
The Quarterly Journal of Medicine

Official Organ of the
Association for Physicians
of Great Britain and Ireland

One of the leading medical journals published in the U.K. (Established 1907, New Series 1932). It covers the whole field of medicine but gives some emphasis to internal medicine. Its aim is to report advances in both diagnosis and treatment, and many of its papers are concerned with the development of growing points of current interest. The basic orientation is clinical, but the journal welcomes contributions with a patho-physiological approach. In the face of the present tendency to fragment the subject, *The Quarterly Journal of Medicine* attempts to provide general physicians with a synoptic view. Many of the contributions provide a desirable link between clinical and basic science. In addition to original papers, the journal also publishes occasional requested review articles on subjects of special interest.

Quarterly, 1980 prices: £25.00 (UK £19.50, US \$49.00) p.a.
Single issues, £6.75 (\$15.00)
