

VOLUME 32 NUMBER 3 JULY 1996

Experimental Agriculture

Tropical regions, Farming systems
Plantation crops, Sustainability

CAMBRIDGE UNIVERSITY PRESS

Editor

Dr J. G. W. Jones, Department of Agriculture, The University of Reading, Earley Gate,
PO Box 236, Reading RG6 6AT, UK

S. Carr (Managing Editor) The Open University, Milton Keynes

J. M. Hirst (Book Review Editor) Blagdon, Bristol

Editorial Board

M. K. V. Carr, Silsoe College, Cranfield University

R. H. V. Corley, Unilever Plantations and Plant Science Group, Cambridge

D. Gibbon, University of East Anglia, Norwich

P. J. Gregory, Department of Soil Science, The University of Reading

N. L. Innes, Scottish Crop Research Institute, Dundee

R. H. Kemp, Warlingham, Surrey

F. G. H. Lupton, Southwold, Suffolk

W. Reed, Bourton-on-the-Water, Gloucestershire

J. Riley, IACR-Rothamsted, Harpenden

P. R. Scott, CAB International, Wallingford

N. W. Simmonds, Edinburgh

R. W. Smith, Overseas Development Administration, London

G. R. Squire, Scottish Crop Research Institute, Dundee

R. J. Summerfield (Chairman), Department of Agriculture, The University of Reading

International Correspondents

M. P. Collinson, CGIAR, Washington DC, USA

P. J. M. Cooper, ICRAF, Nairobi, Kenya

W. Erskine, ICARDA, Aleppo, Syria

J. Hamblin, CLIMA, University of Western Australia, Perth

T. G. Kelley, ICRISAT, Patancheru, India

G. Kirk, IRRI, Manila, Philippines

M. De Nuce De Lamothe, CIRAD, Paris, France

EDITORIAL POLICY

Experimental Agriculture publishes the results of analytical studies of the agronomy of crops, and particularly of the food, forage and industrial crops of the warmer regions of the earth; papers on agroforestry are also welcomed. It is especially concerned with experimental work conducted in the field and designed to explain agronomic results in biological and environmental terms. Papers on plant breeding may be accepted if their interest is primarily agronomic; submissions from researchers using artificial, more-or-less controlled or protective environments may also be accepted. However, the main emphasis is on measurement and experimentation in the field, associated in appropriate cases with survey methods. The journal also publishes accounts of new experimental techniques, new methods in experimental crop production and critical discussions of specific problems arising in countries where agricultural production is developing rapidly. Reviews of particular fields of agronomy or of agronomic research methods will be commissioned from time to time by the Editors who welcome suggestions of appropriate topics. *Experimental Agriculture* is the successor of the *Empire Journal of Experimental Agriculture*, founded in 1933.

Information on *Experimental Agriculture* and all other Cambridge journals is available on <http://www.cup.cam.ac.uk/> and in North America on <http://www.cup.org/>.
