

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Bounds for the distance to finite-dimensional subspaces	
S.S. Dragomir	337
Bifurcation of positive entire solutions for a semilinear elliptic equation	
Tsing-San Hsu and Huei-Li Lin	349
A strong convergence theorem for contraction semigroups in Banach spaces	
Hong-Kun Xu	371
A characteristic subgroup and kernels of Brauer characters	
I.M. Isaacs and Gabriel Navarro	381
Note on the Schwarz triangle functions	
Mark Harmer	385
Examples and classification of Riemannian submersions satisfying a basic equality	
Bang-Yen Chen	391
On coatoms of the lattice of matrix-extensible radicals	
Halina France-Jackson	403
Similarity invariant semigroups generated by non-Fredholm operators	
Iztok Kavkler	407
Rendezvous numbers in normed spaces	
Bálint Farkas and Szilárd György Révész	423
The Hutchinson-Barnsley theory for infinite iterated function systems	
Gertruda Gwóźdź-Lukawska and Jacek Jachymski	441
A functional inequality for the polygamma functions	
Horst Alzer	455
Approximate solutions for the Couette viscometry equations	
F.R. de Hoog and R.S. Anderssen	461
On 3-class groups of certain pure cubic fields	
Frank Gerth III	471
There are no n-point F_σ sets in R^m	
David L. Fearnley, L. Fearnley and J.W. Lamoreaux	477
Rings having zero-divisor graphs of small diameter or large girth	
S.B. Mulay	481
Lipschitz functions with maximal Clarke subdifferentials are staunch	
Jonathan M. Borwein and Xianfu Wang	491
