

Clay Minerals

VOLUME 7 • NUMBER 3 • JULY 1968

CONTENTS

| | |
|---|------------|
| KEVIN G. TILLER. Stability of hectorite in weakly acidic solutions. I. A chemical study of the dissolution of hectorite with special reference to the release of silica | 245 |
| KEVIN G. TILLER. Stability of hectorite in weakly acidic solutions. II. Studies of the chemical equilibrium and the calculation of free energy | 261 |
| B. K. G. THENG, D. J. GREENLAND and J. P. QUIRK. The effect of exchangeable alkylammonium ions in the swelling of montmorillonite in water | 271 |
| H. KODAMA and J. E. BRYDON. A study of clay minerals in Podzol soils in New Brunswick, eastern Canada | 295 |
| C. V. JEANS. The origin of the montmorillonite of the European Chalk with special reference to the Lower Chalk of England | 311 |
| H. GRAF VON REICHENBACH. Cation exchange in the interlayers of expandible layer silicates | 331 |
| M. J. WILSON, D. C. BAIN and W. A. MITCHELL. Saponite from the Dalradian meta-limestones of north-east Scotland | 343 |
| R. J. GILKES. Clay mineral provinces in the tertiary sediments of the Hampshire Basin | 351 |
| Notes | |
| D. F. BALL. Interstratified illitic clay in Ordovician ash from Conway, North Wales | 363 |
| J. A. GARD and E. A. C. FOLLETT. A structural scheme for palygorskite A Standard Specimen Bank | 367 370 |
| Book Review | 371 |
