

THE EDINBURGH MATHEMATICAL SOCIETY

The Edinburgh Mathematical Society was instituted in 1883 for ‘the promotion and extension of Mathematical Science, Pure and Applied’.

Members may subscribe to the *Proceedings* at a reduced rate. Further information about membership can be obtained from the Secretary.

The Society’s address is The Secretary, The Edinburgh Mathematical Society, James Clerk Maxwell Building, The King’s Buildings, Edinburgh EH9 3JZ, UK (edmathsoc@ed.ac.uk).

Submission of papers

Papers to be considered for publication should be submitted by email (preferably) to pems@icms.org.uk (in the form of a single pdf, postscript or \TeX / \LaTeX attachment). Alternatively, papers may be submitted by post to PEMS Editorial Office, International Centre for Mathematical Sciences, 15 South College Street, Edinburgh EH8 9AA, UK.

Each manuscript should contain a short abstract of no more than 200 words and also a primary classification number from the American Mathematical Society’s 2010 Mathematics Subject Classification Scheme. The style and arrangement of the paper should conform to current practice in the *Proceedings*.

Authors should include in their covering note a suggestion of an appropriate subject editor from the list of board members on the inside front cover.

Authors are encouraged to use \TeX or \LaTeX to prepare their papers. \LaTeX is especially recommended, and a class file is available from <http://icms.org.uk/activities/pems> although it is not necessary to use this.

Once an article has reached its final form and is accepted for publication, authors will be asked to supply a \TeX file for the paper (if available). This should be a single file, with any relevant macros included in the preamble. Figures in PostScript form are also welcome, and should be submitted at the same time as the \TeX file for the paper (in zipped format if appropriate).

When a paper has been accepted for publication, the corresponding author will be able to choose to publish the paper under a regular publication agreement or under a fully Open Access agreement.

In the case where authors choose to publish a paper as a regular publication, they will need to sign the Journal’s standard transfer of copyright form (http://journals.cambridge.org/images/fileUpload/images/PEMS_ctf.pdf): under the conditions detailed on such form, when an article is accepted, its authors are free to post their version of the accepted manuscript on a website or repository. As such, Proceedings of the Edinburgh Mathematical Society is compliant with the Open Access mandates of the vast majority of academic institutions and funding sources.

In the case where authors choose to publish a paper under a fully Open Access agreement, they will be asked to sign the alternative Open Access form (http://journals.cambridge.org/images/fileUpload/images/PEMS_ctf_oa.pdf) and, upon payment of a one-off Article Processing Charge of UK£1780/US\$2835 (in 2016), the final published Version of Record shall be made freely available to all in perpetuity, and will be published under a creative commons licence, enabling its free re-use and re-distribution.

Please note that publication under a fully Open Access agreement is part of the Cambridge Open option (for more details, please see: <http://journals.cambridge.org/action/displaySpecialPage?pageId=4576>).

One proof is supplied, which should be corrected and returned promptly. Excessive corrections may be charged to authors. Authors will receive an electronic offprint in pdf format.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world’s forests. Please see www.fsc.org for information.

Proceedings of the Edinburgh Mathematical Society

VOLUME 61 (SERIES II) PART 2

MAY 2018

Free and properly discontinuous actions of groups on homotopy $2n$ -spheres <i>M. Golasinski, D. Lima Goncalves and R. Jimenez</i>	305
Finite groups whose common-divisor graph is regular <i>M. Ghaffarzadeh, M. Ghasemi and M. L. Lewis</i>	329
Integrable derivations and stable equivalences of Morita type <i>M. Linckelmann</i>	343
A note on Rényi's 'record' problem and Engel's series <i>L. Fang and M. Wu</i>	363
Note on spectra of non-selfadjoint operators over dynamical systems <i>S. Beckus, D. Lenz, M. Lindner and C. Seifert</i>	371
Recurrence to shrinking targets on typical self-affine fractals <i>H. Koivusalo and F. A. Ramirez</i>	387
Some remarks on the Wiman–Edge pencil <i>A. G. Zamora</i>	401
Weighted vector-valued inequalities for a class of multilinear singular integral operators <i>G. Hu and K. Li</i>	413
Sums of quadratic endomorphisms of an infinite-dimensional vector space <i>C. De Seguins Pazzis</i>	437
Non-negative curvature, elliptic genus and unbounded Pontryagin numbers <i>M. Herrmann and N. Weisskopf</i>	449
Modular interpretation of a non-reductive Chow quotient <i>P. Gallardo and N. Giansiracusa</i>	457
Burau maps and twisted Alexander polynomials <i>A. Conway</i>	479
Algebraic limit cycles on quadratic polynomial differential systems <i>J. Llibre and C. Valls</i>	499
Hardy-type inequalities for fractional powers of the Dunkl–Hermite operator <i>Ó. Ciaurri, L. Roncal and S. Thangavelu</i>	513
Del Pezzo surfaces in weighted projective spaces <i>E. Paemurru</i>	545
An equivariant theory for the bivariant Cuntz semigroup <i>G. N. Tornetta</i>	573
A remark on configuration spaces of two points <i>G. Raptis and P. Salvatore</i>	599
