

'Amytal' acts

where tranquillisers fail

'AMYTAL' brand Amylobarbitone was significantly superior to three tranquillisers and one compound preparation in relieving tension, when used in a recent clinical trial* conducted on 51 hospital out-patients suffering from psychoneurosis. 'AMYTAL' was also the most economical drug used not excluding the placebo.

**B.M.J. p. 63, July 13, 1957.*

'AMYTAL' in correct dosage gives prompt sedation without affecting mental alertness, and is agreeably free from hangover. The average sedative dose is $\frac{1}{2}$ - $\frac{3}{4}$ gr. (32-50 mg.) three or four times daily.
