FACULTY POSITION IN APPLIED MECHANICS Stanford University

The Applied Mechanics Division of the Mechanical Engineering Department of Stanford University invites applications for a tenure track faculty position at the Assistant Professor level in the general area of Mechanics and Materials. An earned doctorate in Applied Mechanics, or in a closely related field of engineering or applied mathematics or solid state physics, is required, together with a proven interest and ability in the teaching of mechanics. The candidate's area of research interests should complement and enhance current research activities in the Division on the mechanics of micro- and nano-structures as well as related research activities in the Mechanical Engineering and Materials Science Departments. Applicants must have a strong foundation in solid mechanics together with interests in the applications of mechanics to engineering systems and materials. Preference will be given to candidates capable of establishing a strong theoretical research program complemented either by experimental investigations or by computational studies focused on the size scale at which lattice and continuum models overlap. The successful candidate must possess the ability to conduct creative independent research and must show strong promise for developing as an outstanding teacher.

Applicants should send a curriculum vitae, a 1-2 page statement of research and teaching interests and plans, and the names, addresses (postal and e-mail) and telephone numbers of at least three referees to:
