## Contents

### PART 1 FEBRUARY 1995

Rotation numbers, twists and a Sharkovskii–Misiurewicz-type ordering for patterns on the interval	<i>A. M. Blokh</i>	1
Group-theoretic obstructions to integrability	<i>R. C. Churchill, D. L. Dod and M. F. Singer</i>	15
On normal forms in Hamiltonian dynamics, a new approach to some convergence questions	<i>D. DeLatté</i>	49
Nonexistence of SBR measures for some diffeomorphisms that are ‘Almost Anosov’	<i>H. Hu and L.-S. Young</i>	67
Falconer’s formula for the Hausdorff dimension of a self-affine set in $\mathbf{R}^2$	<i>I. Hueter and S. P. Lalley</i>	77
Fibonacci maps revisited	<i>G. Keller and T. Nowicki</i>	99
Asymptotic stability of heteroclinic cycles in systems with symmetry	<i>M. Krupa and I. Melbourne</i>	121
On the space of ergodic invariant measures of unipotent flows	<i>S. Mozes and N. Shah</i>	149
Ergodic theory for axiom A endomorphisms	<i>M. Qian and Z. Zhang</i>	161
Sur une notion d’autonomie de systèmes dynamiques, appliquée aux ensembles invariants des flots d’Anosov algébriques	<i>A. Zeghib</i>	175

### PART 2 APRIL 1995

Some new rigidity results for stable orbit equivalence	<i>S. Adams</i>	209
No division and the set of periods for tree maps	<i>Ll. Alsedà and W. Ye</i>	221
Periods of maps on trees with all branching points fixed	<i>S. Baldwin and L. Llibre</i>	239
Caractérisation des flots d’Anosov en dimension 3 par leurs feuilletages faibles	<i>T. Barbot</i>	247
Liapunov stability and adding machines	<i>J. Buescu and I. Stewart</i>	271
Robust nonhyperbolic dynamics and heterodimensional cycles	<i>L. J. Díaz</i>	291
On the integrability of intermediate distributions for Anosov diffeomorphisms	<i>M. Jiang, Ya B. Pesin and R. de la Llave</i>	317
A note on transitive flows	<i>D. A. Lawrence and E. S. Thomas</i>	333
Anosov automorphisms for nilmanifolds and rigidity of group actions	<i>N. Qian</i>	341

Minimal sets of homogeneous flows	<i>A. N. Starkov</i>	361
Ensembles invariants des flots géodésiques des variétés localement symétriques	<i>A. Zeghib</i>	379

## PART 3 JUNE 1995

Ruelle's transfer operator for random subshifts of finite type	<i>T. Bogenschütz and V. M Gundlach</i>	413
The Hausdorff dimension of certain solenoids	<i>H. G. Bothe</i>	449
Rigidity for non-compact surfaces of finite area and certain Kähler manifolds	<i>J. Cao</i>	475
Common extensions and hyperbolic factor maps for coded systems	<i>D. Fiebig</i>	517
A topological invariant for volume preserving diffeomorphisms	<i>J.-M. Gambaudo and E. Pécou</i>	535
A subshift of finite type that is equivalent to the Ising model	<i>O. Häggström</i>	543
On topological entropy of maps	<i>M. Hurley</i>	557
Higher cohomology for Abelian groups of toral automorphisms	<i>A. Katok and S. Katok</i>	569
Ergodic theory on Galton–Watson trees: speed of random walk and dimension of harmonic measure	<i>R. Lyons, R. Pemantle and Y. Peres</i>	593

## PART 4 AUGUST 1995

Entropy pairs for a measure	<i>F. Blanchard et al</i>	621
Pseudogroups of isometries of $R$ : reconstruction of free actions on $R$ -trees	<i>D. Gaboriau, G. Levitt and F. Paulin</i>	633
Ergodic properties of a dynamical system arising from percolation theory	<i>C. Kraaikamp and R. Meester</i>	653
On the sofic limit sets of cellular automata	<i>A. Maass</i>	663
Instances of cohomological triviality and rigidity	<i>W. Parry</i>	685
Classifying $C^{1+}$ structures on dynamical fractals: 1. The moduli space of solenoid functions for Markov maps on train tracks	<i>A. A. Pinto and D. A. Rand</i>	697
Persistence of homoclinic tangencies in higher dimensions	<i>N. Romero</i>	735
Cohomological rigidity of algebraic $Z^d$ -actions	<i>K. Schmidt</i>	759
Conditional measure and flip invariance of Bowen–Margulis and harmonic measures on manifolds of negative curvature	<i>C. Yue</i>	807

## PART 5 OCTOBER 1995

Bounded geodesics in rank-1 locally symmetric spaces	<i>C. S. Aravinda</i>	
--	-----------------------	--

	1245
<i>Contents</i>	
<i>and E. Leuzinger</i>	813
Interval translation mappings <i>M. Boshernitzan and I. Kornfeld</i>	821
A degenerate singularity generating geometric Lorenz attractors <i>F. Dumortier, H. Kokubu and H. Oka</i>	833
Majorant series convergence for twistless KAM tori <i>G. Gallavotti and G. Gentile</i>	857
Metric properties of non-renormalizable S-unimodal maps: II. Quasisymmetric conjugacy classes <i>M. Jakobson and G. Świątek</i>	871
Zero-dimensional covers of finite dimensional dynamical systems <i>J. Kulesza</i>	939
Almost-sure waiting time results for weak and very weak Bernoulli processes <i>K. Marton and P. C. Shields</i>	951
$C^*$ -dynamical systems for which the tensor product formula for entropy fails <i>H. Narnhofer, W. Thirring and E. Størmer</i>	961
Classifying $C^{1+}$ structures on dynamical fractals: 2. Embedded trees <i>A. A. Pinto and D. A. Rand</i>	969
Some ergodic properties for infinite graphs associated with subfactors <i>S. Popa</i>	993

#### PART 6 DECEMBER 1995

Dynamics of Morse–Smale urn processes <i>M. Benaïm and M. W. Hirsch</i>	1005
Extending flows from isolated invariant sets <i>W. L. Bloch</i>	1031
Horseshoes in the measure-preserving Hénon map <i>R. Brown</i>	1045
The flat-trace asymptotics of a uniform system of contractions <i>D. Fried</i>	1061
Invariant measures of groups of homeomorphisms and Auslander’s conjecture <i>S. Friedland</i>	1075
The projective fundamental group of a $Z^2$ -shift <i>W. Geller and J. Propp</i>	1091
Local dimension for piecewise monotonic maps on the interval <i>F. Hofbauer</i>	1119
Limit theorems in averaging for dynamical systems <i>Y. Kifer</i>	1143
On the cost of generating an equivalence relation <i>G. Levitt</i>	1173
The ambient structure of basic sets <i>A. Löffler</i>	1183
Diffeomorphisms of the $k$ -torus with wandering domains <i>P. D. McSwiggen</i>	1189
Epimorphic subgroups and invariant measures <i>S. Mozes</i>	1207
Bifurcations of meromorphic vector fields on the Riemann sphere <i>J. Muciño-Raymundo and C. Valero-Valdés</i>	1211
On the approximation of Hénon-like attractors by homoclinic tangencies <i>R. Ures</i>	1223
Meromorphic multifunctions and stability of Julia sets <i>Shengjian Wu</i>	1231

**CAMBRIDGE**

## **Introduction to the Modern Theory of Dynamical Systems**

ANATOLE KATOK and BORIS HASSELBLATT

This book provides the first self-contained comprehensive exposition of the theory of dynamical systems as a core mathematical discipline closely intertwined with all main areas of mathematics. The authors introduce and rigorously develop the theory while providing researchers interested in applications with fundamental tools and paradigms.

£60.00 net HB 0 521 34187 6 822 pp. 1995  
Encyclopedia of Mathematics and its Applications 54

## **Ergodic Theory and Harmonic Analysis**

Proceedings of the 1993 Alexandria Conference

Edited by KARL E. PETERSEN and IBRAHIM SALAMA

The papers printed here explore many of the rapidly developing connections between ergodic theory and other branches of mathematics, giving the background of each area, the most outstanding recent results and the most current promising lines of research. They should form perfect starting points for beginning researchers.

## **Lectures on Ergodic Theory and Pesin Theory on Compact Manifolds**

MARK POLLICOTT

Pesin theory consists of the study of the theory of non-uniformly hyperbolic diffeomorphisms. The aim of this book is to provide the reader with a straightforward account of this theory, following the approaches of Katok and Newhouse. The notes are divided into two parts. The first develops the basic theory, starting with general ergodic theory and introducing Liapunov exponents. Part Two deals with the applications of Pesin theory and contains an account of the existence (and distribution) of periodic points. It closes with a look at stable manifolds, and gives some results on absolute continuity.

## INSTRUCTIONS TO AUTHORS

### 1 *Submission of typescripts*

Two copies of the manuscript should be submitted to one of the four Executive Editors (addresses on outside front cover). Papers may also be submitted electronically to those Executive Editors with electronic mail addresses. The editor will acknowledge receipt of the manuscripts. **It is important that authors inform the editor of any changes of address** whilst their paper is under consideration.

### 2 *Typescript*

Papers should be typed, double-spaced, on one side only and with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. *A new proof of the ergodic theorem*, whereas *Some applications of a theorem of Birkhoff* would be useless).

### 3 *Notation*

It is important that mathematicians expressions are clear to a printer (who is not a mathematician). For instance,  $n_k$  ( $n$  sub  $k$ ) is common usage, but avoid if possible using  $c_n k$ . Fractions are generally best expressed by a solidus. Complicated exponents like

$$\exp \{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

In the typescript, italics, small capitals and capitals are specified by single, double and triple underlining. Bold-faced types is shown by wavy underlining.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.  
**It is important that authors inform the editor of any changes of address** whilst their paper is under consideration.

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as  $o$ ,  $O$ ,  $o$ ,  $O$ ,  $0$ ;  $x$ ,  $X$ ,  $\times$ ;  $\phi$ ,  $\Phi$ ,  $\emptyset$ ;  $l$ ,  $1$ ;  $\varepsilon$ ,  $\in$ ;  $\kappa$ ,  $k$ .

There is no need to underline Greek or script letters provided these are clearly typed. Any special symbols should be explained on a separate sheet of directions for the printer.

If an author wishes to mark the end of the proof of a theorem, the sign  $\square$  may be used.

Footnotes should be avoided.

### 4 *Diagrams*

Figures and drawings should be on separate sheets in

black ink. Photocopies are acceptable only if they are as clear as the originals. *Symbols, legends and captions should be given on a transparent overlay*. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the typescript. The author's name in pencil must be on all separate sheets of diagrams.

A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition.

The publisher recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and is therefore willing to have such diagrams re-drawn, provided that they are clear.

### 5 *Tables*

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures.

### 6 *References*

References should be collected at the end of the paper numbered in alphabetical order of the author's names. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication;

[4] N. Dunford & J. T. Schwartz *Linear Operators* Part I. Wiley: New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

### 7 *Proofs*

Authors receive one set of proofs for correction. If excessive alterations to the original manuscript are requested after the paper has been typeset, the author will be charged the cost of resetting. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. **It is important that proofs are corrected and returned promptly.**

### 8 *Reprints*

There are 100 reprints, free of charge, for each paper. For papers with several authors these reprints are divided between the authors. There are no page charges.

# *Ergodic theory and dynamical systems*
