Introduction to Biometrical Genetics

By **KENNETH MATHER** and **JOHN L. JINKS**. In this new volume, the authors have supplemented the more advanced treatment they gave in their *Biometrical Genetics* (Cornell University Press, \$23.50) by providing a shorter, up-to-date account that will be welcomed by those meeting this increasingly important aspect of genetics for the first time. \$14.50

Evolution Today

By **COLIN PATTERSON**. Summarizing the latest ideas on how life originated and diversified on earth, this book provides an authoritative introduction to modern evolutionary theory. 58 black-and-white illustrations. (Coming in January.)

In addition to the full title reference, the abstract published in *Animal Breeding Abstracts* is reproduced. Supplementary bibliographies (marked A, B etc.) are prepared from time to time to bring some of the earlier ones up to date. The bibliographies can be obtained on application to the Director. Some of the most recent bibliographies are listed below, but a full list is obtainable from the Bureau.
