3926; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

Research papers are published in both *Journal of Applied Probability (JAP)* and *Advances in Applied Probability (AAP)*, with longer papers typically appearing in *AAP*. However, assignment of papers between the two journals is made by the Editor on an issue-by-issue basis. A submission to Applied Probability is considered as a submission to either journal. In addition, *AAP* publishes letters specifically related to papers that have appeared in *AAP* and *JAP* publishes short communications of a few printed pages in the nature of notes and letters specifically related to papers that have appeared in *JAP*. Review papers and papers in *stochastic geometry and statistical applications* are published in *AAP*.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is japaap@sheffield.ac.uk. Authors should also submit one hard copy to the Executive Editor, as above.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/12
