

PREHOSPITAL and DISASTER MEDICINE

Volume 5, Number 1

January-March 1990

Job Satisfaction in EMS: A Different Approach
EMT-P Medications Used by the Baltimore County Fire Department
Administrative Support of EMS Medical Directors: A Profile
The Role of the Physician in a Helicopter EMS System
Saliva Alcohol Reagent Strips in Altered Response Protocols

The Need for a Prehospital DNR System
Withholding CPR in the Prehospital Setting

Current Controversies in Prehospital Resuscitation of the
Terminally Ill Patient

Priorities in Medical Responses to Disasters

Regulating the Scope of EMS Services

Abstracts of Selected Papers Presented at the Emergency
and Disaster Medicine Collaborating Symposium of the
6th World Congress on Emergency and Disaster Medicine

The Official Journal of the
National Association of EMS Physicians and the
World Association for Emergency and Disaster Medicine
in association with the
Acute Care Foundation

"The Neck Collar, Scoop Stretcher and Vacuum Mattress are Essential for Rescue."*

EVAC-U-SPLINT® The Complete Immobilization System

EVAC-U-SPLINT is an internationally recognized, orthopedic vacuum immobilization system. The EVAC-U-SPLINT System is designed to provide emergency medical services personnel with the flexibility needed in meeting everyday, often difficult, field situations.

The EVAC-U-SPLINT System, in addition to its extremity splints, features a unique mattress. The EVAC-U-SPLINT Mattress provides patient immobilization by combining vacuum technology with conventional rigid supports that custom fit the patient with each application.

The EVAC-U-SPLINT System contours, cradles, and immobilizes the patient in comfort and safety from the scene throughout definitive care.

EVAC-U-SPLINT Mattress patent pending

Service makes the difference

Coping with emergencies is very demanding. You need to take control and be prepared. What better way to do this than with Aero Products.

In business for over 10 years, we know how to provide our customers with the best quality products to handle emergency situations. Many EMS professionals have chosen us because of the service we provide and the quality of our products.

Don't hesitate, call us now and expect the best.

Distributor of leading medical manufacturers nationwide:

**INTRODUCING
THE AUTO VENT 2000**

**WE'VE PAID ATTENTION TO
YOUR NEEDS SO THAT YOU CAN
PAY ATTENTION TO THE PATIENT.**

Need.

We can't emphasize the word enough. You see we've based our design criteria for the Auto Vent 2000 around needs. Those of the operator. And those of the patient.

The result is a lightweight, compact ventilator/resuscitator perfectly engineered to meet the needs of emergency and transport ventilation.

**THE NEED FOR DEPENDABILITY
AND DURABILITY**

Chances are, you've been using the field-proven LSP Demand Valve for years. It's just part of the Auto Vent's rugged features. Features like state-of-the-art pneumatics for accurate, consistent operation and a high impact case that protects the modular assembly. Shock absorbing bumpers cushion the unit from unusual emergency medical service use.

The fact is, Auto Vent 2000 meets or exceeds all ASTM and American Heart Association standards for resuscitators.

THE NEED FOR SIMPLICITY

Assembly is fast, simple. Because it operates on standard regulated source gas, the setting of two independent adjustments for rate and flow free the operator to concentrate on the patient.

THE PATIENTS NEEDS

The valve lets the patient draw supplemental gas on demand and is equipped with an inspiratory relief valve that sounds an audible alarm. There's even a visual indicator for inspiration. With the Auto Vent 2000, the patient gets all the attention.

WHAT YOU NEED TO DO

Just contact us for a detailed brochure on the Auto Vent 2000 and the distributor nearest you and we'll get back to you. Automatically.

One Mauchly Drive, Irvine, California, 92718

The Auto Vent 2000; Operates from standard regulated 50 psi gas source, Tidal Volumes - 400-1200 ml., Operating Temperature - 30 to 125F, Audible Alarm when inspiratory pressure meets or exceeds 45cm H2O.
