

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (robotica@cambridge.org) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **40** Part **7** July **2022**

Design of sensing system for experimental modeling of soft actuator applied for finger rehabilitation Shokoufeh Davarzani, Mohammad Ali Ahmadi-Pajouh and Hamed Ghafarirad	2091
Toward safe and high-performance human-robot collaboration via implementation of redundancy and understanding the effects of admittance term parameters Mert Kanik, Orhan Ayit, Mehmet Ismet Can Dede and Enver Tatlicioglu	2112
Autonomous aerial flight path inspection using advanced manufacturing techniques Mousumi Rizia, Julio A. Reyes-Munoz, Angel G. Ortega, Ahsan Choudhuri and Angel Flores-Abad	2128
Conceptual design and error analysis of a cable-driven parallel robot Jiaxuan Li, Yongjie Zhao, Qingqiong Tang, Wei Sun, Feifei Yuan and Xinjian Lu	2152
Rigid-flexible coupling dynamics analysis with joint clearance for a 5-DOF hybrid polishing robot Feng Guo, Gang Cheng, Shilin Wang and Jun Li	2168
A model-free deep reinforcement learning approach for control of exoskeleton gait patterns Lowell Rose, Michael C. F. Bazzocchi and Goldie Nejat	2189
Dynamic logarithmic state and control quantization for continuous-time linear systems Jiashuo Wang, Shuo Pan and Zhiyu Xi	2215
A new gap-based obstacle avoidance approach: follow the obstacle circle method Hosein Houshyari and Volkan Sezer	2231
Mechatronics design of self-adaptive under-actuated climbing robot for pole climbing and ground moving Yuwang Liu, Yi Yu, Dongqi Wang, Sheng Yang and Jinguo Liu	2255
An improved inverse kinematics solution for 6-DOF robot manipulators with offset wrists Xing Zhou, Yaoqi Xian, Yuanhao Chen, Tongshu Chen, Lin Yang, Simin Chen and Jian Huang	2275
An observer-based output tracking controller for electrically driven cooperative multiple manipulators with adaptive Bernstein-type approximator Alireza Izadbakhsh	2295
People search via deep compressed sensing techniques Bing-Xian Lu, Yu-Chung Tsai and Kuo-Shih Tseng	2320
Design and integration of a drone based passive manipulator for capturing flying targets B. V. Vidyadhara, Lima Agnel Tony, Mohitvishnu S. Gadde, Shuvrangshu Jana, V. P. Varun, Aashay Anil Bhise, Suresh Sundaram and Debasish Ghose	2349
Robust control of robot manipulators with an adaptive fuzzy unmodelled parameter estimation law Recep Burkan and Askin Mutlu	2365
Sparse point-plane odometry in structured environments Tianpei Lin, Feng Pan and Xuanyin Wang	2381
Rapid and safe wire tension distribution scheme for redundant cable-driven parallel manipulators Mohammad Reza Mousavi, Masoud Ghanbari, S. Ali A. Moosavian and Payam Zarafshan	2395
Vectorial parameterizations of pose Timothy D. Barfoot, James R. Forbes and Gabriele M. T. D'Eleuterio	2409
Stabilization and tracking control of an x-z type inverted pendulum system using Lightning Search Algorithm tuned nonlinear PID controller Nurhan Gürsel Özmen and Musa Marul	2428
Application of 3D face recognition in the access control system Quoc Dien Le, Tran Thanh Cong Vu and Tuong Quan Vo	2449
Design, modeling, and testing of a soft actuator with variable stiffness using granular jamming Junfeng Hu, Long Liang and Bin Zeng	2468
A new bionic hydraulic actuator system for legged robots with impact buffering, impact energy absorption, impact energy storage, and force burst Jiaqi Li, Dacheng Cong, Yu Yang and Zhidong Yang	2485
Design, modeling, and testing of a soft actuator with variable stiffness using granular jamming - ERRATUM Junfeng Hu, Long Liang and Bin Zeng	2503

Robotica now accepts submissions via Manuscript Central
