To the Medical Profession

Safeguarding the Deaf

FORTIPHONE LIMITED have pleasure in submitting to the medical profession an outline of the Plan which they have arranged to protect the deaf from the serious financial loss and disappointment entailed by the purchase of an unsuitable hearing aid. It is known as the

FORTIPHONE Home Trial Plan

1. We advise that, before purchasing, a Fortiphone be taken on Home Trial for 15 or 30 days on payment of One Guinea or Two Guineas respectively. This enables a thorough test to be made at home under everyday conditions, and un-influenced by any interested person. The Fee covers cost of batteries, insurance, packing, carriage, wear and tear, etc. It also has a psychological value.

2. If the deaf person decides to purchase the Fortiphone, the full Trial fee is deducted from the purchase price. In the alternative, no serious financial loss is sustained, and the deaf person does not feel that there is any "moral obligation" to complete the purchase.

3. We supply full directions and, during the Trial, advise the customer how to use the Fortiphone in order to obtain the best results.

4. We send if required, without additional charge, different models in order that the deaf person may finally select the Fortiphone which is most suitable.

5. Convenient terms of divided payments are arranged, if desired.

An Invitation

Fortiphone Limited extend a cordial invitation to any member of the medical profession to send for full particulars of the latest models of the Fortiphone. Fortiphone Limited will also gladly arrange special demonstrations for doctors or their patients. Full details of arrangements will be furnished on request.

The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

A. LOGAN TURNER AND J. S. FRASER

ASSISTED BY

DOUGLAS GUTHRIE AND WALTER HOWARTH

1. Original Articles are accepted on the condition that they have not been published elsewhere.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked and no additional matter should be added.

4. The order for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied, on which the price of the reprints is stated.

5. Authors of Original Communications on Oto-Laryngology in other Journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

6. Editorial Communications should be addressed to "EDITORS, *Journal of Laryngology*, c/o Messrs OLIVER AND BOYD, Tweeddale Court, Edinburgh."

7. The Annual Subscription is Forty Shillings, post free, and is payable in advance.

8. Single copies of back numbers, both of the present and the previous series, are on sale at Four Shillings each.

9. An Annual Subscription can be commenced with any number of the Journal, and the preceding numbers of the current year can be purchased at Four Shillings each.

UNITED STATES OF AMERICA

Orders for this Journal, for single parts or yearly subscriptions, can be sent either through a local bookseller, or to Messrs G. E. STECHERT & Co., 31-33 East 10th Street, New York.

PURPOSES

For Spraying the Nose and Throat with Oils and Aqueous Solutions

Important

The adjustable tip permits spraying in any direction, and is especially important when the bronchial tubes or the post-nasal cavities are to be treated.

When prescribing, please specify

“DeVilbiss Spray No. 15”
(of all Chemists and Surgical Instrument makers)

Complete illustrated Catalogue from
DeVILBISS, CO., LTD., WEST DRAYTON, MIDDLESEX

CHEVALIER JACKSON'S INSTRUMENTS FOR ŒSOPHAGOSCOPY, LARYNGOSCOPY, AND BRONCHOSCOPY

New Models as made for Walter G. Howarth, F.R.C.S.

Each Instrument is made in accordance with the details of Chevalier Jackson's most recent models, and each is supplied with a *spare light carrier*, i.e., 2 light carriers and 2 lamps. All the models have been redesigned with a view to rendering them more easily cleansed; all the crevices and corners for the dirt have been taken away.

To ensure better visibility the tips of the forceps are *black*.

The Howarth-Jackson's Instruments are **less expensive than other American or English models**, and a further economy has been effected by rendering the instrument tips interchangeable, thus reducing the number of forceps handles and tips required.

The lamps are 2.5 volt and more durable than the usual models.

Manufactured only by

DOWN BROS., L^{TD}.

ELECTRIC PHARYNGOSCOPE

With new optical system giving a greatly improved view

The optical system as indicated above the lamp can be rotated as in a cystoscope so as to bring into view the **pharyngeal nares**, the **larynx**, **epiglottis**, the **vocal chords** and the **Eustachian tubes**. A suitable catheter in position is easily observed.

TO INTRODUCE THE INSTRUMENT

Use it as you would a tongue depressor, the patient all the time breathing naturally. Insert the pharyngoscope almost as far as the Pharyngeal Wall. Do not let the pharyngoscope touch it. Depress the tongue and tell the patient to close his mouth and breathe through the nose. Keep the instrument firmly in position and the examination of the various parts may be proceeded with as indicated above.

"I have found your pharyngoscope invaluable. I am always able to see every detail of the larynx. It has enabled me to see the Eustachian Tubes for the first time in my life."—*M.D.*

The Treatment of Catarrh by Nebulisation

ADRENALIN INHALANT, P., D. & Co., affords a means of obtaining the astringent effect of Adrenalin on the mucous membrane of the nose and throat, and being an oily solution gives a more prolonged effect than can be obtained by the use of aqueous solutions. Its application is beneficial when the nasal membranes and accessory sinuses are congested and inflamed. It is indicated in rhinitis, pharyngitis, tonsillitis, laryngitis, and in some forms of bronchial irritation attended with coughing.

Supplied in bottles of 1 fluid ounce.

CHLORETONE INHALANT, P., D. & Co., has long been used with excellent results in the treatment of nasal catarrh, etc. Nebulisation of the nasal passages with this preparation in the early stages of a "cold" will often abort an attack. It should not be mixed with Adrenalin Inhalant, but may be used subsequent to that preparation if desired.

Supplied in bottles of 1, 4 and 16 fluid ounces.
