

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\text{T}\mathcal{E}\mathcal{X}$. (We accept Plain $\text{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}\text{-T}\mathcal{E}\mathcal{X}$ or $\text{L}\mathcal{A}\text{T}\mathcal{E}\mathcal{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Equality algebras

Desmond Fearnley-Sander and Tim Stokes	177
On a Banach space without a weak mid-point locally uniformly rotund norm	
Zhibao Hu, Warren B. Moors and Mark A. Smith	193
Systems of differential equations with fully nonlinear boundary conditions	
H.B. Thompson	197
On continuity of derivations and epimorphisms on some vector-valued group algebras	
Ramesh V. Garimella	209
Finite element methods for compressible Stokes equations with inflow boundary condition	
Jae Ryoung Kweon	217
Hypersurfaces with special quadric representations	
Jitan Lu	227
On conjecture of Resnikoff and Saldaña	
Winfried Kohlen	235
Canonical point mappings in $H\bar{H}$	
Zayid Abdulhadi and Walter Hengartner	239
A characterisation of cyclic subnormal separated A-groups of nilpotent length three	
Muhammad Umar Makarfi	243
On finite groups with the Cayley invariant property	
Cai Heng Li	253
Comparable differentiability characterisations of two classes of Banach spaces	
J.R. Giles	263
The computational complexity of torsion-freeness of finitely presented groups	
Steffen Lemp	273
Uniformities and uniformly continuous functions on locally connected groups	
Michael Megrelishvili (Levy), Peter Nickolas and Vladimir Pestov	279
Convexité holomorphe intermédiaire des revêtements d'un domaine pseudoconvexe	
S. Asserda	285
Quotient de Hadamard en plusieurs variables	
Abdelkader Necer	291
Expansion of analytic functions of an operator in series of Faber polynomials	
Maurice Hasson	303
Subdifferential Rolle's and mean value inequality theorems	
D. Azagra and R. Deville	319
Fundamental theorems of prehomogeneous vector spaces of characteristic p	
Tatsuo Kimura, Takeyoshi Kogiso and Makiko Fujinaga	331

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Partitions into large unequal parts	
Kevin Fergusson	343
Computational studies of optimal controls	
Heung Wing Joseph Lee	345
Membrane transport and flux response	
Masahisa 'Mabo' Suzuki	349
