

ANIMAL PRODUCTION

JOURNAL OF THE BRITISH SOCIETY OF ANIMAL PRODUCTION

OLIVER & BOYD LTD.
EDINBURGH AND LONDON

JUNE 1965

VOL. 7 PART 2

INFORMATION FOR CONTRIBUTORS TO *ANIMAL PRODUCTION*

Animal Production publishes papers on original research provided that they have not been and, with the exception of authors' summaries, will not be published elsewhere without the Editors' written permission. Authors' summaries can be reproduced if full acknowledgement of the source is made. *Contributions* may be in the field of animal production, or in any related scientific field. Reports on techniques will be published only as appendices to scientific papers. Results of research which do not warrant a comprehensive presentation may be submitted for consideration as *Notes*. *Notes* are not intended for the publication of interim results. They should not exceed 2000 words or the equivalent inclusive of tables and illustrations.

Manuscripts should be typewritten in double spacing with wide margins. Each page and the lines on each page should be numbered. *Two* copies of the typescript (one of illustrations) should be sent to

Dr. Gerald Wiener,
A.R.C. Animal Breeding Research Organisation,
West Mains Road, Edinburgh 9.

Manuscripts are not returned with proofs; authors should therefore retain copies.

Illustrations (figures and plates) should be simple and few, otherwise a charge may have to be made to authors. Legends should be typed on a separate sheet.

- (a) Diagrams should be drawn in Indian ink, about twice the size of the finished block, on Bristol board or stout tracing paper. Photographed diagrams are also accepted. Lettering inside the framework of the diagram should be inserted in Indian ink. Marginal lettering may, if preferred, be inserted lightly in pencil. Costs of touching-up diagrams found to be incomplete or unsuitable for line-block reproduction will be charged to authors.
- (b) Photographs intended for half-tone reproduction should be on glossy paper. They will be accepted only if found necessary by the Editors. Part of their cost may have to be borne by authors.
- (c) Colour plates will not be accepted unless authors bear the cost.

Tables should be as simple and as few as possible; if they are very large or numerous a charge may have to be made to authors. When constructing tables, it would be helpful if authors would take into account the size and shape of the pages of *Animal Production*.

Single number, 25s. or \$4.00 net.

Annual subscription, 65s. or \$11.00

There has just come out Volume II, the first publication of the

HANDBUCH DER FUTTERMITTEL

A Handbook of Feeds

In three volumes

In collaboration with

Prof. Dr. MAX BECKER, Kiel—Dr. URSULA HADELER, Kiel—Dr. HELMUT HENKEL, Kiel—Dr. WERNER KAUFMANN, Kiel—Dr. HANS KUMMER, Grötzingen—Dr. habil. KURT NAUMANN, Bonn—Prof. Dr. Dr. h. c. KURT NEHRING, Rostock—Prof. Dr. ADOLF ORTH, Kiel—Dr. KLAUS ROHR, Kiel—Prof. Dr. ADOLF STÄHLIN, Gießen—Prof. Dr. Dr. JÜRGEN TIEWS, München—Dr. HERMANN ZUCKER, München

edited by

Prof. Dr. phil. nat. MAX BECKER, Kiel, and Prof. Dr. phil. Dr. agr. h. c. KURT NEHRING, Rostock

SECOND VOLUME

Leaves and twigs—Straw, chaff and husks (screenings)—Feedingstuff from wood and cellulose—Seeds and fruits—Residues from the oil and fat industries.

1965. 495 pages with 913 tables. Full cloth binding. Price to subscribers to Volume II: 144, — DM. Subscribers, ordering Volume II are obliged to buy all three volumes. The subscription price for the whole work will no longer exist after publication of the last volume. The regular price then coming into force will be at least 10 per cent higher than the subscription price.

For several decades, i.e. since the handbook by EMIL POTT (Verlag Paul Parey, Berlin 1904-1909) is out of print, the international scientific literature has been in demand of a comprehensive source book on the whole subject of feeds. A thorough knowledge of this subject is a prerequisite for successful animal husbandry, and as the productivity and performance of the farm animals improved steadily over the past years, new methods of management and nutrition made the demand for an up-to-date book on feeds all the more critical. Whole groups of nutritive substances, still unknown or thought unimportant a few decades ago are now considered essential compounds of any feed mixture.

This new handbook takes into account the dramatic developments of the past years treating the whole subject of feeds as thoroughly as possible under the special aspects of the physiology of nutrition. It was completely rewritten by a team of experienced specialists and is intended to serve as a modern replacement of POTT'S handbook.

To retain the usefulness of the three-volume handbook as a standard source of reference for many years to come it is intended to publish supplementary volumes subject to the advances and developments expected in the field of feed science.

JOURNAL OF DAIRY SCIENCE

OFFICIAL PUBLICATION OF THE AMERICAN DAIRY SCIENCE
ASSOCIATION SINCE 1917

GEORGE H. WISE, President, North Carolina State College, Raleigh

E. O. HERREID, Editor-in-Chief, University of Illinois, Urbana

C. J. CRUSE, Acting Treasurer, Box 327, Monticello, Illinois

Shortened titles of papers published in the January issue:

C. V. MORR. Effect of Heat on Skimmilk.

CAROLYN BOATMAN. Polyunsaturated Fatty Acids in Milk Fat.

LAURA EVANS. Metabolism of Lipoproteins.

P. SHANNON. Conception Rates and Sampling Variances.

This Journal is published monthly. The annual subscription rate is \$20.00 in the United States and Canada and is \$20.50 in all other countries, post paid.

Subscriptions should be sent to the Garrard Press, 510 North Hickory Street, Champaign, Illinois.

Membership dues to the Association are \$12.50 per year, including the *Journal of Dairy Science*. Dues should be sent to C. J. Cruse, American Dairy Science Ass'n, P.O. Box 327, Monticello, Ill. 61856.

**VETERINARY ENTOMOLOGY AND ACAROLOGY
FOR INDIA**

by S. K. Sen and T. B. Fletcher

834 pp. (6¼" × 9½") 1962. 232 figs. 50 plates. 45s. (\$6.00)

This publication by the two eminent Entomologists deals with the insects, ticks and mites which are of great importance from the veterinary point of view. They have been classified to suit the needs of the veterinary workers. Bionomics, breeding techniques and measures for control of important species have been exhaustively dealt with. Exhaustive lists of reference to literature have been given at the end of each species. This truly informative book aims to meet the requirements of all categories of veterinary workers whether in field work, research or teaching.

announcing **EXPERIMENTAL AGRICULTURE**

Experimental Agriculture is a journal concerned with the whole range of agricultural problems in developing countries. It aims to provide a link between academic research and agricultural practice.

Articles include authoritative and up-to-date reviews of new developments in scientific agriculture;

accounts of new experimental techniques, especially those concerned with methods of studying the agricultural environment, the relative merits of new crops, varieties and cultural operations and the application of biometry to field experimentation;

contributions from developing countries on the specific problems of increasing agricultural production, especially where this is at present based on peasant subsistence agriculture;

papers on the more technical and economic aspects of farming systems, especially where these bear on the problems of changing an existing system;

descriptions of successful experiments in extension methods, cooperation, community projects and related topics concerned with the sociological aspects of agricultural improvements.

Experimental Agriculture is a quarterly journal published by Cambridge University Press. It is successor to *The Empire Journal of Experimental Agriculture*.

The subscription price is £3. 15s. (U.S.A. \$13.50) including postage; single parts are available at £1. 5s. each (U.S.A. \$4.50). Orders may be sent to any bookseller or subscription agent, or direct to Cambridge University Press.

NUTRITION ABSTRACTS AND REVIEWS

published by the

COMMONWEALTH BUREAU OF ANIMAL NUTRITION

Rowett Research Institute, Bucksburn, Aberdeen, Scotland

A quarterly publication bringing together in abstracts whatever is available of the world literature on human and animal nutrition in all its aspects. Each number contains a Review Article dealing with some subject of current interest.

The subscription to Volume 35, for 1965, is 150s. in countries which contribute to the Commonwealth Agricultural Bureaux, and 220s. (\$33.00) in other countries. Details may be obtained from the Secretary, Nutrition Abstracts and Reviews, at the address shown above.

CONSULTATION SERVICE

The Bureau is prepared, within the limits of its information, to answer enquiries from workers in laboratory research, field investigations or nutritional planning, but not from commercial sources, who do not themselves have access to the necessary literature.

BRITISH POULTRY SCIENCE

CONTENTS OF VOLUME 6, PART 2, APRIL 1965

- BOLTON, W. Digestion in the crop of the fowl.
 BOLTON, W. and DEWAR, W. A. The digestibility of acetic, propionic and butyric acids by the fowl.
 SQUANCE, E. and BROWN, W. O. A study of digestibility and biological value of protein in diets fed to colostomised laying pullets to determine their protein requirement.
 BROWN, W. O. and HALE, R. W. Efficiency of egg production of three types of caged layers fed diets containing maize, oats or barley as the main cereal ingredient.
 TEMPERTON, H., DUDLEY, F. J. and PICKERING, G. J. Phosphorus requirements of poultry. IV. The effects of growing pullets of feeding diets containing no animal protein or supplementary phosphorus.
 TEMPERTON, H., DUDLEY, F. J. and PICKERING, G. J. Phosphorus requirements of poultry. V. The effects during the subsequent laying year of feeding growing diets containing no animal protein or supplementary phosphorus.
 TEMPERTON, H., DUDLEY, F. J. and PICKERING, G. J. Phosphorus requirements of poultry. VI. The phosphorus requirements of growing pullets between 8 and 18 weeks of age.
 HALE, R. W. and CLAYTON, G. A. A diallel crossing experiment with two breeds of laying fowl.
 TYLER, C. and MOORE, D. The types of damage caused by various cracking and crushing methods used for measuring egg shell strength.
 SHARPE, E., MORRIS, T. R. and FOX, S. Changes in dietary protein level during pullet year
 BOOK REVIEWS.
