# ÉPILEPSIE

Lorsque l'objectif thérapeutique est la maîtrise complète des crises

Maîtrise complète des crises chez un pourcentage impressionnant de patients<sup>1</sup>

Frisium est « un antiépileptique remarquablement efficace et [généralement] sûr d'emploi lorsqu'il est ajouté au traitement »<sup>1</sup>

Efficace contre tous les types de crises, tant chez les adultes que chez les enfants<sup>2</sup>

Prise uniquotidienne, de préférence au coucher<sup>†</sup>

LARGE SPECTRE D'ACTION

# Frisium®

### Une fois par jourt

† La dose quotidienne peut être fractionnée chez certains patients.

Frisium est indiqué comme traitement d'appoint chez les patients épileptiques dont l'état n'est pas maîtrisé de façon satisfaisante par le traitement antiépileptique utilisé. À l'instar des autres benzodiazépines, le clobazam doit être administré avec prudence aux patients, notamment aux personnes âgées. Les effets indésirables les plus fréquents (>1 %) comprennent la somnolence, les étourdissements, la fatique, l'ataxie, le gain pondéral, la nervosité, les troubles du comportement, l'hostilité et la vision brouillée.

## On peut facilement reconnaître le jeune patient épileptique traité au Tegretol CR.

### Excellent contrôle des crises

☐ Tegretol® CR (carbamazépine à libération contrôlée) maîtrise les crises chez de nombreux patients, causant peu d'impact sur la fonction cognitive<sup>1,2</sup>. Tegretol CR permet à de nombreux patients de penser clairement et de donner le meilleur d'eux-mêmes1.2.

### Taux sanguins uniformes

Tegretol CR cause moins de «hauts et de bas» dans les taux sanguins que le Tegretol conventionnel. Les effets secondaires sont ainsi réduits et le modèle de fonction cognitive est plus stable?

L'effet indésirable le plus communément signalé, lié à la carbamazépine, est la somnolence. Un tel effet ne se manifeste habituellement que durant la phase initiale du traitement' mais on peut réduire son importance en administrant de la carbamazépine à libération contrôlée (TEGRETOL\*CR).

### Posologie b.i.d. commode

Lorsque vous instituez ou remplacez un traitement, pensez au Tegretol CR. Il est présenté en comprimés à 200 mg et 400 mg facilement divisibles pour une plus grande souplesse d'administration et améliorer

l'observance du patient.

## TEGRETOL CR.

Aide les épileptiques à réaliser leur plein potentiel.
