## **Early psychosis: a bridge to the future**

EDITED BY P. MCGORRY, M. NORDENTOFT and E. SIMONSEN

## DEDICATION

We would like to pay a resounding tribute to the late Richard Wyatt on behalf of his colleagues at the International Early Psychosis Association for his major contribution to the field of early psychosis. He was not only a modest and understated giant of the whole schizophrenia field, but over the past decade was incredibly supportive and

progressive in the scientific development of early intervention. His role as North American Vice President of the IEPA from its inception was extremely valuable and has contributed immeasurably to the growth and success of early psychosis research and reform. It was an absolute pleasure and privilege to work with him, particularly because of his wonderfully dry

sense of humour, courtesy and integrity. He was one of the great role models and mentors in schizophrenia research. The 2002 meeting and this supplement of the *British Journal of Psychiatry* have been formally dedicated to his memory. The IEPA has also taken steps to continue to recognise his contribution and keep his memory alive.
