

CAMBRIDGE

## Noteworthy New Titles from Cambridge!

### A Course in Model Theory

Katrin Tent *and*  
Martin Ziegler

*Lecture Notes in Logic*

\$60.00: Hb: 978-0-521-76324-0: 258 pp.

### Malliavin Calculus for Lévy Processes and Infinite-Dimensional Brownian Motion

Horst Osswald

*Cambridge Tracts in Mathematics*

\$110.00: Hb: 978-1-107-01614-9: 428 pp.

### Finite Ordered Sets

Concepts, Results and Uses

Nathalie Caspard,  
Bruno Leclerc, *and*  
Bernard Monjardet

*Encyclopedia of Mathematics and its Applications*

\$90.00: Hb: 978-1-107-01369-8: 350 pp.

### Proofs and Computations

Helmut Schwichtenberg *and*  
Stanley S. Wainer

*Perspectives in Logic*

\$90.00: Hb: 978-0-521-51769-0: 480 pp.

### Homotopy Theory of Higher Categories

From Segal Categories to  
*n*-Categories and Beyond

Carlos Simpson

*New Mathematical Monographs*

\$105.00: Hb: 978-0-521-51695-2: 652 pp.

### A Guide to Experimental Algorithmics

Catherine C. McGeoch

\$99.00: Hb: 978-1-107-00173-2: 272 pp.

\$39.99: Pb: 978-0-521-17301-8

### Wadge Degrees and Projective Ordinals

The Cabal Seminar Volume II

*Edited by* Alexander S. Kechris,  
Benedikt Löwe, *and*  
John R. Steel

*Lecture Notes in Logic*

\$75.00: Hb: 978-0-521-76203-8: 548 pp.

*New in Paperback!*

### Concentration of Measure for the Analysis of Randomized Algorithms

Devdatt P. Dubhashi *and*  
Alessandro Panconesi

\$34.99: Pb: 978-1-107-60660-9: 216 pp.

*New in Paperback!*

### Nonmonotonic Reasoning

Logical Foundations of Commonsense

Gerhard Brewka

*Cambridge Tracts in*

*Theoretical Computer Science*

\$39.99: Pb: 978-0-521-18130-3: 184 pp.

Prices subject to change.

## Instructions for contributors

### Editorial policy

*Mathematical Structures in Computer Science (MSCS)* is a journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from logic, algebra, geometry, category theory or other areas of logic and mathematics form a basis for the work. The journal also welcomes applications to computing based on the use of specific mathematical structures (e.g. topological and order-theoretic structures) as well as on proof-theoretic notions or results. In addition, it is interested in contributions in new interdisciplinary fields bridging computer science, quantum physics, mathematics and information theory. In particular, papers on mathematical formalisms for quantum computation, quantum information processing and communication will be considered.

The journal will also consider papers on computational modelling of epigenetic phenomena, protein-protein interactions, stochasticity in molecular cascades. Mathematical approaches to System Biology will be welcomed, within the broad framework of post-genomic views of embryogenesis and evolution.

The purpose of the journal is to increase the circulation of new very high standard results in fast growing areas which are currently influencing various aspects of actual computing. Indeed, this journal is not meant to be only a 'theory journal' but, by choosing as a theme the use of mathematical methods of Computer Science independently of their area of application, it aims to highlight connections among different topics and to encourage applications of theoretical contributions.

In order to promote the use of mathematical methods in computer science, expository and introductory papers are welcome, provided that there is a clear connection to computational issues or they investigate mathematical structures whose relevance to computer science is well established. However, these contributions should be directed to the broad audience of computer scientists to which this journal is addressed. Equally, discussions of a methodological or philosophical nature concerning the foundation of Computer Science are of interest for the journal.

### Submission of manuscripts

Papers may be submitted to any member of the Editorial Board. A file .pdf should be sent accompanied by the author's address, telephone and fax number, and e-mail address.

A copy of the paper together with the name of the editor chosen should also be sent to the Editor-in-Chief who will record the submission.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The publisher encourages submission of papers written in LaTeX using the *MSCS* LaTeX style file. The LaTeX 2.09 style file *mcs.sty* together with a guide to its use *mcsguide.tex*, or the corresponding LaTeX 2e file *mcs.cls* are available via anonymous ftp from the Cambridge University Press site at <ftp.cup.cam.ac.uk> in the directories `/pub/texarchive/journals/latex/mcs-sty` or `/pub/texarchive/journals/latex/mcs-cls`. In the directory `/pub/texarchive/journals/latex/mcs-sty` you will find a concatenated file called *mcs.all*. This file contains *readme.txt*, *mcs.sty* and *mcsguid.tex*. If you Tex *mcsguid.tex* you will get a full set of instructions for using the style file. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact [texsupport@techbooks.com](mailto:texsupport@techbooks.com). While use of the *MSCS* LaTeX style file is preferred, ordinary LaTeX or plain TeX files can also be accepted.

**On final acceptance of their paper**, authors should make accessible to the Editor-in-Chief (downloadable) the LaTeX source code including all figures (line figures only), a file .pdf and author-defined macro and style files, together with a hard copy produced using the same file. Discs should be in Apple Mac or PC format and will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

### Layout of manuscripts

Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 300 words and should end with a brief concluding section.

### Illustrations

Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions should be attached separately.

### References

The Harvard system of references should be used. In the text, a reference should be quoted by the author's name and date in parentheses, in date order, e.g. (Smith 1983; Jones and Jones 1985; Hunter 1986a,b). Where there are three or more authors, the first name followed by et al. should be used. A full list of references should be given at the end of the main text, listing, in alphabetical order, surname of author and initials; year of publication (in parentheses); article title; journal name abbreviated in accordance with the *World List of Scientific Periodicals* (4th edn); volume number; inclusive page numbers. For books and conference proceedings, place of publication and publisher (and Editor(s) if appropriate) should be included.

### Proof Reading

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

### Offprints

Extra offprints may be purchased from the publisher if ordered at proof stage.

## CONTENTS

- The small-community phenomenon in networks 373  
ANGSHENG LI AND PAN PENG
- A coding theoretic study of MLL proof nets 409  
SATOSHI MATSUOKA
- What is a categorical model of the differential and the resource  $\lambda$ -calculi? 451  
GIULIO MANZONETTO
- Spatial quantum search in a triangular network 521  
G. ABAL, R. DONANGELO, M. FORETS AND R. PORTUGAL
- Formalising PFSQL queries using  $\mathbb{L}\Pi_{\frac{1}{2}}$  fuzzy logic 533  
ALEKSANDAR PEROVIĆ, ALEKSANDAR TAKAČI AND SRDJAN ŠKRBIĆ
