The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

7. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

8. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

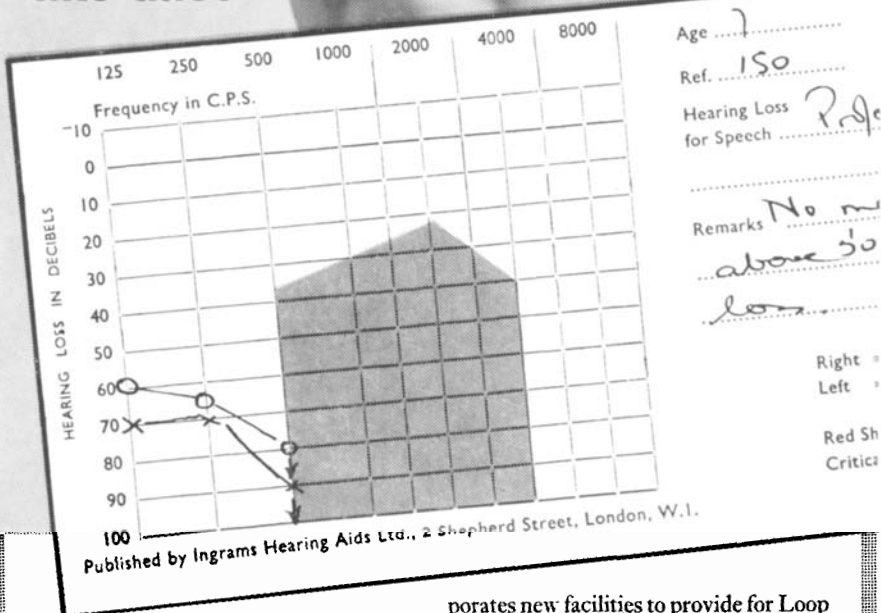

9. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

What do you do about a case like this?

Now, for the profoundly deaf child and the adult with a severe fragmentary loss—a completely new hearing aid. The Zenith 'Vocalizer' enables hearing correction to be maintained down to frequencies previously beyond the scope of all but desk appliances. The 'Vocalizer' actually amplifies down to one hundred cycles. It can prove helpful for children and adults with some residual hearing for low frequencies but a total loss for the medium and high frequencies. It incor-

porates new facilities to provide for Loop Listening simultaneously with the child hearing his own voice for speech training. Because the 'Vocalizer' is light yet robust, he can continue to use the same aid at home as he uses at school.

REFER YOUR PATIENTS TO INGRAMS who will gladly provide this unique hearing aid on trial—or any other aid from their comprehensive range of *twenty-six different makes*. Patients have the widest choice with Ingrams. If you would like details, please write.

Just one of the reasons why Ceporin has an important place in the ENT unit

Please mention *The Journal of Laryngology and Otology* when replying to advertisements

Ceporin[®] (cephaloridine)

Broad spectrum

Ceporin is highly active against most gram-positive organisms—including penicillin-resistant staphylococci—and many gram-negative organisms.

Bactericidal

Ceporin rapidly kills susceptible organisms at or near the minimum inhibitory concentration, leaving little opportunity for resistance to develop.

Safe

Ceporin has very low toxicity and can usually be given safely to penicillin-hypersensitive patients. The injection is remarkably

Please mention *The Journal of Laryngology and Otology* when replying to advertisements

Clinical success

In the ENT unit, Ceporin has proved valuable for use in place of more toxic drugs or combinations of antibiotics. In particular, it is an excellent alternative where penicillin might prove ineffective or dangerous. Ceporin's broad-spectrum activity is also very useful in the mixed infections often encountered in the ear, nose and throat.

Please mention *The Journal of Laryngology and Otology* when replying to advertisements

Ceporin[®] (cephaloridine)

Presentation

Ceporin is issued in vials containing 250 mg, 500 mg and 1 gram of cephaloridine, packed singly and in boxes of five.

...and with A.V.C. where required

—that is the triumph of the
MACKIE
hearing aid

The new Mackie post-aural hearing aid is made in several different circuit versions so that the gain and frequency response can be selected to match the patient's needs; and it is available where required with a unique form of automatic volume control which has proved highly successful in cases of recruitment. The forward pick-up microphone gives maximum

intelligibility of speech without background interference.

It is exported to many countries including the United States of America—a tribute to its high quality and advanced design.

In Great Britain it is available for trial by your patients from *independent* hearing aid dealers in all parts of the country.

Why is Penbritin the safer antibiotic in Paediatrics? Upper Respiratory Tract Infections

As you may recall doctor, last time we discussed Penbritin in Skin and Soft Tissue Infections and Otitis Media.

Yes, I remember that. Could we talk today about Penbritin in, say, throat infections?

Certainly doctor. Most doctors I visit, consider that these conditions are usually streptococcal. However, many of them find that mixed infections, involving coliforms or *Haemophilus* as well, do occur—and of course it's not easy to be sure of the cause without the help of a bacteriologist. This is where broad-spectrum antibiotics come into their own. I realise this, but just how effective is Penbritin in simple streptococcal infections?

Exceedingly effective.

More effective clinically than other broad-spectrum antibiotics?

Well, a recent comparative trial of Penbritin and tetracycline syrups in children's infections, concluded that "The results in the ampicillin treated cases were generally more satisfactory than in the tetracycline treated group . . ."¹

What is meant by 'more satisfactory'?

86% of the Penbritin patients responded within 7 days, whereas only 61% of the tetracycline patients responded in that time.

Were any reasons given for this?

It was thought that the results probably reflected the greater activity of Penbritin against the organisms associated with respiratory infections.

Well, Penbritin certainly seems to have had the edge in that trial.

And, of course, Penbritin is the safer broad-spectrum antibiotic for children, particularly if high or prolonged dosage is necessary.

Yes, I remember you mentioning that during one of our earlier discussions. And by the way, children do seem to like the syrups.

Perhaps next time I call we could talk about Penbritin in the treatment of lower respiratory tract infections such as bronchitis and pneumonia.

Yes. That should be an interesting discussion.

Published trials[†] in this country and throughout the world endorse the effectiveness of Penbritin in a wide range of indications, including:

Acute Tonsillitis · Laryngitis · Bronchitis
Otitis Media · Wound Infections · Impetigo
Pneumonia · Carbuncles
Cellulitis · Furunculosis · Erysipelas
Recurrent Cystitis · Pyelonephritis

Children's Dosage:

Under 2 years: 62.5-125 mg. four times daily, before meals. 2-10 years: 125-250 mg. four times daily, before meals.

Availability:

Penbritin (ampicillin B.P.)
Paediatric Tablets containing 125 mg.
Capsules 250 mg. and 500 mg.
Syrup 125 mg./5 ml. teaspoonful
Syrup Forte 250 mg./5 ml. teaspoonful
I.M. injections 100 mg., 250 mg. and 500 mg.

Contra-Indication:

Penicillin allergy.

WHEN RECOMMENDING A HEARING AID WHY MULTITONE?

Because as well as a complete range of hearing aids, to suit all types of deafness, Multitone cater for the specialised needs of those patients who suffer from physical handicaps which preclude them from using normal hearing aids.

For spastic and thalidomide children, special fitting devices have been developed in conjunction with ENT Specialists.

For the very elderly, Electronic Ear Trumpets and Communicators considerably ease the problem of communication.

If you would like to know more about these devices or if you have any fitting problems — please write or telephone us.

ORBENIN (cloxacillin sodium B.P.) is a penicillin active against virtually all Gram-positive organisms, including staphylococci, β -haemolytic streptococci and pneumococci, irrespective of their resistance to other antibiotics.

It is encouraging that the widespread use of Orbenin in hospitals has not resulted in the emergence of resistant strains.

More than 300 references in the World Literature testify to the excellent clinical results obtained with Orbenin in a wide variety of Gram-positive infections.
