# **Seed Ecology**

## Edited by W. Heydecker, MSc, PhD, NDH

University of Nottingham
Easter Schools in Agricultural Science

This, the proceedings of the Nineteenth Easter School held in 1972, reviews a wide range of environmental factors affecting the germination, growth and viability of seeds, considering both work in the laboratory and the application of these studies to field situations.

The points of view considered are not only those of the plant ecologist, but also those of the geneticist, plant biochemist, plant physiologist, plant pathologist, seed technologist, soil physicist, agronomist and agricultural engineer; this inter-disciplinary approach produces a balanced picture of the complex relationship which exists between seeds and their environment.
