

ANGOT, Professor CHARLES ALFRED, whose death occurred at Paris on 16th March 1924, was born in that city in 1848. He joined the *Bureau Central Météorologique de France* in 1879, succeeded to the Directorship on the death of Mascart in 1907, and retired with the title of *Directeur Honoraire* in 1920. Throughout his official career he held the position of Professor of Physics and Meteorology in the Institute Agronomique National.

Angot's long and industrious life made the realm of meteorology richer in at least three different directions. Thus the *Annales du Bureau Central Météorologique* contain various elaborate memoirs by him which are of permanent value to the professional student. His discussions of the diurnal variation of pressure and of the Eiffel Tower observations may be instanced; as also his studies of the Climate of France and his Magnetic Charts of that country. Again, with an admirable style, and written out of the fulness of knowledge, Angot in his *Traité Élémentaire de Météorologie* succeeded in the difficult task of writing a good, popular text-book; whilst his treatise on "The Aurora Borealis" in the International Scientific Series falls into the same class. And recalling that France, under the enthusiastic leadership of Le Verrier, was some sixty years ago the pioneer of international co-operation in meteorology, with its daily *carte internationale*, it is but appropriate to find that Angot was a conspicuous figure on the International Meteorological Committee. In particular, he was latterly President of the subsidiary Commissions for Agricultural Meteorology and for Terrestrial Magnetism and Atmospheric Electricity.

Professor Angot was elected an Honorary Fellow of this Society in 1923. He was also an Honorary Member of the Royal Academy of Sciences of Sweden.

CAMPBELL, CHARLES DUFF, was a distinguished linguist and etymologist, possessing a wonderful acquaintance with the languages of Europe, ancient and modern. He could talk fluently in French, German, Spanish, and Italian, and was invariably willing to place his knowledge at the disposal of an inquirer. Mr Campbell was educated at the Edinburgh Institution, and was for a long period an Examiner in Modern Languages for the Scottish Universities, being recognised as one of the highest authorities in the teaching profession. For many years he was Secretary to Archibald Campbell, Hope & King, Ltd., Brewers, Edinburgh. Mr Campbell was never married, but devoted his life to the education and advancement of his nephews and nieces. (One of his nephews was Dr Harry Norman, the famous Sanskrit scholar, who was accidentally shot in
