

MICROSCOPY TODAY

OCTOBER 1996

ISSUE #96-8

High Tech • Low Price

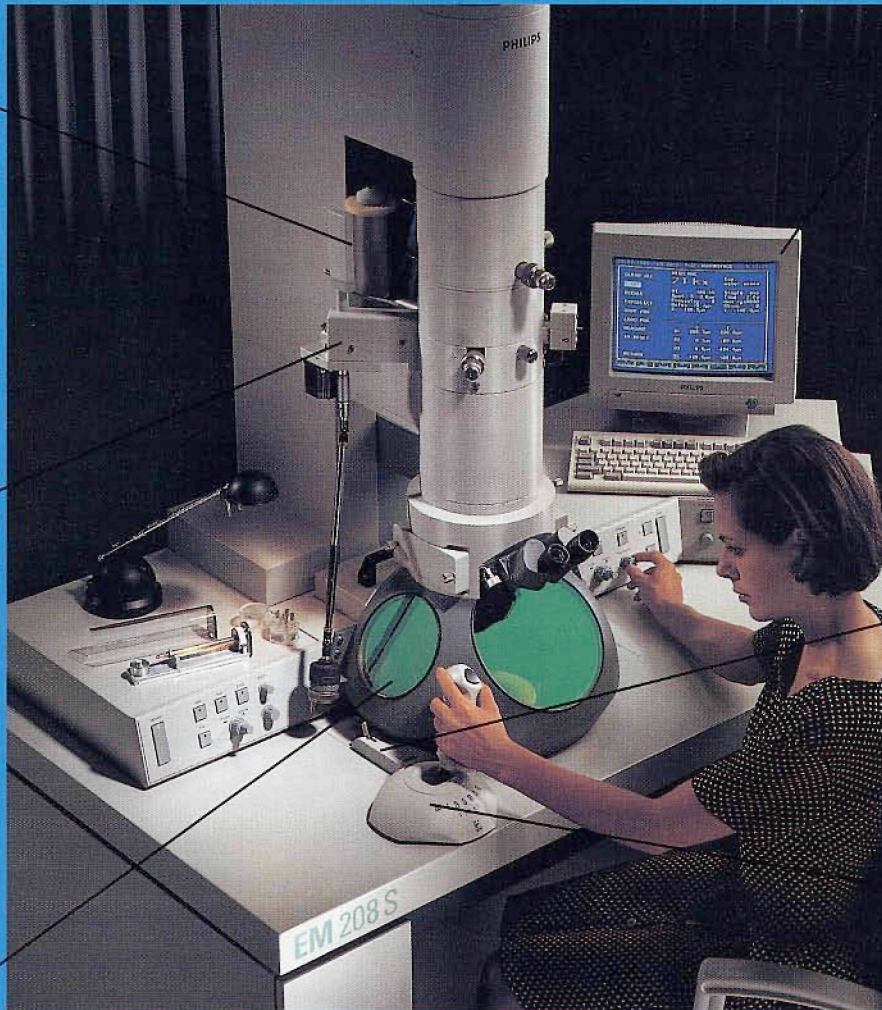

cold trap

motor driven stage

side window

colour monitor

motorized screen lift

joystick operation

High tech, low price. We've already proven this with our EM208 TEM. Now, our enhanced EM208S does it again. In addition to the high-tech qualities of its predecessor, i.e., Philips EM column technology, high image quality and exceptional ease of use, the new EM208S features: fully motorized specimen stage, motorized screen lift, joystick operation, cold

trap, side window and colour monitor. Yet the EM208S is probably the lowest priced TEM of its type on the market for life science applications. For more information, contact:
