

ANIMAL PRODUCTION

JOURNAL OF THE BRITISH SOCIETY OF ANIMAL PRODUCTION

FEBRUARY 1979

VOL. 28 PART 1

LONGMAN

INFORMATION FOR CONTRIBUTORS TO
ANIMAL PRODUCTION

Detailed notes for guidance in the preparation of manuscripts are printed in Volume 25: pages ix to xxii. A few general points are given below.

Animal Production publishes reports in English of *original* work in the field of animal production or in any related scientific field. The Editors will consider articles on any aspect of research or development, providing the work described has been carried out in a systematic way, and articles critically re-examining published information. Reviews of literature are not accepted. Papers presenting a detailed description of a technique or of equipment will be considered only if the technique or equipment has been used in experiments, the results of which are included in the same paper or a subsequent paper within a series. Results of research work which do not warrant presentation as a full paper may be submitted for consideration as *Notes*. Notes are not intended for the publication of interim results. They must not exceed 2000 words or the equivalent inclusive of tables and illustrations. Proprietary preparations used as a source of material in experimental comparisons may be referred to by their trade names, in the Material and Methods section only, if this is seen as helpful to readers. Papers describing work designed merely to evaluate proprietary preparations will not be accepted.

Papers are published on the understanding that they have not been and, with the exception of authors' abstracts, will not be published elsewhere without the Editors' written permission. Authors' abstracts can be reproduced if full acknowledgement of the source is made.

Manuscripts should be typewritten on one side of the paper in double-line spacing with wide margins. Each page and the lines on each page should be numbered. Three, or exceptionally two, copies, one of which must be the original, of the typescript and illustrations should be sent to

Professor J. A. F. Rook,
Animal Production,
The Hannah Research Institute,
Ayr KA6 5HL, Scotland

Manuscripts are not returned with proofs; authors should therefore retain copies.

Units of measurement. The International System of Units (SI) should be used, with the recommendations and modifications in *Quantities, Units and Symbols*, The Royal Society, London, 1975, and *Metric Units, Conversion Factors and Nomenclature in Nutritional and Food Sciences*, The Royal Society, London, 1972—reproduced in *Proc. Nutr. Soc.* 31: 239–247, 1972.

Symbols and abbreviations. Authors should consult the notes prepared for guidance. Levels of statistical significance must be clearly indicated.

Illustrations. The same material should not normally be presented in tables and figures. Legends should be typed on a separate sheet.

- (a) Diagrams should be drawn in Indian ink, about twice the size of the finished block, on Bristol board, stout tracing paper or plastic film.

Front cover centrepiece; by Dr. Anne Hurst: Figures of cow and calf on bronze bowl from the Halstatt prehistoric cemetery. Cast in solid bronze in the Salz Kammergut, Upper Austria.

TROPICAL ANIMAL HEALTH AND PRODUCTION

This Journal publishes the results of original research, investigation and technology in the fields of animal disease and animal production which may lead to a fuller utilization of animal resources in developing countries, particularly in tropical and sub-tropical zones.

Published quarterly in February, May, August and November
Volume 11, 1979

Annual subscription	£15.00	USA \$36.00
Single numbers	£4.00	USA \$10.00

Subscription orders to:

**Rapid publication of papers
combined with high standards
of presentation—TAG**

The publication program of **Theoretical and Applied Genetics** re-
flects the continuing progress of breeding genetics, including the
fundamental and applied aspects. TAG will publish original articles
in the following areas:

- Genetic fundamentals of plant and animal breeding
- Physiological fundamentals of plant and animal breeding
- Application of cell genetics to breeding

**Springer-Verlag
Berlin
Heidelberg
New York**

In placing the general breeding problems in the broader context of
general genetical theories and in adjusting to recent advances in the
application of cell manipulation in breeding techniques TAG will
help to meet a real need of publication with a minimum of delay,
and serve as a vehicle for international communication on theoretic-
al and practical breeding problems.

This new enlarged program adapts to the changing world of breed-
ing research and covers: genetics on the cellular level, somatic
hybridization, genetics of the group, including the evolution and
the origin of cultivated plant and animal species.

Besides original papers TAG will publish reviews or articles on hot
topics of applied genetics as well as critical book reviews covering
applied genetics in a wide sense.

The editorial policy is aimed at quick publication by a referee sys-
tem which enables the authors to send their manuscripts directly to
the most competent member of the editorial board. In this manner
the manuscripts are guaranteed the best possible editorial handling.
