

SUBJECT INDEX

- Absolute magnitudes 6, 60, 541
- Advanced stages 352, 500
- Alfven waves 176
- Associations 360, 539, 543
- Asymptotic branch 413, 414
- Binaries
  - compact companions 263, 284, 583
  - eclipsing 289, 317
  - evolution 343, 502
  - frequency 269, 283, 503
  - magellanic clouds 317
  - O+O systems 257
  - WR+O systems 252, 299
  - WR+WR systems 258, 302
- Blobs 608
- C/N ratios 493
- CNO 414
- Chemical abundances
  - carbon abundance 96, 97, 113, 131, 143
  - H/He ratio 88, 92, 109, 128
  - infrared 81, 89
  - nitrogen abundance 96, 97, 113, 128
  - large magellanic cloud 90, 111
  - review 87
  - ultraviolet 91, 97, 105
  - optical 96
  - predictions from evolution models 98, 117
- Clusters 539
- Colours 58, 68, 124, 232
- Common envelopes 344, 353, 488
- Compact stars 365, 517, 577, 583, 612
- Contact systems 346
- Corona models 209
- Distribution/distances 27, 501
- 30 Doradus 545, 551
- Dust shells 63, 277
- Effective temperatures 23, 53, 494, 571
- Electron scattering optical depth 192
- Emission line galaxies 557, 569
- Emission measure 593
- Energy distributions 70, 141
- Evolutionary scenarios 15, 38, 323, 343, 406, 485, 499, 510, 518, 546, 570, 611
- Evolutionary tracks 55, 329, 331, 348, 351, 372, 373, 378, 399
- Expanding envelopes 486
- Expansion velocity 480, 489
- Fast magnetic rotator 178
- Force multiplier 187

- Galactic distribution 27, 33, 359
- Helium burning 371, 531, 557, 560
- Helium shell flash 414, 416, 421
- Helium stars 350, 378, 604, 605
- Heterogeneity 8
- Hydrogen/helium ratios 88, 92, 98, 109, 111, 117, 128
- Hot corona model 209
- H II region 469, 474, 555, 557, 559, 569, 607, 609
- Initial mass function 334
- Infrared
  - photometry 67, 231
  - recombination lines 79
  - spectra 73, 225, 237, 527
- Interferometry 305
- Internal mixing 405, 407
- Intrinsic properties 57
- Ionization structure 155
- Kappa-mechanism 605, 606
- Kick velocities 354, 367
- Ledoux criterion 379
- Line acceleration 185
- Line formation 135, 243
- Line strengths 41, 107, 279
- Luminous stars 13
- Luminosities 7, 571
- Lyman continuum luminosity 206
- Magellanic clouds
  - abundances 90, 111
  - eclipsing binary 317
  - infrared 231
  - spectra 9, 42, 106, 110
  - stellar luminosities 7
  - 30 Doradus 13, 267
- Magnetically driven winds 175
- Masses 253
- Mass loss
  - binaries 165, 343, 601
  - enhanced equatorial 243
  - infrared 168, 200
  - interaction with ISM 166, 305
  - observations review 149
  - OB star rates 156
  - radiatively driven 185
  - radio 215, 221
  - rates 12, 128, 133, 165, 200, 216, 221, 312, 344, 345, 374, 481, 555, 598
  - variations 312
- Mantles 47
- Mass transfer 343, 384
- Metallicity 508, 531, 533
- Messier 33 14

- Mixing 414
- M31 531
- Non-conservative evolution 347, 365, 397
- OB runaways 353
- ON stars 393
- Open clusters 542
- Overshooting 323, 330, 406
- O VI objects 457
- Photometry 63, 67, 215, 221
- Photon creation 192
- Photospheres 47, 203
- Planetary nebulae 413, 423, 431, 453, 457
- Radii 53
- Radio observations 63, 215, 221
- Recombination lines 79
- Ring nebulae 305, 380, 463, 469, 479, 485, 606, 607
- Roche lobe overflow 343, 344, 473, 577
- Rotation 608
- Runaway stars 263, 354
- Schwarzschild criterion 357, 378
- Semiconvection 330
- Simultaneous evolution 350
- Snow plow model 486
- Sobolev models 93, 114, 131
- Spectra
  - infrared 73, 225, 237
  - optical 110, 295
  - ultraviolet 105, 140, 277, 311
- Spectrophotometry 121
- Stellar winds
  - interaction with ISM 166, 305, 556
  - observations review 149, 345
  - velocity laws 152, 163
- Stellar wind theories/models
  - enhanced equatorial mass loss 243
  - hot corona model 209
  - ionization structures 155
  - magnetically driven winds 175
  - multiple scattering 174, 206
  - radiatively driven winds 185
  - review 173
  - wind driven shells 556
  - wind bubbles 606
- Supergiants 371
- Supermassive stars 563
- Supernova 352, 355, 365
- Synthetic spectra 135
- Terminal velocities
  - OB stars 149
  - WR stars 160
- Thermal pulses 415

- Thermal runaway 418, 419  
Thermalization depth 192  
Thermohaline mixing 350, 399  
Thermonuclear runaway 606  
Tololo 3, 569  
Transition objects 383, 525  
Variability  
    optical 289, 295  
    radio 63  
    ultraviolet 311  
Velocity dispersion 482  
Velocity field 607  
Velocity gradients 161  
Velocity laws 152, 163, 245  
Wolf-Rayet  
    binaries 251, 283, 299, 317, 343, 406, 515, 552, 583, 610  
    chemical abundances 87, 105, 109, 113, 117, 127, 131, 139  
    clusters 539  
    compact companions 263, 284  
    connection with O, Of stars 217  
    detection 532  
    30 Doradus 545, 551  
    effective temperatures 23, 53, 325  
    galactic distribution 27, 325  
    giant regions of star formation 559  
    intrinsic colours 541  
    intrinsic properties 47, 57, 203  
    low mass 413  
    luminosities 325  
    magellanic clouds 317, 231, 515, 523, 527  
    magnitudes 523, 540  
    masses 253, 325, 349  
    mass loss 203, 215, 221, 243  
    M31 531  
    number of WR stars 380, 406  
    phenomenon 3, 500, 597  
    photometry 63, 67, 215, 221  
    progenitors 500, 505  
    ring nebulae 305  
    runaways 354, 521  
    spectra 41, 73, 79, 121, 225, 237, 249, 311  
    transition stars 9, 11  
    velocity laws 163  
    WO Wolf-Rayet stars 387  
    WR+WR binaries 258, 403  
    X-rays of WR stars 589  
X-ray luminosity 590, 591  
X-rays 578, 579, 589  
Zanstra analyses 24, 423  
Zanstra temperature 433, 435, 454  
z-distribution 34
